It gives me great pleasure to introduce to this committee the Secretary of State of the State of Minnesota, Joan Anderson Growe. Secretary Growe is the chief election official of Minnesota and has served our State enthusiastically and creatively in that position since 1975. Minnesota's election day registration, postcard registration, and voter outreach programs were largely implemented under her leadership. She will testify as to what actually does happen when such laws are passed. She can tell you which of the concerns about these laws are based on fact and which are only imagined.

It is appropriate that our Secretary of State is here to testify on this bill. It is not an exaggeration to claim that Minnesota is in part responsible for this proposal being here. This is the case both because Minnesota did it first, and because Vice-President Mondale is a forceful advocate of the program.

There have always been a number of States that have refrained from putting bureaucratic barriers in the path of a citizen's right to vote. But these States have mainly been rural States. Minnesota was the first State with a major urban area to remove artificial roadblocks to the right to vote.

In 1973 and 1974 Minnesota reformed its election laws to keep our democratic system healthy. In that year we established a tough code of ethics for candidates and office holders, required disclosure of contributions, established a dollar check-off to publicly finance State election campaigns, required automatic recounts in close elections, and provided for removal of artificial barriers to voting through postcard registration and election day registration.

The voter registration reforms were a high priority for me as governor. I recommended them strongly to the legislature. Secretary Growe was then serving as a member of the State House of Representatives. Both she and I assure this committee that every change that could be made regarding election day registration was made in 1973 in Minnesota. Predictions of administrative chaos, massive fraud, and total confusion at the polls—we heard it all.

These predictions were not accepted by the legislature. The election reforms were passed in Minnesota in 1973. The predictions of chaos, fraud and confusion did not come true as Joan Growe will detail to you. However, besides presiding over the implementation of these laws, she also has initiated an active outreach program to inform citizens of the new laws and to educate election officials on the correct administration of them.

The results of the Minnesota experience with election day rgistration are gratifying to those of us who backed the new laws. As with any change in the law there were difficulties and administrative errors. But there was no chaos.

And what of possible fraud committed under the new laws? Because of the predictions of fraud, a number of Minnesota journalists looked closely at the implementation of the new election statutes. Several unsuccessful candidates, and their lawyers looked even closer at the State and local elections that have occurred since 1973. But the media has uncovered no stories, and the candidates found no cases to pursue. Occasional errors there were, but no deliberate fraud. No doubt someday there will be a case of fraud. There were cases under the prior registration system. But, I do not see that such cases will be any more common under our new system than under our old.

A few years ago Neil Pierce in one of his fine books on State political systems subtitled a chapter on Minnesota as "The State That Works". I, and all Minnesotans, take pride in the judgment that in Minnesota, democracy works the way it is supposed to work.

But you must remember that Minnesotans are not a population of virtuous statesmen. We are ordinary Americans. What we have done in Minnesota is simply try very hard to allow ordinary Americans to exercise their ability to govern themselves. We know that there is no greater danger to the legitimacy of democratic government than the discouragement of large numbers of our citizens from exercising the basic democratic right of choosing who shall govern them.

In Minnesota we do not believe jumping through procedural hoops makes for good government. In Minnesota it is easy to vote. It is easy to run for public office. It is easy to get involved in either major political party, or our dozen minor parties. It is easy for citizens to get something done. Because it is easy for citizens to govern themselves, the democratic political system of Minnesota does, indeed, work.

I am pleased to present to this Committee Secretary Growe whose own work has helped tremendously in making Minnesota work. I know you will be most interested in her firsthand experience on how the system envisioned nationwide in S. 1072, that I am pleased to cosponsor, has worked in Minnesota.

TESTIMONY BY JOAN ANDERSON GROWE, SECRETARY OF STATE, STATE OF MINNESOTA

Good morning. My name is Joan Anderson Growe, and I'm the elected Secretary of State and chief elections official for Minnesota. I am here today to share with you the Minnesota story. Our goal has been to increase participation, to make the elections process accessible to everyone and maintain safeguards in the system. We feel that we have been successful.

Minnesota has been successful, not because we are measurably different from any other State, but because, at all levels of government, our people feel that their participation in the process produces results.

We feel that way because we have excellent leadership in Minnesota. Our public officials of all political persuasions inspire confidence in the electorate.

I feel that same sort of leadership is now being given to the Nation, by this administration and by this Congress. I believe the citizens of the United States will respond to that leadership, and that is why I am convinced that universal voter registration will work nationally, just as it has in Minnesota.

Let me tell you about Minnesota's experience.

In recent years under the leadership of then Governor Wendell Anderson, the Minnesota legislature has enacted into law, a wide variety of measures which reinforce the goals and philosophy that I mentioned a moment ago, namely, participation of as many people as possible in the system. There has been legislation requiring open meetings, providing for public financing of legislative candidates and creating a State ethical practices board. The declining voter turnout in recent years led the Minnesota legislature in 1973, to pass a comprehensive voter registration program. Like many other States, Minnesota historically had not required advance registration in large portions of our rural counties. Citizens in those areas of the State traditionally have been able to go to the polls on election day and after identifying themselves as a local resident, they were allowed to vote. In 1973, the Minnesota legislature, concerned as always with open and honest election procedures, enacted legislation allowing Minnesota voters in those portions of the State which required advance registration, our major metropolitan areas, to have the same privileges as those voters in more rural areas, voting on election day without having registered in advance.

At the same time, a system of permanent registration was established throughout the State. This involved a uniform system of maintaining voter registration files at the local level and permitted voters to register in advance of elections on postcards, which they fill out and mail to the county auditor or the city clerk. These cards, available at county and municipal offices, are also distributed by candidates and civic organizations.

A major part of the registration program is election day registration.

I'd like to describe to you how it works.

If people have neglected to register because they have changed their address, have changed their name, or simply forgotten, they may present themselves at the polling place on election day and show an election judge the proper identification. At that time, the election judge will allow them to register and vote. We allow five kinds of identification:

1. Minnesota driver's license;

2. A Minnesota State-issued identification card, which we call a nonqualification certifi-

cate which is issued to people who don't drive;

3. A form we call notice of incomplete registration which is mailed from the registration office;

4. A registration in the same precinct, but at a different address, for the same person;

5. And by having another registered voter in the same precinct vouch for the voter who is registering.

In Minnesota, there are an average of four people working at each polling place. These election judges take an oath on that day and are paid for their work. It is the normal procedure in our precincts for one of the election judges to be responsible for election day voter registration. Another judge compares the signature on the voter registration card with a voter certificate signed by each voter before being allowed to vote.

The cards of those voters who registered on election day will be placed in the permanent file with those cards of the pre-registered voters. A non-forwardable card will be mailed to the registrant by the county auditor or city clerk.

We believe that this system is working in Minnesota. People are responding as the legislature had expected they would.

Certainly, as with any legislation, a valid question is: How is this law administered? I made working with local elections administrators a top priority. My office held a series of informational meetings throughout the state for city clerks, township officers, election judges, and county auditors, who are the chief election officials at the local level.

My office prepared an election judges guide and produced a 30 minute television program describing the activities that take place on election day to assist judges.

From our past experiences, we know that there was congestion at some of the polling places. Therefore, for the 1976 election, we recommended that there be two clearly designated lines; one for those people who are simply coming in to vote, and the other for those registering and voting.

We recommended that ample supplies be available at the polling place for those who wanted to register and vote.

We also highly recommended that precinct maps be available for each precinct on election day so that the judge could determine where each person lived, and if he or she was in the correct polling place.

Posters were placed in every polling place listing the five types of identification.

In addition to this, public service announcements through all the media and informational brochures distributed through civic organizations, and the political parties, gave voters in the state the information they needed about procedures and deadlines for voting and registration.

Samples of these materials are included in the booklets that have been distributed.

The question has also been raised concerning opportunities for intentional fraud under the new system.

I know there has been discussion about an election for the State legislature in a college community in Minnesota. This election was contested in the court because a challenger vouched for the residency of many student voters in his precinct. Our rules forbid challengers from vouching.

The candidate who lost contested the election but in the court ruling, it was found that there was no evidence of fraud and the election results were valid.

Since initiating election day registration in 1973, there have been no cases of fraud under this law.

Another comment I often hear is that election day registration will bring more Democrats into the polling places than Republicans. We do not find this to be true. The difference that we see is between the rural and urban areas of the State. Consistently, a higher percentage of voters in rural congressional districts register on election day than do voters in our urban areas.

In the April 29, 1977 edition of the *St. Paul Dispatch*, an article quoting the Independent-Republican chair of Minnesota says, "Some conservatives who criticize 'easy registration' are mistaken about which party's candidates benefit from the Minnesota system. 'Our analysis leads us to believe that President Ford got 60 per cent of the vote from those who registered on election day. We can't convince some of our State legislators, though. They think they were beaten by it even though I don't see any evidence to support them."

I had made voter participation a special project and goal for my office. Special efforts were made through a nonpartisan, nonprofit citizenship fund to involve community and government, business and labor, in an effort to persuade Minnesota voters to "register, inform themselves and vote". We feel that this voter information project made substantial contributions to reversing a downward trend in voter participation.

We conveyed our message through the media, radio, television, and newspapers. Television personalities taped our message with interesting variations. These public service messages had, I believe, a great impact, and contributed to public awareness of the importance of voting.

The same message, without "Vote '76" logo, was also sent out in flyer-form by a large Minneapolis bank in their monthly statements.

This citizenship fund also made possible a voter hot-line, to tell voters the location of their polling place. Again, the media publicized the number the voters were to call for instructions on how to register and where to vote.

Another project which had some impact on voter turnout was our "votingest" contest. Civic pride and competition were stimulated by this contest and record numbers of voters registered and voted. Many cities in Minnesota, in fact, won the national "votingest" contest for municipalities.

I'm pleased the Congress has recognized the necessity of an outreach program of this type for the universal Federal election day legislation. The funds that you are providing will allow every State to best determine how to take the message to its own citizens. You, the Congress, could pass the most progressive registration system for the country, but if citizens are not aware of it, and do not know how to take advantage of it, then the full impact will not be felt.

In Minnesota, our results have definitely shown that an effort to inform and educate voters is a necessary part of our program.

In 1952, our statistics indicate that 83% of the eligible voters in Minnesota went to the polls. By 1972, this participation had declined to 69%.

Many reasons for the national trend of declining voter participation have been delineated. Certainly, over the last 20 or 30 years, our society has become more mobile, and large percentages of our population move regularly to new residences on short notice. Election day registration recognizes this trend. And our participation has been good.

Minnesota turnout in 1976, a national election year, was 1.9 million voters, or over 75% of our eligible voters, making Minnesota the votingest State in the Union. 454,000 of these voters, or almost 23%, registered on election day.

In summary then, our goal in Minnesota has always been to have an elections process that is open and accessible to all eligible voters, but maintains the necessary safeguards so the public has confidence in the process and the government they elect.

We have a successful program because we have:

1. Voter information programs.
2. Training of local election officials to make sure that the system we have developed works.
3. Election day registration, and of course the most important by product of an open and honest system.
4. Confidence in Government.

I heartily applaud your efforts to develop a universal voter registration program. In Minnesota, we have found that the program works on an administrative level, and in achieving our goals of voter participation.

I believe that what can and has worked in Minnesota, can and should work for the Nation.

[From the St. Paul Dispatch, Mar. 22, 1977]

ASKING FOR TROUBLE

Maybe the folks down in Plains, Ga., would never think of stuffing a ballot box, but the amendment to the federal voting law that President Carter is proposing would throw the system wide open to people who would.

Mr. Carter wants Congress to approve an amendment that would eliminate voter registration and permit any eligible citizen to vote for federal candidates if he went to the polls on election day with an identification card bearing his name, address and age.

The President thinks that this would help 45 million more American citizens to participate in the 1980 presidential and congressional elections. Either his naivete runs deeper than anyone suspected or he has been misled.

There might be 45 million more votes cast, but they wouldn't come from 45 million more voters.

Since the repeal of the poll tax and the passage of the Civil Rights Act, any American who has the desire to vote has been able to do so. Of the estimated 146 million people who were eligible to vote in the 1976 presidential election, 99 million made the minimal effort needed to register and 83 million actually voted.

There are millions of Americans who would not vote if they were transported to the polls in their sleep and asked only to open their eyes long enough to pull the handle on the voting machine. And there is no reason that they should vote, given their disinterest in and lack of knowledge of the whole election procedure.

But there also are other Americans who would vote several times for any candidate whose supporters offered sufficient motivation. This has been difficult to police in such sophisticated centers as Illinois and New Jersey under the registration system. It would be impossible under the wide-open system proposed by the President.

The White House proposal is modeled after a looney law which is in effect in Minnesota. That permits people to vote without presenting any identification, providing they are vouched for by someone already registered in the same precinct. That feature was abused in the 1976 general election. In Mankato, for example, one person who vouched for dozens of others later admitted that he didn't know many of them.

Congress should withdraw Mr. Carter's invitation to voter fraud.

To the editor:

Your March 22 editorial on election day registration is disappointing. More than 20 percent of the voters of the state of Minnesota exercised their right to vote last November by registering on election day. They made Minnesota the leader in voter turn-out during the 1976 election period. Your allegation that people who would use election day registration are uninterested or lack knowledge in the election process is refuted by their very act of going to the polls to vote.

People who don't know, or don't care, about elections would not make the effort to vote.

Voting is a right, it is not a privilege to be earned by jumping through procedural hoops. Cumbersome registration requirements are not a legitimate test of fitness to vote. Even the seemingly uninterested or the unschooled have a right to vote in a democracy. It is the obligation of democratic government to encourage them to participate and not to devise areas to this basic right.

Your points about possible fraud are refuted both by the experience in Minnesota and by the history of voter registration in America. After a thorough investigation of the recent Mankato case involving election day registration Judge John Fitzgerald did not find any cause for judicial reversal of the election results nor has any other investigation in Minnesota turned up fraud in election day registration.

WENDELL R. ANDERSON,
U.S. Senator.

SENATOR HARRISON H. SCHMITT: A NEW VIEW OF EARTH

Mr. PERCY. Mr. President, our distinguished colleague from New Mexico (Mr. SCHMITT) on February 8, 1974, gave an address entitled "A New View of Earth," based on his observations of the Earth from his space capsule. These observations were made, of course, before he joined us in the Senate and when he served as part of the U.S. space program, but they are nonetheless as fresh and incisive today as they were then. Because I think so many would benefit from reading it, I ask unanimous consent that his challenging address of his colleagues who have since observed first hand the depth of his thinking given at Pepperdine University, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW VIEW OF EARTH

(By Dr. Harrison H. Schmitt, Apollo 17 astronaut)

May I offer my sincere congratulations to Mr. Strong, Dr. Hutchinson and Dr. Haagen-Smit. I and the men and women of NASA deeply appreciate all you have done and will do to preserve and enhance the earth it has been our privilege to serve. On the second night that I spent on my way to the Valley of Taurus-Littrow on the moon, I took one more glance at home before covering the windows for sleep. My feeling then was "if there ever was a fragile-appearing piece of blue in space, it's the earth right now." Let me tell you more about our generation's new view of earth.

The Apollo explorations we have watched and lived were man's first halting, but clearly personal look at his universe. Our unique character among the living species of nature is carried forward in many ways. One outward reflection of this character is that we have had the audacity to try to understand our place in this universe and in its future. We have had the further audacity to try to use that understanding to alter the universe and to more fully understand the earth using in large measure the corrected vision from space.

Like our childhood's home, we really see the earth only as we prepare to leave it. First, there are the basically familiar, though expanded views of earth from the now well-traveled orbits: banded sunrises and sunsets changing in a few seconds from black to purple to red to yellow to searing daylight and then back in never-ending progression; tinted oceans and continents with structural patterns wrought by aging during four-and-one-half billion years of time; shadowed clouds and snows ever-varying in their mysteries and beauty; and the warm fields of lights by night and of homes by day created by men but now seen without the boundaries in their minds.

But then, as we leave what is familiar, the strange new perspective is that of the earth filling only one window and gradually, not even doing that. The disquieting thought is that it is no longer the earth of our past. It is only a fragile blue globe in space.

There is no apparent purpose in the cyclic wandering of our ship THE EARTH through its own universal sea. The forces that hold us to this invisible course have been long explained but never understood. There are waves that we do not feel, there are storms we cannot see, and there is history we have not read. Only the hope of continuity has always been reality during our voyage around the sun and through the galaxy.

Again, like childhood's home which we now only visit, changing in time but unchanged in the mind, we see the full earth revolve beneath us. All the tracks of man's earlier greatness and folly are displayed in our window in the course of a single day The Roman world, the explorers' paths around the continents, the trails across old frontiers, and the migrations of peoples are accented in their significance by our own act of seeing.

Then, with some of the disappointment felt as loved ones age, we see the gradual change with each revolution as the full earth changes to half and then to crescent and then to a faint moonlit hole in space. The line of night crosses water, land, and cloud, sending its armies of shadows ahead. In its inevitable rhythm of motion, we see that night, like time itself, masks but does not destroy beauty.

So, like any aspect of nature seen through the eyes of study and time, we begin to understand. The sparkling sea's ever-changing character is clearly shown in the diffusion of its sun's reflection, in the changing hues of blue and green around the turquoise island beads, and in its icy competition with the virgin polar lands. The morning green of broken rafts of land seen before the midday's clouds, is soon lost in its blending with the colors of the sea, but the land's message survives in the warm yellow-reds of the timeless plains and deserts. The arcing, changing sails of clouds, following whirling, streaking pathways of wind, never cease to turn the pages of our future as they mark the passage of the life-blood of the planet.

The revolving equatorial view we have of earth concentrates our attention on the cradles of man, cradles of both the far past and the near future. There is that vast unbroken expanse of the Indian Ocean south of the even more vast green and tan continent of Asia. In one complete view there are all of the blending masses of greens, reds, and yellows of Africa extending from the historic Mediterranean to the Cape of Good Hope and from Cape Verde to the Red Sea. Then we see across the great Atlantic from matching coast to matching coast between Africa on the east and South America on the west. Later, watching all of South America with one glance, we seemingly move with imperceptible motion as our home turns irrevocably below us

Finally, there is the South Pacific. At one point in the planet's rotation, only the brilliant, snowy ranges, valleys and plains of Antarctica remind the viewer that land still exists. The red continent of Australia finally conquers this impression and becomes the earth's natural desert beacon. The island arcs of the Indies and then the eastern regions of Asia slowly revolve into view to finally saturate the mind, and the cycle repeats.

As day follows day, it is the patterns of weather, the ever-changing panorama of clouds, storms, and summer days that return to dominate our thoughts. The pinwheel cyclones that overpower the tropics; the daily pulsing masses at the equatorial convergence of the wind; the arrowheads of curving fronts trailing out of polar cold, across the ice pack and into a never-ending eastward track around their source. These outward expressions of earth's energy do not yet fully touch our minds.

At last, when we are held to our own cyclic wandering around the moon, we see the earthrise; that first and lasting symbol of a generation's spirit, its daring and its imagination. Having seen the earthrise as did our predecessors, we have reaffirmed Man's evolution into his universe, never to be satisfied with only the beauties and comforts of that rising earth. Paradoxically, we also find enhanced awareness and appreciation of that which we are now so willing to leave behind.

That lonesome, marbled piece of blue with ancient seas and continental rafts is our earth and will be our home as men travel the solar system. The modern challenge, emphasized by our travels, is to both use and protect that home, together, as people of earth. If we are successful, the historians of the solar system may say, when someday they write of those people, that this was their greatest act.

You may feel that this new view of the earth must also have more and deeper spiritual meaning than I have given you. It must prove that there is a God; or it must prove that there is no God; or it must prove that it makes no difference. We will not make the choice for you. We will only make it for ourselves. Even then, it turns out to be a choice we have already made in some other unaware time. All that is absolute and that will stand forever is that Man was there to see for himself.

(This concludes additional statements submitted today.)

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

MILITARY PROCUREMENT AUTHORIZATIONS, 1978

Mr. ROBERT C. BYRD. Mr. President, what is the business before the Senate?

The PRESIDING OFFICER. The clerk will state the pending business.

The assistant legislative clerk read as follows:

MILITARY PROCUREMENT AUTHORIZATIONS, 1978

The Senate continued with the consideration of the bill (H.R. 5970) to authorize appropriations for fiscal year 1978 for military procurement, research and development, active duty, Selected Reserve, and civilian personnel strengths, civil defense, and for other purposes.

Mr. STENNIS. Mr. President, right now is a kind of an odd time—one of the

groups, a minority group, is having a conference meeting—but I have just observed that we have a number of amendments here. Senators are calling in and coming in to see what we are going to do with them. The authors are not here.

Under the rules of the Senate, as I understand them, the manager of a bill can call up an amendment and move to table it and dispose of it in that way. I certainly would not be quick to do that and would not want to do it at all, but we have to do something to clear this docket.

I may call some of them up and, at least, make the committee's arguments against them. Maybe that will prompt a little further attention.

We must do something. This bill can very readily be finished today, I think, without a doubt. I hope we can at least start moving along.

The Senator from Alaska is ready with an amendment. Maybe he and the Senator from Georgia have had a chance to go over it. I yield to the Senator from Alaska to answer that question, if he wishes.

Mr. STEVENS. I thank the Senator.

Mr. President, this is one of the

UP AMENDMENT NO. 212

amendments that I have time for in the order. I send it to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes unprinted amendment No. 212.

On page 51, between lines 17 and 18, insert the following new subsection:

(c) The Secretary of Defense shall maintain at least one Senior Reserve Officers' Training Corps unit in each State. Such unit shall be at the principal State university, as designated by the Governor, if the university governing board so requests and no other unit exists in the State. In the case of a State with only one State university, the Senior Reserve Officers' Training Corps unit shall be required to serve students at all branch campuses of that university as the university administration requests.

The PRESIDING OFFICER. The time limit on this amendment is 1 hour. Who yields time?

Mr. STEVENS. I yield myself such time as I may need.

Mr. STENNIS. If the Senator will yield to me, I call attention to the fact that we have a vote scheduled for 2 o'clock. It might be necessary to interrupt the Senator, but we can handle it that way.

Mr. STEVENS. I hope that will not be required.

Mr. President, this amendment would require the Secretary of Defense to maintain at least one senior Reserve Officers' Training Corps unit in every State at the principal State university as long as the university administration requests that it should be maintained. In the case of a State with only one State university, the senior Reserve Officers' Training Corps unit would serve all students at all branch campuses where the university requests it.

With the all-volunteer force, it is especially important that we rebuild our reserve and active forces. I believe it is essential to maintain strong reserves and provide incentives to encourage people to join these forces. We must make the military service a viable career alternative for our young people. The senior Reserve officers training program is an excellent opportunity to encourage students to become involved in military affairs.

Mr. President, in my State of Alaska, we have been notified that the senior Reserve Officers Training Corps will be disestablished. This notification came at the same time as the disestablishment of three other senior Reserve Officer Training Corps units—one at a West Virginia University, Potomac State College at Keyser, W. Va.; one at the University of Connecticut, the Waterbury branch at Waterbury, Conn.; and one at DePauw University. These are effective on June 30, 1977.

Alaskans who would like to receive a commission through the ROTC will now have to attend a university in what we call the South 48. It will mean that the young Alaskan who wants to participate in the ROTC program will have to leave our State in order to acquire a university or college level education.

If the person who would like to attend ROTC could have that option available to him in his own State, we feel he would be better off. Some of our supplemental scholarship programs that are available to our own residents and to our native people are not available if they leave the State. I do not believe that young men and women should be forced to attend school in another State in order to be prepared to serve their country.

Travelling to another State to attend school, in some cases, may cause undue hardship, financially and otherwise, to the student and his parents. In the case of Alaska and Hawaii, I do not need to make the point that the next State is many, many air miles away.

With its immense terrain and different climatic conditions in various regions, the Arctic and the southeastern area, our State has proven to be an ideal training ground for military forces. As a matter of fact, a substantial portion of Alaska's land is dedicated to training our military forces. Because of our strategic location, an adequate Alaska defense installation is basic and essential to our whole system of national defense.

I feel Alaska should continue to be a part of the Senior Reserve Officers Training Corps program. As we have improved our educational program at the university level, we have now established several branches of the University of Alaska. We have the main branch at College, near Fairbanks. We have a branch in Anchorage, which is growing in enrollment; another one in Juneau, another one in Ketchikan, another one in Sitka, and we are now opening a new branch in the Bethel region in the interior of Alaska.

Now in order to maintain a Senior ROTC unit, we are informed that it is necessary to maintain on the main campus of the university—and the university is at College, as I indicated before—a level of 17 active members. The problem is that the student population is now spread all over the State. It is difficult to have the identity with the ROTC that used to be possible with only one campus for the university, and the numbers are not responding to the great diversification of our educational process at the university level. We, in the past, have produced an average of eight new officers from our University of Alaska. Unfortunately, for the last 2 years, it has dropped down to two. One of the reasons is that a young person who goes 2 years at Sitka or Ketchikan or Juneau quite often goes outside, to the University of Washington or down into Oregon, to get 2 years of higher education. We are not seeing these people stay a full 4 years. In order to get the full 4 years, they would have to move from the 2-year college campuses up to Fairbanks to get the last 2 years.

I think it is very unfortunate that the arbitrary guidelines that have been imposed by the Department of Defense mean that the University of Alaska will have no Senior ROTC unit. It means that our State will have absolutely no ROTC at any campus in the State. I think it is unfortunate. I think it is going to increase the growing antagonism between some of our young people in Alaska and the military. There are those there who want to enroll in ROTC. There are those presently enrolled in ROTC who are now being told they will have to leave and will not be able to finish at the University of Alaska; that they will have to go elsewhere to complete their ROTC training.

My amendment would say to the Secretar of Defense that there must be at least one Senior ROTC training corps unit in every State. The cost of that cannot be substantial. I do not know what we are talking about as to cost, frankly. Maybe my good friend, Senator NUNN, may know what the cost is up to the so-called break-even point of 17.

I issue a warning to the Senate that if Alaska cannot maintain at least one ROTC unit, the United States had better start thinking about how it is going to maintain the millions and millions of acres of our land that are dedicated to national defense for bombing purposes, for troop training purposes, and for other things, as these young people grow up in my State alienated against the military because this program, which still has some acceptance among our young people has been denied them because of the way the State has divided the student population throughout Alaska.

Mr. NUNN. Mr. President, will the Senator yield just for a moment?

Mr. STEVENS. I am happy to yield to the Senator.

Mr. NUNN. The Senator posed a question about the cost of this. It is my understanding the average cost for an ROTC graduate to the Government is $15,000.

It is my understanding that as the number of students enrolled goes down, which is the problem in Alaska now, the cost per student goes up, and that the problem now is that the cost per student in Alaska is $30,000, about twice the national average. That is the cost implication.

I completely sympathize with the Senator's position. But, by the same token, if there cannot be as many as 15 students enrolled in the third year in ROTC in Alaska at the principal institution, the amount of alienation is not going to be very severe because we do not have enough students. We do not have enough students that want it and that is the very criterion.

I know the Army would like to keep the ROTC program going in Alaska.

I was going to propose an alternative to the Senator's amendment that would simply require the Secretary of Defense to maintain an ROTC unit in every State provided that there would be at least 15 third-year students enrolled.

If we cannot get 15 third-year students enrolled in Alaska, then I am not sure that there is going to be any kind of tremendous alienation there. Who is going to be alienated? Certainly not many people because it does not indicate that much interest.

That is the basic problem. Perhaps the Senator would agree to a substitute that I would propose along that line.

Mr. STEVENS. It would be meaningless for the four universities that have been notified in my State because of the way they count the numbers.

Beyond that, I point out to my friend, we have just gone through building our Alaska pipeline. Now, a young man or woman at the university, as we see, the initial enrollment years are very good, but during this period of time these young people have been able to earn substantial amounts of money.

My own daughters, one took three quarters out of school, another a year and a half, went to work, put the money in the bank, and are putting themselves through school the way they want to do it.

That has happened in Alaska and will continue as long as the construction programs go along. They will go back one of these days, or they will, I assume, as my daughters have, and they will reenter the university—we do not know. But the dropoff between the first and second years has been extreme.

The point is that if there is going to be a nationwide ROTC program, the Army should not deny each State at least one unit.

What is it going to cost? Suppose we have 10 people and the price goes up $5,000 apiece for those 10. What we are talking about is $50,000 in order to maintain a nationwide image.

And what about the ROTC person involved? We have what we call "WAMI"—that is, a Washington, Alaska, Montana, Idaho program for premedical education. We share our facilities. So we might have a young man at Idaho who is an ROTC student and wants to go to Alaska to be involved in some study of arctic health problems. If we are going to do away with the ROTC program, he is not going to come if he is part of ROTC at Idaho and there is no program at the University of Alaska.

I think there should be at least one ROTC unit in every State on this level.

Mr. NUNN. The Senator's amendment as it is drawn now would require the Secretary of Defense to maintain the ROTC program in Alaska even if there were no students enrolled. Are we going to send officers and facilities, and everything else, to Alaska, hold them there, and spend the money with nobody enrolled?

Is there any minimum the Senator would agree with? I am trying to be reasonable here. Nobody would advocate having the ROTC unit in Alaska if nobody wants to belong.

Mr. STEVENS. It is only done if the university requests it under my amendment; and I am certain the university would never request it if they did not have any.

Besides that, we have two major Army installations within driving range of both these main campuses. They are the people from the Army base who assist in this. The Army is not sending any people to Alaska to maintain offices and reserve officer corps. They are going to make arrangements to take these people from Fairbanks to Fort Wainwright and from Anchorage to Fort Richardson for drills if they want to participate in the ROTC.

The Army tells me they have got to have a separate building and drill hall, and all that. That is a lot of nonsense. We have two major military installations under the Army's jurisdiction within 20 miles of each of these campuses.

Mr. NUNN. I understand the Senator's problem and I would like to agree to something here; I just want to know if there is any minimum number of students the Senator will agree with.

Mr. STEVENS. I would agree to a minimum number in the full 4-year course. As we see, they pick the one year these kids are dropping out now—age 19—when they can get a pretty good job in a construction season. They are taking them off right in the middle of the 19th or 20th year. Why not go on a total population level at all campuses?

Mr. NUNN. The reason for that is, and I think the Senator will agree, that they have to go through the whole program before they become an officer. That is the purpose of the program.

Mr. STEVENS. How about 30 in the program as a whole? Why take one year? Why say 17 in the third year?

Mr. NUNN. Does the Senator have any figures now about the number of people in the 4-year——

Mr. STEVENS. We have never dropped below 32 in the total program, not counting the people that want to be involved in Ketchikan or Sitka or Juneau. They do count Anchorage, that shifts back and forth. We have the feeder colleges, the 2-year colleges, and several locations that feed into those other main branches, where they must go there. That means in the third year they have to decide if they are going to Fairbanks, or Anchorage, or the University of Washington, or Puget Sound University, or somewhere else.

Our problem is that as the university spreads out, they will not all feed in to the upper division. Some will, in fact, leave, and we cannot maintain these numbers on a third-year basis because there are too many 2-year campuses.

Mr. NUNN. The minimum number of 30, if that were the case, then we would not be maintaining 17 in any of the——

Mr. STEVENS. The first year has always been more than that.

Mr. NUNN. If 17 are in the first-year class and there are 30 in total, then we would have 13 in the three other classes, which would be an average of 4⅓. It seems to me we ought to be talking about somewhere around 50 or 60 as a minimum.

I understand the problem, but there ought to be some minimum here to indicate the interest of the students.

I say to the Senator, the fact that there are two military bases that close should help enrollment. I know it would help facilitate the servicing of the unit. I do not dispute that at all. But, by the same token, it also should help enrollment. There should be more young people that would be willing to go into the ROTC and anxious to go into it. I have never known it to fail near any military base in my area of the country.

Mr. STEVENS. I think the Senator ought to take a look. They are failing all over the country. The ROTC——

Mr. NUNN. That is not the case in my section of the country. We have got school after school that wants new units and has students that will sign up.

Mr. STEVENS. In the one announcement we got on the University of Alaska, there are three other universities listed, and I am led to believe they are closing them, they are being disestablished.

Mr. NUNN. I am not saying that some schools are not being disestablished. I am saying that the big period of disenchantment with the ROTC was 3 years ago, and now the trend is upward, not downward, overall. But that does not solve the Senator's problem one way or the other.

I am asking the Senator if there is any number. I could go for a number of, say, a minimum of 50 students over a 4-year program. That would be an average of only 12¼ students per year, which is considerably less than the average, and would entail a subsidization of the Alaska program. I would like very much to see it continued in Alaska, but I think we have to be reasonable and have some minimum number for the purpose of being equitable to the taxpayers, who are paying for it.

Mr. STEVENS. That is not a good offer. The Senator is a kind friend and a gentleman, but that is not a good offer. It is not a final offer, unless they are on all campuses. We are putting these people through the first 2 years, and the first 2 years are when we have the population. In the last 2 years, we do not have the population, because many of them do not move up to Fairbanks or Anchorage.

Mr. NUNN. How many students are in the University of Alaska?

Mr. STEVENS. The total, including correspondence course students would be about 4,000.

Mr. NUNN. And of the 4,000, 50 are interested in ROTC over a 4-year period?

Mr. STEVENS. The Senator and I served in the service. Would the Senator like to go out and wear that uniform and drill alone?

The problem is that we had a budding ROTC. As we diversify, the units are not that big, and they will not count them, anyway. They count them only at the two campuses. They only allow us to have ROTC at Anchorage and Fairbanks. As a consequence, by meeting our objectives of reducing the cost of our State university and making the university more available to the area where they live, we have reduced this population.

Mr. NUNN. 4,000 students is still a large school.

Mr. STEVENS. That includes six campuses and correspondence students.

Mr. NUNN. The Senator is talking about six separate campuses. I think I have received the right answer to the wrong question, or vice versa.

How many students are on the main campus? The Senator says that the 4,000 figure applies to all the campuses. Is that correct?

Mr. STEVENS. Less than 2,000. I will have to get the figure, and I will put it in the RECORD. It is less than 2,000.

Mr. NUNN. But the 4,000 figure applies to six separate campuses, total?

Mr. STEVENS. And the correspondence people. We are not large in population, and the difficulty is that many of our young people leave the State, particularly in the third and fourth years. That is the problem.

Mr. NUNN. I certainly think it is reasonable to put a minimum figure on the 4 years. I guess we just have not reached an agreement on what is a good minimum figure. Thirty students over a 4-year period, counting everybody—it seems to me that the taxpayers of the country would not agree with the Senator's position that if you have 30 students, there should be a fullfledged ROTC unit there. That is not economical, from any point of view.

Mr. STEVENS. The country should look at what they are getting in Alaska for the military effort, for almost free. No one is paying for the land. No one is paying to go out on the public land and conduct exercises. We turn out a greater per capita support for the military than any other State in the Union.

If the Senator will agree with me that we get out of that third-year category and take the average total population of the first 2 years, and say to the ROTC people, "You are going to continue that through 4 years; as long as there are enough entrants in the first 2 years, they can go through," then I think we will have an agreement. We cannot maintain that third year average because of the problem.

If one is going to be a lawyer, by the time he hits his third year on one of those campuses, he is going to go to the University of Washington or Seattle. We have no law school; we have no medical school; we have no dentistry school. We have none of these schools, except one, and that is mining, so far as the graduate schools are concerned, in the professions.

Mr. NUNN. I have agreed with the Senator. The Senator has been persuasive in the fact that the criteria not apply to just the third year. I am agreeing to that, and I am trying to ask the Senator if we can come up with a reasonable number of students that we could say would be a minimum over a 4-year period. I submit to the Senator that I do not think 30 is a reasonable number.

Mr. STEVENS. The Senator is bargaining. We cannot maintain the 50; we know that. We already have lost that. If the Senator would put it at 40, they could restore the 40 before the year is out. It has been above 40.

Mr. NUNN. Does the Senator have a breakdown of how many are in the first year and how many in the second year, how many in the third year, how many in the fourth year?

Mr. STEVENS. For the one campus only.

Mr. NUNN. For the one campus only. That is the criterion.

Mr. STEVENS. We have the one campus, and that is the Anchorage campus. We do have a breakdown of that and will be glad to share it with the Senator.

Mr. NUNN. Mr. President, I propose to the Senator from Alaska substitute language for his amendment which would read as follows:

The Secretary of Defense shall maintain at least one Senior Reserve Officers' Training Corps unit in each State, if such a unit is requested by an educational institution in the State and approved by the Governor of that State. Such unit shall be established under and be subject to the provisions of Chapter 103 of title 10, of the United States Code, provided that the Secretary of Defense determines that there will be at least 40 students enrolled in the program.

Mr. STEVENS. Mr. President, I would be willing to accept the Senator's amendment if it were clear, either through our legislative history here or, preferably, in the amendment, that we are not talking just about one campus of a university, if it is a State university; or, if the Senator wants to push it, only those two campuses, for instance, for 4-year courses. I think it would be fair to count students enrolled in all campuses of the same university in order to determine the minimum amount necessary for the program.

Mr. NUNN. I do not have any objection to counting the other students at other universities who are not on the main campus, so long as they are serviced by the same unit.

Mr. STEVENS. Yes; they would be.

Mr. NUNN. But I do not think we are talking about creating a separate unit, with separate costs, at each campus.

The PRESIDING OFFICER. Under the previous order——

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the distinguished Senator from Alaska may have 2 additional minutes, so that this matter can be resolved before we vote on the Dole amendment, without any prejudice to the amendment by Mr. DOLE.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. I thank the Senator. I think we are in agreement.

UP AMENDMENT NO. 213

Mr. NUNN. Mr. President, I send the substitute amendment to the desk and ask that it be stated by the clerk.

I will ask the clerk to read the amendment, if he will.

The PRESIDING OFFICER. Until the time has expired on the Stevens amendment, an amendment to it will not be in order.

Mr. STEVENS. Mr. President, I ask unanimous consent that it be in order to have the amendment read at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NUNN. Mr. President, I ask unanimous consent that we be given an additional 4 minutes on the Stevens amendment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. STENNIS. Mr. President, may we have order. This is an important part of this amendment.

The legislative clerk read as follows:

On page 51, between lines 17 and 18, add a new section as follows:

SEC. 602. The Secretary of Defense shall maintain at least one senior Reserve Officers' Training Corps unit in each state if such a unit is requested by an educational institution in the State and approved by the Governor of that State. Such unit shall be established under and be subject to the provisions of chapter 103 of title 10, United States Code: *Provided*, That the Secretary of Defense determines that there will be at least 40 students enrolled in the program.

Mr. STEVENS. Mr. President, will the Senator allow me to modify that, where it says "enrolled in the program", to add "at the camuses of such university".

Mr. NUNN. I say to the Senator the title to which we refer has a specific provision in law that states that provided it meets certain criteria, and provided the units can be served, the other off-campus schools can be served by the same unit. I believe that is taken care of under the amendment.

Mr. STEVENS. Assuming that is correct, fine. It is not my understanding so far as my State is concerned, but perhaps there has been some——

Mr. NUNN. I think the legislative history will indicate that it will be the intention of this amendment that on any additional campuses that are served by

the unit on the parent campus, the students would be counted provided they are served by that unit at the main campus and, if necessary, if that has to be changed, we could take another look at it.

Mr. STEVENS. The Senator is as usual gracious, and I thank him for his proposition.

Is it in order for me to modify my amendment as suggested by the Senator, or is he offering it as a substitute?

Mr. NUNN. Either way.

The PRESIDING OFFICER. The Senator may modify his amendment.

Mr. STEVENS. Mr. President, I modify my amendment in accordance with the Senator from Georgia's compromise, and I thank him for his courtesy.

I ask unanimous consent that a letter from my Governor and a series of telegrams received from the State concerning this ROTC unit be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATE OF ALASKA,
Juneau, April 26, 1977.

Hon. TED STEVENS,
U.S. Senate,
Washington, D.C.

DEAR TED: It has recently been brought to my attention that the Department of the Army intends to eliminate the ROTC program at the University of Alaska at the end of this school term. It is my understanding that this is being done because of low enrollment, and pressure from the Administration for savings.

I appreciate the fact that enrollment at the University does fall below the Department's minimum, however, the ROTC program offers the only commissioning program in Alaska. Further, there are currently five junior year students in the program to whom I feel the Army has made a certain commitment, but have been informed that they should enroll in another college should they wish to complete their ROTC. Minimally, the program should be continued long enough for these students to complete their commitment to the Army at the University of Alaska. It is my understanding that the Department of the Army usually gives one year's notice prior to an action of this nature. This courtesy has not been extended the University.

I would appreciate any assistance you could render in this regard.

Sincerely,

JAY S. HAMMOND,
Governor.

TELEGRAM

FAIRBANKS, ALASKA.

Senator TED STEVENS,
Capitol Hill, D.C.:

Disapprove of Army eliminating ROTC at University of Alaska. ROTC only commissioning program for Alaskans.

THOMAS A. MERRICK.

TELEGRAM

ANCHORAGE, ALASKA.

Senator TED STEVENS,
Capitol Hill, D.C.:

Extremely concerned regarding immediate disestablishment of Alaska ROTC. Your action required now for continued program.

HOWEARD AND MARY THEW.

TELEGRAM

FAIRBANKS, ALASKA.

Senator TED STEVENS,
Capitol Hill, D.C.:

I am a cadet at the University of Alaska. The Army is going to abolish the ROTC program in Alaska. If this happens there won't be an officer producing program in the State. My commission would have been in the Alaska National.

Please your help is needed.

BILL WEBB.

TELEGRAM

ANCHORAGE, ALASKA.

Senator TED STEVENS,
Capitol Hill, D.C.:

As Alaskans we strongly object to the Army's elimination of ROTC at the University of Alaska. Alaskans cannot obtain Army commissions without leaving Alaska if ROTC eliminated. We believe the Army is rushing this action to forestall interference from Alaskans and their elective representatives. Your immediate action would be appreciated.

Lercy Cook, Margaret Cook, James G. Ambrose, Paul D. Bly, Bill Bezona, Marge Bezona, and Robert Sackett.

TELEGRAM

FAIRBANKS, ALASKA.

Senator TED STEVENS,
Capitol Hill, D.C.:

Disapprove of Army eliminating ROTC at University of Alaska. ROTC only commissioning program for Alaskans.

KENT D. THEW.

Mr. STEVENS. I yield back the remainder of my time.

Mr. STENNIS. I thank the Senators for working out a complex matter here. It seems to me that the Senators did a good job. Every State is certainly entitled to one of these ROTC units and, for my part, I am glad to support the amendment. Mr. President, I yield back all remaining time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alaska, as modified.

The amendment, as modified, was agreed to.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Is it not true that now we have the so-called Dole amendment?

The PRESIDING OFFICER. That is correct.

Mr. STENNIS. Five minutes' argument on each side, and then proceed to a vote.

The PRESIDING OFFICER. The Senator is correct.

AMENDMENT NO. 270

The clerk will report the amendment by Mr. DOLE.

The legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) for himself, Mr. WILLIAMS, and Mr. TOWER proposes amendment No. 270:

On page 46, line 2, strike out "76,400" and insert in lieu thereof "95,900".

Mr. STENNIS. Mr. President, if we have only 10 minutes here, 5 minutes to the side, will the Chair first get the Senate in order? Someone would like to hear what is being said.

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Kansas.

Mr. DOLE. Mr. President, just let me recap what was stated yesterday. This is a very simple amendment. It simply authorizes the strength for the Naval Reserve at 95,900. That is slightly less than the current authorization which Congress set last year of 96,500.

The amendment of 95,900 is based on the most recent DOD analysis that was done at the request of the Congress last year. The committee bill provides a strength authorization of 76,400, which is more than a 20-percent cut in the Select Naval Reserve strength.

The Senator from Kansas would point out that the senior Senator from New Jersey (Mr. WILLIAMS), the senior Senator from Texas (Mr. TOWER), the Senator from New Jersey (Mr. CASE), and the Senator from North Carolina (Mr. MORGAN) are cosponsors of this amendment.

Mr. President, I want to touch on just one point, and that is the mission of the Naval Reserve. Yesterday during the debate our distinguished colleague from Georgia (Mr. NUNN) said that those naval reservists cut under the committee proposal do not have a mission.

The fact is that all those reservists provided under this amendment for 95,900 are vitally essential. This number has been justified by the Department of Defense in the last three studies.

The Department of Defense, supported by the Navy, has shown that 95,900 reservists are essential to sustain any kind of combat operation by the Navy during the first 90 days of a national emergency. It is true that those units proposed to be cut by the committee are support units. But they are absolutely essential. We cannot sustain the Navy during combat operations or during a national emergency without logistics. We must have support units and they must be available immediately.

Just one other point: It has also been pointed out that DOD is not proposing that any naval reservists be terminated. But what DOD is proposing is that they simply stay in the Reserves without any monthly drill status—that they be taken off the monthly drill status.

The point is, according to indications we have had, if you do that you lose about 94 to 97 percent. They will simply leave the Naval Reserve.

What DOD wants to do is retain a minimum of 95,900 naval reservists, as their most recent analysis completed in February has shown, but they simply want naval reservists to participate without any drill pay. In other words, they want something for nothing.

As the Armed Services Committee report on this bill states, testimony indicates that most reservists transferred to the nondrill status will simply leave the Naval Reserve.

So if we agree there is a minimum requirement of 95,900, which the amendment provides, and which the Senator from Kansas believes is totally justified, then we should adopt this amendment that retains those reservists on drill status. It is almost in line with the measure in the House.

It just seems to me that, based on last year's debate and on the last 3 years' studies by the DOD, it is a figure that can be justified and should be adopted by the Senate.

I reserve the remainder of my time.

Mr. THURMOND. Mr. President, as a long supporter of adequate manning levels for the Naval Reserve, I feel compelled to endorse the amendment offered

by the distinguished senior Senator from Kansas (Mr. DOLE).

Last year Congress explored the Naval Reserve manning carefully and provided for a manning level close to the pending amendment.

Since that time a study, requested by the Congress, has justified this level of manning. This level is 95,900, a number 19,500 above that provided in the current bill.

If this cut proposed by the committee stands, it will mean a manning level below that needed for mobilization. Furthermore, it would bring about a loss in enlisted Reserve personnel who simply will not serve without pay, as is the case with some officers.

Mr. President, I urge the Senate to accept this amendment in order that personnel stability can be achieved in the Naval Reserve. This is necessary if this important segment of our total force is to effectively carry out its mission of filling our regular units and providing new units in the event of a national emergency.

Mr. STENNIS. Mr. President, I yield such time as the Senator may use to the Senator from Georgia. I yield him 5 minutes.

Mr. NUNN. Mr. President, on the last point made——

Mr. STENNIS. Mr. President, may we have conditions here where some can hear, anyway?

The PRESIDING OFFICER. The Senate will be in order. Is the Senator yielding time on the bill? There are only 4 minutes left on the amendment.

Mr. STENNIS. All right. I yield 4 minutes and some on the bill if the Senator so desires.

Mr. NUNN. Mr. President, on the last point made by the Senator from Kansas, it simply is not accurate to say that the Department of Defense has certified to the mission of the Naval Reserve for all of these units, as a result of recent studies.

I have a letter here dated February 24 from Mr. Charles Duncan, who is the Deputy Secretary of Defense, and I read from that letter on this particular point. He says:

> I am not satisfied as to the justification for the specific selected reserves strength suggested. The study does acknowledge shortcomings in addressing manpower and fleet considerations and correctly points out that other reserve studies are planned or underway.

These studies have not been ratified by the Department of Defense. They are specifically disavowed by the Deputy Secretary of Defense. In just summarizing the debate we had yesterday, our committee and our subcommittee have carefully reviewed the President's budget request for the various kinds of Naval Reserve units. Based on this detailed study, the committee recommended adding 24,400 to the President's budget for deployment related units, ship and aircraft maintenance units, units with technical and professional skills and units to do new missions transferred from the active Navy to the Naval Reserve. The committee recommended strength would not require reductions in the current number of Naval Reserve construction battallions known as the Seabee battalions.

Many of the units that would be added by the Dole amendment have been identified by the Navy as low priority and many involve command headquarters and staff activities. It is difficult to justify large expenditures to retain units with little or no specific relationship to early deployment plans.

As I stated in the debate yesterday, Mr. President, I would be among the first to be in favor of adding back Naval Reserve units when and if they are given a mission which the Navy is going to let them carry out.

We have been through this year after year. Everybody will agree that the units that the Committee has not added back for biweekly training are units not given a mission today and do not have a meaningful wartime mission.

If we want to take $20 million and put it in here because of some pressures we may be getting from one source or the other, this is a perfect opportunity to do it. But I warn my colleagues that under the budget resolution this $20 million is not coming out of the sky. It is not coming out of some money tree. It is coming right out of readiness, research and development, or procurement, because we have an overall ceiling on what we are going to be able to spend. So if this is of high priority, I urge Senators to vote for it. If the priority is one of the lowest priorities in the entire defense budget—and as a matter of fact it is not even in the budget—then I urge Senators to reject the amendment.

Mr. STENNIS. If the Senator will yield for a question, as a matter of fact, we already put in 24,400. Is it not above the budget request?

Mr. NUNN. The committee bill is 24,000 naval reservists above the administration's request; the Dole amendment would virtually double that. So the Senator from Mississippi is entirely correct.

The PRESIDING OFFICER. Who yields time?

PRIVILEGE OF THE FLOOR

Mr. HAYAKAWA. Mr. President, I ask unanimous consent that my staff member, Dr. John Backer, have the privilege of the floor.

The PRESIDING OFFICER (Mr. HATHAWAY). Without objection, it is so ordered.

Mr. DOLE. Mr. President, I do not have any quarrel with the statements made by the distinguished Senator from Georgia or his response to questions. I might say the figure in the House bill is 93,600. The figure recommended by the Carter administraiton was 52,000. The figure recommended in the third and most recent study by DOD was the figure the Senator from Kansas proposes, 95,900.

It may be true they are going to have still another study. This will be the fourth study by the Department of Defense, and we have had nothing but turmoil in the Naval Reserve since the early seventies. It is pretty hard to reorganize and really get out on a mission and have the resources and morale we need if we are constantly reorganizing the Naval Reserve. It just seems to me it is no use to say, "Well, we are going to call them back in if needed." What is going to happen with the Naval Reserve once we eliminate 20,100, which is what the committee wants to do? They are not going to be there. They are going to be gone.

Mr. NUNN. I ask the Senator from Kansas one question. What are the 24,400 going to do right now if we have a war?. That is the problem. If we take $20 million, use it for something and improve our national security, that is the whole point.

Mr. DOLE. They have a mission. In fact, they had missions taken away. It seems to me instead of putting the pressure on to cut back the Naval Reserve, the pressure should be put on the Navy and DOD to complete those missions. But I suggest that the DOD is saying in effect: "Well, we want them to stay in the Reserve; but we do not want to pay them for drill status."

We simply cannot have a Reserve on that basis. The Senator from Kansas is convinced that the 95,900 figure is justifiable.

Having said that, I yield back the remainder of my time and ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Kansas. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. DURKIN (when his name was called). Present.

Mr. ROBERT C. BYRD. I announce that the Senator from California (Mr. CRANSTON), the Senator from Arizona (Mr. DECONCINI), the Senator from Massachusetts (Mr. KENNEDY), the Senator from New Hampshire (Mr. MCINTYRE), and the Senator from Montana (Mr. MELCHER) are necessarily absent.

I further announce that, if present and voting, the Senator from Arizona (Mr. DECONCINI) would vote "no."

Mr. STEVENS. I announce that the Senator from New Mexico (Mr. DOMENICI), the Senator from Maryland (Mr. MATHIAS), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

I further announce that the Senator from Oklahoma (Mr. BARTLETT) is absent due to illness.

I further announce that, if present and voting, the Senator from Maryland (Mr. MATHIAS) would vote "yea."

The result was announced—yeas 44 nays 46, as follows:

[Rollcall Vote No. 143 Leg.]

Cranston	Kennedy	Melcher
DeConcini	Mathias	Weicker

So the amendment (amendment No. 270) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. NUNN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. STENNIS. Will the Senator yield to me for just a moment?

Mr. GRIFFIN. Yes.

Mr. STENNIS. Mr. President, if we may have quiet, I am trying to review the situation briefly here. We have a matter to be presented by the Senator from Michigan (Mr. GRIFFIN). I think that will take 5 or 6 minutes. Then we propose to have the Proxmire amendment next. That relates to a matter concerning the Navy. Then, if the schedule runs well, we shall have the Baker amendment next, which relates to civil defense. I believe that is all that we have definite information on.

PRIVILEGE OF THE FLOOR

Mr. ZORINSKY. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. GRIFFIN. I yield.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that Lewis Ashley, a member of my staff, may have the privilege of the floor during consideration of H.R. 5970, which is before us.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I insist that we must have order if we are to be able to hear the Senator from Michigan.

The PRESIDING OFFICER. The Senate will be in order.

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Utah (Mr. GARN), I ask unanimous consent that Dave Fitzgerald of his staff have the privilege of the floor on a similar basis.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROJECT SEAFARER

Mr. GRIFFIN. Mr. President, at this time, I wish to focus the Senate's attention on a proposed naval communication system known as Project Seafarer, which is referred to in title II of this bill. It is envisioned that Seafarer, a huge, underground antenna, would be used by the Navy to communicate with our submarine fleet, utilizing extremely low frequency—ELF—signals.

Some of my colleagues will recall earlier references to a predecessor project, referred to as Sanguine, which would have been a hardened ELF communications system, originally designed to survive a nuclear attack.

In the beginning, it was proposed that Sanguine would be built in Wisconsin, but the proposal generated so much public and political controversy there from 1968 to 1972 that the Navy was directed to withdraw from Wisconsin and to consider alternate sites.

Subsequently, the Navy abandoned Sanguine as a project and substituted a modified version, which it calls Seafarer. Seafarer has become very controversial in my State, since Michigan has been under consideration as one of several possible sites for this project. It is controversial not only because its construction, obviously, would make that part of the State a prime enemy target in the event of war, but also because there are many unanswered questions about the project—its environmental impact, its technological feasibility, and, indeed, even the military necessity for such a massive system.

The National Academy of Sciences has been engaged in a study of the environmental impact of Seafarer, but it has not issued a final report. As proposed, the project would encompass an area of 4,000 square miles. It is my strong view that the Senate should not authorize construction of Seafarer before the Academy's final report is issued and unless concerns raised in the report about adverse long-term effects on human health and the environment are researched and resolved.

I wish also to call attention to concerns raised by the House Armed Services Committee regarding the feasibility of Seafarer. On February 18, 1977, the Subcommittee on Investigations of the House Armed Services Committee issued a report stating in part:

Because of its vulnerability and its very limited transmission rate, the Seafarer system, as presently proposed, however, appears to be an incomplete answer to that critical command and control problem. The Panel believes that intensified research into submarine communications systems should be continued. That research should include exploration of all possible alternatives to Seafarer in an effort to identify a more responsive and survivable system.

Subsequently, the full House Armed Services Committee refused to authorize further funding of Seafarer and stated in its report on this bill:

The Committee does not believe that the present Soviet anti-submarine warfare (ASW) threat to U.S. attack and ballistic missile submarines justifies at this time the development of the proposed Seafarer communications system.

The technological feasibility and the environmental impact of Seafarer are important considerations, but I am even more concerned about another issue so far as Seafarer relates to my State. I refer to a matter of simple good faith.

Because of certain developments which have transpired—and I shall explain them—Seafarer has become, for the people of Michigan, an important test of the good faith of the Federal Government.

When the Navy first began to search for a site for an ELF communications system, it was determined that a Midwest location was preferred because of a geologic rock formation known as the Laurentian Shield. Wisconsin was the Navy's first choice for the Sanguine system, and a test facility was built at Clam Lake, Wis. Since the criteria used for site selection for Sanguine were identical to those for Seafarer, it is reasonable to assume that Wisconsin is regarded by the Navy as its first choice location for Seafarer.

However, Wisconsin was not mentioned as a possible site in the Navy's 1977 draft environmental impact statement—EIS—for Project Seafarer because of local opposition and a previous directive from the Secretary of Defense in 1972 relating to Project Sanguine. To quote from the Navy's 1977 draft EIS, Sanguine was not built in Wisconsin because:

The Secretary of Defense, having assessed the project in terms of public and political acceptance, directed the Navy late in 1972 to discontinue system planning for Wisconsin and investigate the usefulness of the Texas site as an alternative location.

The Texas site was later also rejected.

Opposition remained in Wisconsin to the Seafarer system so attention was turned to another Midwestern site—Michigan.

However, in light of the concerns earlier raised in Wisconsin about Sanguine and Seafarer, our Governor, Governor Milliken, refused to cooperate with the Navy in studying the possibility of Michigan as a Seafarer site unless he received assurances that the Governor's concurrence would be obtained before any decision would be made to locate it in Michigan.

Indeed, in February 1976, Deputy Defense Secretary William Clements confirmed in writing to Governor Milliken, that such concurrence or veto power would be extended to the Governor of Michigan. In a letter dated February 12, 1976, the Deputy Secretary wrote:

You have my every assurance that a Department of Defense decision to add Michigan as a final candidate site along with those in Nevada and New Mexico could be made *only with your concurrence.* (Emphasis supplied)

Shortly after President Carter took office, his administration acknowledged and reaffirmed the commitment of the previous administration giving Governor Milliken a veto authority with respect to Seafarer.

Thereafter, on March 18, 1977, Governor Milliken wrote Defense Secretary Harold Brown as follows:

I have repeatedly received assurances from the Department of Defense, confirmed by the White House, that Seafarer would not be built in Michigan if I object.

Mr. Secretary, *I object.* (Emphasis supplied)

It would be viewed as a cynical act for the Senate to ignore these assurances and the Governor's objection and authorize a Michigan site for Seafarer.

But good faith is at stake in another way, as well.

During his election campaign, Candidate Carter issued a statement on October 25, 1976, directed to the people of Michigan's Upper Peninsula. The statement included this commitment by Mr. Carter:

If I am elected, Project Seafarer will *not* be built in the Upper Peninsula [of Michigan] *against the wishes of the citizens.* (Emphasis supplied)

There have been a number of referendums held in the Upper Peninsula of Michigan concerning project Seafarer. It is clear that the overwhelming majority, by margins of up to 4 to 1, are against the location and construction of Seafarer in the Upper Peninsula of Michigan.

Now that Mr. Carter is President and Commander in Chief of the Armed Forces, of course, it is inconceivable that he would disregard such a commitment to the people of Michigan—and I feel confident that he will not.

Accordingly, if and when Seafarer is determined to be necessary and feasible as a communications system for the Navy—which is not the case today—Seafarer should not be located in Michigan, in view of the circumstances I have outlined and in view of the commitments that have been made.

Now, Mr. President, having recited that history, I come to the matter of the legislation before us.

It concerned me to find money in the bill for Seafarer, but I have inquired and have learned that none of the money authorized by the bill will go for construction of Seafarer in Michigan—or anywhere else. The money in this bill, as it is presently written, goes toward further research on the project.

I will not quarrel with the idea that the Navy needs a system to communicate with its submarines, and it may be that further research is justified.

I have taken it upon myself to get in touch with Senator MCINTYRE, chairman of the Military Research and Development Subcommittee of the Armed Services Committee. I have asked him a series of questions directly on this point—questions about the impact and effect of this authorization bill with respect to any possible development of Seafarer in Michigan.

The colloquy makes it clear that none of the funds in the bill this year would be used for that purpose.

I appreciate the assistance of the distinguished Senator from New Hampshire (Mr. MCINTYRE) in clarifying this matter, and with his approval, I ask that my questions and his answers may be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ANSWERS FOR THE RECORD BY SENATOR THOMAS J. MCINTYRE, CHAIRMAN, SENATE MILITARY RESEARCH AND DEVELOPMENT SUBCOMMITTEE, TO QUESTIONS SUBMITTED BY SENATOR ROBERT P. GRIFFIN

Question: Will any of the $20.1 million authorized under H.R. 5970 be available for use by the Department of Defense for the construction of Project Seafarer in Northern Michigan?

Answer: No. There are no funds authorized in this bill, either in the $20.1 million authorized for ELF communications or in any other part of the bill, to construct Project Seafarer in the State of Michigan or to construct a test site for Project Seafarer.

Question: Would it be possible for the Department of Defense to request the reprogramming of funds for the construction of Project Seafarer in Michigan during fiscal year 1978?

Answer: No, the intent is clear that no money shall be used for that purpose. Since that is the case, the project would not be eligible for the reprogramming to reverse this decision by Congress.

Question: So, in sum, then am I correct in understanding that for all practicable purposes the question of constructing Project Seafarer or initiating a test site for the purpose in Michigan is dead during the next fiscal year?

Answer: You are entirely correct. It would take a new bill which would ask for that express authority and for all practicable purposes this would not occur until the next budget cycle next year.

Question: Will any of the funds authorized under this bill be available for use by the Department of Defense in the promotion of Project Seafarer in Northern Michigan?

Answer: No. Funds would not be available for Project Seafarer in Northern Michigan. Naturally the Department of Defense must meet its obligations under the law to provide information to the public as a part process, but there is no intent to authorize funds for "promotion" of this project beyond providing the public with this information.

Last year our Subcommittee rigorously examined this question in our hearings. Navy committed to quite specific and, in our judgment appropriate, guidelines regarding Navy's informational activities on Seafarer and it is our intention that those guidelines still be in effect through the next fiscal year and beyond.

Question: Will the Senate Armed Services Committee direct the Navy to examine the National Academy of Sciences report to be released later this year, in order to ensure that all questions relating to potential threats to human health and the environment are thoroughly examined; and, further, that any remaining questions on the effect of Seafarer concerning adverse human health effects or the environment raised by the NAS report will receive such study as the Academy required before any construction of Seafarer will begin?

Answer: Yes. The Armed Services Committee's interest in this subject dating back to 1969 has been to ensure that this capability which we believe necessary to our national security be achieved in a way that thoroughly avoids any threat to human health or any significant, adverse impact on the environment. If the final National Academy of Sciences report raises any such questions it would be quite consistent with the Committee's history to ensure that Navy has thoroughly studied these matters and devised measures to protect humans and the environment before construction could begin.

Question: Will the Senate Armed Services Committee reexamine Project Seafarer after studies of a smaller ELF system are submitted by the Navy to determine if Seafarer is still a necessary and effective communications system before any decision to construct the system is authorized? Will a specific determination by the Senate Armed Services Committee that Seafarer is necessary for our national security be made before any decision to construct Seafarer is made?

Answer: The answer to both questions is "yes". In fact, the Committee on Armed Services has for years made this a subject of special interest and has insisted that the Department of Defense assume a burden of proof about military requirements not only before it goes into deployment of a system but even before it enters full-scale development.

Question: If Project Seafarer or some version of this ELF system is determined to be necessary for our national security and is technologically feasible, will the Committee ensure that it will be placed in the location that yields the greatest operational capability and effectiveness?

Answer: Of course, as I am sure my good friend from Michigan is well aware, the principal responsibility for any initial request to deploy an ELF system at any particular location first rests with the Executive branch. In fact, the Committee on Armed Services has for two years now done its best to insist that the Department of Defense assume this responsibility which is clearly theirs. Any such proposal must be explicit and must assume a burden of proof in demonstrating that the location chosen does in fact yield the greatest operational capability and effectiveness.

The Committee and this body would certainly review any such proposal and independently judge whether the Executive branch has adequately met the necessary burden of proof before agreeing to fund such a request.

Mr. RIEGLE. Mr. President, will the Senator yield?

Mr. GRIFFIN. I am glad to yield.

Mr. RIEGLE. Mr. President, I thank the Senator for yielding.

I want to add my voice as well, because we have, with both Senators from our State, strong bipartisan opposition to the continued funding, any continued funding, for locating Project Seafarer in Michigan.

In my own case, that comes after classified briefings from Department of Navy officials, after several trips to Michigan's Upper Peninsula where I had extensive discussions with area residents about Seafarer, and after reviewing the hearings and recent action taken by our colleagues in the House of Representatives and my colleagues on the Senate Armed Services Committee.

As we know, residents of the Upper Peninsula of Michigan have repeatedly voted in public referenda by margins of 4 to 1 in opposition to this project and have otherwise clearly evidenced strong and sustained feelings on this issue. I need not remind this committee of the earlier rejection of Sanguine/Seafarer by Wisconsin and Texas. I will point out, however, that if our experience in Michigan is indicative of earlier activities in Wisconsin and Texas, the Department of Navy has been its own worst adversary in this long debate.

I might just say parenthetically at

this point, in terms of the alternative site locations for this project that were thought to be necessary, when I asked the person in charge of that project in the Navy Department some months ago the ideal location in the country for the placement of such a system as they have in mind, he was very clear in saying that the best location from the point of view of rock structure and the rest was the State of Wisconsin. But, as was pointed out, apparently because of opposition from the State of Wisconsin and former Defense Secretary Laird, blocked that possibility, and this project has been bouncing around since and has now bounced into Michigan.

But as we know, over the years, local residents of proposed sites for Project Sanguine/Seafarer have voiced their greatest concerns over the possible damage that would result to the environment of their area and its hazardous effect on their health, that of their families, and friends. I must say that I share those concerns and I do not think all the questions have been answered that have arisen.

However, my strongest objection to any continued effort to locate project Seafarer in Michigan rests with my strong doubts about its technical capacity to meet the needs of the Department of Navy. Certainly I have a strong commitment to my State and to my constituents. As we all do, I believe in a strong defense, and I believe national security needs must always be taken with utmost seriousness.

Mr. President, after my latest classified briefing by the Department of Navy on March 2, 1977, Congressman CARR joined me in a letter to President Carter and Secretary of Defense Brown pointing out two main operational problems of the ELF communications system:

(1) high vulnerability of the transmitter to attack and destruction in a wartime situation, and (2) the extremely low rate at which Seafarer could transmit information, limiting its peacetime usefulness.

When these limitations are considered, it appears that the real utility of the system lie in a bellringer function to notify submarines to move close to the surface for further information. Congressman CARR and I pointed out that this bell-ringer function can be adequately performed by the existing Wisconsin ELF test facility at Clam Lake. We further proposed that the Defense Department explore the possibility of using the Clam Lake bellringer for the short term, while at the same time exploring high-technology, long-term alternatives which will not have Seafarer's numerous deficiencies.

Mr. President, the Senate Armed Services Committee addressed many of these concerns in its hearings and came to different conclusions than our House colleagues. I have reviewed the committee report and am troubled by the differences in the action taken by the Senate on the one hand, and the House on the other.

I rise today to make it clear I continue to oppose this project wherever it might be placed.

Mr. President, I, too, have addressed prepared questions to Senator MCINTYRE, chairman of the Senate Military Research and Development Subcommittee, concerning subjects raised in the committee's report. He has been quite responsive, and it is my hope that the answers he has provided will be helpful to the House and Senate conferees when they meet to address the differences with regard to Project Seafarer. I ask unanimous consent that my questions and Senator MCINTYRE's answers be printed in the RECORD at this time.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ANSWERS FOR THE RECORD BY SENATOR THOMAS J. MCINTYRE

Q. Senator RIEGLE. Why, if this project is so critical to our national security, has this decision been delayed for so long?

Senator MCINTYRE. The Committee shares your frustration regarding the delay.

Part of the delay has been necessary to resolve the environmental controversy surrounding ELF transmissions in a proper way. Our Committee has tried to ensure an orderly and objective resolution of this dispute by insisting on a fair and authoritative review of the matter by the National Academy of Sciences. I personally regret that the Academy has taken as long as it has to issue its final report. We had hoped that it might be finished late last year.

There has also been indecision in the Executive Branch about where the project should be located. This is also a clear case of a capability which the country needs and which our technology can provide which has been delayed primarily because of the inability of the Executive Branch to make some difficult decisions.

Q. Senator RIEGLE. If national security needs are so overwhelming, why was a veto granted to the Governor of Michigan, and why were Texas and Wisconsin allowed to reject this project?

Senator MCINTYRE. Neither the Committee nor this senator ever concurred in the granting of a veto to the Governor of Michigan. Such a procedure has, in my view, dubious constitutionality and national security matters should depend on rational considerations rather than local ones.

At the same time, the Committee has consistently believed that, while there is a national security need that should be met, we should make every effort to do so in a way that would be biologically and environmentally safe and which would accommodate, as much as possible, local feelings about land use.

I am not aware that Texas and Wisconsin were allowed to reject this project in any formal sense. As I understand it the Wisconsin site was precluded from consideration by the then Secretary of Defense Laird for reasons that are best known to him. The Committee was not consulted nor did it participate in such a decision. We did look into the Texas site and the evidence is fairly clear that rocky terrain there would have made that site unduly expensive because of higher construction costs.

Q. Senator RIEGLE. How can the House of Representatives conclude that the transmission rate of the ELF is insufficient to communicate adequately with deeply submerged submarines while the Senate Armed Services Committee concluded that the ELF system as now designed provides such an excessive rate of transmission, that a significantly reduced ELF system would be sufficient?

Senator MCINTYRE. We look forward to understanding the position of the House more clearly once we begin conference on this bill.

Our Committee made a detailed independent review of the adequacy of an ELF system and we feel quite confident that our reasoning in our report is valid.

It is possible that the differing conclusions may be rooted in differing assessments of two variables. First, our Committee looked with great care at the likely operating areas of both our strategic submarines and our SSNs to judge the distance to which an ELF system would have to transmit. It seemed impractical and irrelevant to judge the adequacy of a system in terms of transmitting to places on the globe that our submarines are not likely to operate. Our Committee's confidence in our judgment on this point is enhanced by years of intensive inquiry into these operational aspects of our submarines, particularly as we reviewed the Trident system and the Soviet anitsubmarine warfare threat.

Secondly, we feel that there is a greater inherent capability for message compression through the exploitation of digitized transmission techniques than either certain elements of the Navy or the House apparently believe.

In sum, we are confident that the Seafarer as currently designed would be more than adequate to meet current operational requirements of our submarines. In fact we feel, as our report indicates, that a smaller system may be adequate.

Q. Senator RIEGLE. What consideration was given to the blue-green laser?

Senator MCINTYRE. Our report speaks to the satellite laser question. First, there are substantial questions whether this system could be realized in the practicable future. But even if it could be demonstrated, it would likely introduce new vulnerabilities to our operating submarines because the submarine would apparently have to restrict its freedom of movement in order to receive messages from such a system. We have invested literally tens of billions of dollars and the genius of our technology in our strategic submarines, primarily to increase this ability to patrol freely and to complicate thereby the Soviet antisubmarine warfare task.

Q. Was the Committee aware that the Department of Navy has instructed its technicians not to discuss the development of the blue-green laser because it is seen as an alternative to the ELF? (Those technicians would indicate that the laser will be available in 4–5 years).

Senator MCINTYRE. The Committee is not aware that the Navy has instructed technicians not to discus this development. Certainly, I would personally oppose any such restriction. But frankly, the blue-green laser seems so unlikely a possibility and as such, a dangerous liability, that I personally do not regard this as a serious alternative to a buried ELF system.

Q. Senator RIEGLE. Does the Committee expect, through this authorization, that the Department of Navy is to argue for a Michigan site after already documenting earlier that Wisconsin would be the best site; What voice would the residents of the Upper Peninsula have in a site selection: What weight did the Committee give to the fact that there is bipartisan objection to this project within the Congressional delegation from Michigan and that the Governor of Michigan has exercised the veto extended him over Project Seafarer by former President Ford and renewed by President Carter?

Senator MCINTYRE. The principal responsibility for any initial request to deploy an ELF system at any particular location first rests with the Executive Branch. In fact, the Committee on Armed Services has for two years now done its best to insist that the Department of Defense assume this responsibility which is clearly theirs. Any such proposal must be explicit and must assume a burden of proof in demonstrating that the

location chosen does in fact yield the greatest operational capability and effectiveness.

The Committee and this body would certainly review any such proposal and independently judge whether the Executive Branch has adequately met the necessary burden of proof before agreeing to fund such a request.

Mr. RIEGLE. Mr. President, I conclude by saying, as was pointed out by Senator GRIFFIN, President Carter, when he was a candidate for President, made it very clear in travels throughout my State that the State of Michigan would have the right to exercise a veto over this project if, in the will of the citizens of that State, it decided, for whatever the reasons, it did not want it placed there.

That commitment was very clear; there were no strings attached, at least none identified.

Now, the State, both by public referendum and by action of the Governor has indicated we do object, and wish to exercise our veto. That veto is supported by both Senators from the State, who happen to represent both major parties.

While there is no money, per se, for building that project in this bill, it has been my observation after 10 years in the House, that defense projects of this sort linger on year after year after year, with the justification not clear, and a tendency to be funded with research money and kept alive. Very often, they finally take on new life of their own and make their way into being.

I do not want to see that happen in this case, and if there were money in this bill for that purpose, to build the system, I would have to move to strike it. And failing that, I would then have to vote against the entire bill.

So I hope it will not come to that situation in the future.

I thank the Senator for yielding.

AMENDMENT NO. 272

Mr. PROXMIRE. Mr. President, I have an amendment at the desk which I call up at this time.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Wisconsin (Mr. PROXMIRE) proposes an amendment numbered 272.

The amendment is as follows:

At the appropriate place in the bill insert a new section as follows:

SEC. . (a) Notwithstanding any other provision of law, the Secretary of Defense is authorized, under such regulations as he shall prescribe, to expand the job classifications to which female members of the Armed Forces may be assigned. The Secretary of Defense may include the following types of duty within the job classifications to which female members of the Armed Forces may be assigned:

(1) permanent duty assignment to hospital ships, transport ships, and ships used for similar or related purposes, and temporary duty assignments to any other vessel not likely to be used for combat mission purposes;

(2) permanent duty assignment as missile launch officers in the Air Force;

(3) permanent duty assignment as pilots and navigators in aircraft not likely to be used in combat missions;

(4) permanent duty assignment as tactical communications chiefs in the Army; and

(5) such other temporary or permanent duty assignments as the Secretary of Defense determines can be made to eliminate discrimination against female members of the Armed Forces without adversely affecting the ability of the military departments to carry out their respective missions.

Nothing in this section shall be construed as requiring the Secretary of Defense to place female members of the Armed Forces in positions where they are likely to be personally involved in direct combat.

(b) The Secretary of Defense shall define the terms "combat" and "combat mission" for purposes of this section and such terms shall apply uniformly to all branches of the Armed Forces of the United States except in cases where the Secretary of Defense determines uniform application is impracticable and authorizes exceptions to be made.

PRIVILEGE OF THE FLOOR

Mr. PROXMIRE. Mr. President, I ask unanimous consent that Joyce Kaufman and Ron Tannen, of my staff, be permitted to remain on the floor during the debate and the vote on this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

On this amendment there is a limitation of 1 hour, to be equally divided.

Mr. PROXMIRE. Mr. President, I yield myself such time as I may require. I will not require a great deal.

Mr. STENNIS. Mr. President, may we have order? We might finish this debate quickly if we are listened to.

The PRESIDING OFFICER. The Senate will be in order.

Mr. PROXMIRE. Mr. President, this amendment will give the Secretary of Defense the authority to increase the opportunity for women in the Armed Forces. The amendment will not require that women be involved in a direct combat role. What will it do? It will allow the Secretary to open up areas now prohibited to women by statute, by policy, or by tradition. It will provide for a more efficient use of women and therefore better use of all personnel within the services.

The amendment suggests some specific areas within each of the services where the role of women could be expanded, and it also provides for new initiatives of the Secretary of Defense.

Specifically, this amendment gives the Secretary of Defense the authority to permanently place women in the Navy on hospital ships and transports and the temporary duty on the other vessels not expected to be engaged in combat. It would allow women in the Air Force to be used as pilots and navigators on aircraft not expected to see combat. It would open up the position of missile launch officers. It would also open certain jobs in the Army to women.

In each case, let me stress again, these are not direct combat positions. But for a number of reasons, women have been precluded from these jobs in the military.

What now prohibits women from assuming these noncombat positions? The answer is tradition, and a hodgepodge of conflicting regulations and laws. If there is one clear conclusion that can be reached from studying the regulations, practices, and laws applying to women in the military, it is that there is no clear policy. Each service has a different interpretation. Let me explain.

CONFUSIONS IN THE LAWS AND REGULATIONS

Title 10, section 6015, specifically prohibits women in the Marines and the Navy from serving on board vessels and on aircraft in combat. It should be noted, however, that the Navy now has asked that this prohibition be modified. It has asked Congress to change the law so that women can serve on ships such as hospital ships and transports, on a permanent basis, and on other ships not expected to see combat, on a temporary basis. This is exactly what my amendment would do—carry out the request of the President and the Secretary of the Navy to make better use of women in the Marines and the Navy. The Navy letter requesting this authority is on the desk of every Senator.

Title 10, section 8549, governs the role of women in the Air Force. It prohibits women from being assigned to aircraft that are engaged in combat missions. What the Air Force has done traditionally is to interpret this so broadly as to not allow women to be trained as pilots, navigators or crew members regardless of whether or not the aircraft is likely to see combat. Further, the Air Force restricts women from serving as missile launch officers.

This is a policy decision and is not based on law. The Air Force is now conducting experiments using women as pilots and navigators. My amendment would open up these job classifications to women on a permanent basis where the aircraft involved are not expected to be engaged in combat. It follows along the lines of the Air Force experiment.

There is no specific legislation that restricts women in the Army, the WACS, from serving in jobs denied to women in the Navy and Air Force. However, Army policy specifically precludes women from serving in specific military occupational specialties—MOS—33 of the 389 available MOS's, approximately 10 percent, are currently closed to women. This does not, however, mean that women are automatically assigned to serve in the available 90 percent. My amendment would open up one new Army area to women—tactical communications chief—and allow the Secretary to find other job classifications that can be made available to women.

EFFECT ON WOMEN

NAVY

What do these prohibitions mean to women in the service? In the case of the Navy, it means that a woman is barred from command at flak rank because she cannot serve on board a ship. It means in effect, that there is a limit imposed on how far up the officer scale she can go. In Annapolis, it means that women cadets cannot go on the summer sea training cruises, which are an integral part of their education at Annapolis, as well as a part of their orientation to the Navy on the whole. And it means that a woman graduating from Annapolis comes out with a bias against her that her male counterpart will not have to overcome. Now it is understandable why women would be barred from those vessels that could be engaged in direct combat, such

as the 6th Fleet in the Mediterranean, and the 7th Fleet in the Far East. These are potentially volatile areas, and those vessels might be faced with immediate danger. However, the limitation as it now stands, even forbids women from serving on oceanographic vessels, as well as other ships that are not in immediate combat zones. Without that type of experience, these women can never be considered true Navy officers by their peers and their careers will suffer accordingly.

PROMOTION LIMITATION FOR NAVY AND MARINE WOMEN

In addition, there is another more formal restriction that deals with the highest rank women in the Navy and Marine Corps can attain. Title 10, section 5767, paragraph C, deals with the promotion of a woman to the rank of rear admiral in the Navy, and brigadier general in the Marine Corps. This was part of a package introduced in 1967 to equalize the promotion of women in all the services. But, in practice, while it lifted some restrictions on women in the Army and Air Force, it states that a woman can only be granted spot promotions—not permanent—in the Navy and Marines. The ironic part of this is that, even if the law were to be modified to equalize promotions, a woman in the Navy still will not be promoted to flag rank command without having served on sea duty. Hence, the ability to go to sea is critical to the future of any woman in the Navy.

The legislation and restrictions that are applicable to the women in the Navy also apply to women in the Marines. Women officers in both services are, by law, promoted according to a separate structure than the one that governs male officers. There is one structure that exists for women, and another one for men. There is no way of knowing how that affects the caliber of the officers promoted.

ARMY

Within the Army, there is no legislative restriction on women in terms of the rank they can attain. A woman, however, is limited because she cannot serve in combat. Hence, it is possible that many qualified, career WACS will never attain the highest possible rank to which they are entitled because they have not served in those positions which promotion boards consider essential for career advancement.

At West Point the women cadets receive identical training. But the positions that they can accept upon commission are limited to noncombat. Not only does this restrict these women, but it restricts the men as well. Selection of jobs determined by class rank. As the women are doing well academically, it means that they will probably rank toward the top of their class Hence, they will be given first choice of the limited number of jobs available, thus forcing the men toward the bottom of the class to take not only what is left, but also what women are prohibited from, even if the women wanted those areas. Hence, both the men and women suffer in that case.

AIR FORCE

The Air Force is in a similar situation, both with the women in the academies, and in the services on a whole. In the Air Force it is not quite as extreme, because there is such a large number of men who wish to be pilots, it leaves a wider choice open to women. If the pilots positions were open to women, all men and women would be competing for these on an equal basis depending on need. Again this does not refer to women in combat missions, but merely women as pilots, serving support roles.

The argument that women in the Air Force raise is that the Air Force is structured around flight. By being barred from that area, this negatively affects a woman's career potential in the Air Force. In fact, only a pilot can serve as wing commander, and that eliminates women. Further, in the Air Force Academy, the only training that differs for men and women there is that women are not allowed to take the flight training course, as was seen with the two other services, this limits a woman from one area that she was attracted to the service for.

CAN WOMEN DO THE JOB?

Can women do the job? My answer is an unqualified yes. But you do not have to take my word for it.

A test conducted by the Army at Fort Jackson, proved that women can perform as well as men in basic training. As a result of this experiment, Army policy will change so that men and women will be receiving the same basic training.

A Navy experiment with women on board the U.S.S. *Sanctuary* indicated that women could perform successfully onboard ship. One of the Navy's conclusions from that experiment is: "Women can perform every shipboard function with equal ease, expertise, and dedication as men do."

Women Marine officers are in an experimental situation, training with men at Quantico. Preliminary results show that they are doing well.

The Air Force is in the midst of a training program for women pilots and navigators; 10 women entered the training program for pilots in August 1976, and all 10 are expected to complete the course successfully and graduate in September 1977; 10 more women have just begun this program. Thus far, no woman has dropped out of this training, and the Air Force feels that the women are performing equaliy as well as the men. Further, the completion rate for the women thus far is 100 percent, while the "washout" rate for men has been averaging around 12 percent. Of the six women who began navigator training in March 1977, five have successfully completed the first stage of their training. The sixth woman was seriously injured during training, and will resume the course with the next class.

Navy boot camps and officer candidate schools have been integrated male and female. At West Point, women are trained for, and are expected to successfully complete, combat training just as men are.

Further, all the services seem to agree that in the cases where women have been added either to a unit, or to a specific training program, the performance of the entire group increased, and standards in general have gone up.

But what does this tell us? First, it indicates that, where tried, the women have been successful in performing new, and nontraditional roles in the services. Second, it shows that women can perform up to the existing standards that had been set for men, and up to the standards currently imposed on men in the services. Third, in many cases it shows that women are prepared for, and expected to take a position of responsibility in nontraditional, as well as the more traditional areas.

Fourth, it indicates that, each of the services has initiated and responded to this changing role of women on its own, and has a trial program to see how their women would do when forced to compete and put into more difficult and atypical situations. The results have universally been that not only can women do well, but that the men also do better with the presence of women.

SKYROCKETING MANPOWER COSTS AND TEETH TO TAIL RATIOS

Mr. President, one of the serious problems facing our Armed Forces today is the skyrocketing costs of manpower. Manpower consumes well over 50 percent of the defense budget. A collateral issue has been turning more tail into teeth through the Nunn amendment and by cutting back on headquarters staffing.

The number of women in the military has increased from 30,000 in 1965 to 120,000 at present. With a more effective utilization of women, many support positions now held by men could be assumed by women with a release of manpower for direct combat roles. Furthermore if women are allowed to serve on board ship and fly aircraft in support positions when not expected to engage in combat, we can concentrate our combat pilots and ships in those areas where tensions are the highest and combat would be more likely to break out. Thus this would release highly trained personnel for the frontlines.

For example, if only a man can ferry an aircraft from one point to another, he is not available for combat duty. A woman pilot could do that job every bit as effectively.

In other words, opening up new job classifications to women will help in the teeth to tail conversion problem and most likely even will cut down on costs over the long run. How would it cut down on costs? Well, the attrition rates for women are much lower than for men. With a lower turnover rate, there are considerable savings in training.

WOMEN IN COMBAT

Does this amendment say that women will have to go into combat? Absolutely not. We do not want women to have to be subjected to the dangers of direct combat. We do not want any American, male or female, to have to experience this. Each, however, should be given a chance to attain his or her potential within the field of their choice, without unfair prohibitions imposed on the basis of sex.

It is not fair to prohibit women from areas in which she will be in no immediate danger, and in which she can both

enhance her career, and do a great service to her branch of the Armed Forces as well. This question should be looked at not only from the perspective of what the services can do to benefit women, but what can these bright, highly qualified and dedicated women do for the services? That is the question that should be answered.

This need to open more doors to women comes from the necessity to utilize this resource, as well as the movement toward social and human equality.

As the situation stands, many of the laws and policies have existed for a number of years, and have not been reexamined in light of changing social policies as well as the needs of the All-Volunteer Force. The services appear to be waiting for congressional guidance before moving on this question. This guidance can be provided through this amendment.

CONFLICTING STATUTES AND INCONSISTENCIES

Before concluding, I think it is important to look at some of the inconsistencies that exist regarding conflicting statutes and limitations pertaining to the Armed Forces. If nothing else, this proposed amendment might help to clarify these.

An example might be the WACS. WACS are trained in "defensive" combat roles and are expected to be able to defend themselves, and their units if the need should arise. Yet, they are expressly forbidden to be placed in offensive combat situations. In actual combat, there is often little or no distinction between offensive and defensive combat. Further, in 1973, Army policy was modified to allow women to serve in combat support units, provided no more than 25 percent of any unit was composed of WACS. This was deemed the maximum allowable number to keep the unit at full readiness. In case of direct combat, these women would be in danger. Yet, this utilization of women was permitted. Hence, there seems to be an inherent inconsistency in this aspect of Army policy. While this amendment will not explicitly allow women to be placed in direct combat positions, there does not seem to be any reason why women should not be permitted to be in a greater number of combat support positions such as those suggested in 1973. Further, in case of a change in the combat situation, and the need for immediate action should arise, these women would be trained and prepared to take such action if necessary.

There are cases of inconsistencies across services so that what is forbidden to women in one service is permitted to women in another. Although women are prohibited from serving on board ships, this prohibition does not apply to women in the Army and Air Force. In a similar inconsistency the Air Force claims that they permit women to serve as missile repair persons. Yet, the Army has this category of jobs, among its restricted MOS's. This could be clarified by allowing Army women to serve as repair persons on nonmobile missile systems. This would allow for uniformity, and would afford women that option as a career choice, which is currently closed to them.

DEFINITION OF COMBAT

Finally, all the restrictions and prohibitions on job choices available to women hinge very closely on a definition of combat. Most of the legislation explicitly states that "combat missions" defines those areas that a woman is excluded from. Yet there is no consistent definition of what combat is. In fact, there is widespread inconsistency as to what defines a combat mission, or what "engaged in combat" actually means. This definition has become especially critical since the battle lines of old are no longer clearly drawn. In fact, in the days of Vietnam, all service personnel assigned to Vietnam received hazardous duty pay, thus indicating that the entire nation was really defined as a combat zone. And women were among those assigned there.

The point here is quite simple. What used to be clear cut in terms of defining the front lines, no longer is. Yes, we might like women to be removed from any immediate danger. No, we might not want women to be in the offensive attack units. However, beyond that, lines have blurred. There are many more roles, in support positions, that women can and should hold. And women in the services should be able to play a larger role.

In other nations, such as Israel and Vietnam, women have out of necessity played a very active and important support role in the armed forces. While they were not among the offensive units, they have served as border guards on the Suez and in support roles similar to those I just mentioned. Even in this country, in the past when the need has arisen, women have played an active and nontraditional role in the armed services.

Test situations as well as history have shown that, in case of combat emergency, women were able to perform very well under pressure. And they can be expected to continue that trend.

The Armed Forces are competing with the private sector in terms of attracting qualified and responsible women and in keeping them. In order to do this, the services must be competitive. They must be able to offer these women more than they can get elsewhere. In short, the services must continue to provide a viable alternative.

To do this, to continue to attract the kind of women the services want we must make sure that the armed forces can offer everything possible to these women. Easing the restrictions that now exist might be one way to help see that this is done.

AUTHORITY OF THE SECRETARY OF DEFENSE

Mr. President, I want to make clear just what this amendment does with respect to women in combat positions. The amendment does not require that women be placed in direct combat situations. Obviously there are those times when noncombatants, male or female, will be involved in combat situations such as a breakthrough in the lines or emergencies or incidental occurrences that cannot be foreseen. No legislation can cover these unexpected situations.

The amendment makes it clear that the Secretary of Defense is not required to place women in direct combat. It gives him the flexibility to make decisions about job classifications. It allows him to refine and standardize the definition of combat so far as that is possible. And, of course, it does not preclude the Secretary from recommending that women have combat roles of one kind or another. In fact, the Department of Defense is studying that specific area. The Secretary still retains the authority to make such judgments about combat under this amendment. However, the issue of women in combat will have to be addressed at a later date. The intent here is not to preclude further adjustments or modifications on the Secretary's part involving women in general or combat.

Should the Secretary of Defense one day decide that women should be given unrestricted combat roles, then he could make such a determination and submit it to Congress for approval in new legislation. He retains the power to do that at any time in the future.

Since women in the Army are not prohibited from combat by law, this amendment should not be construed as placing a new prohibition against combat on them. It leaves it up to the Secretary of Defense.

Mr. President, in closing I would like to quote from General Eisenhower a statement which, I think, gives us some feeling of what we are up against with this kind of a proposal. President Eisenhower said:

> Like most old soldiers I was violently against women soldiers. I thought a tremendous number of difficulties would occur, not only of an administrative nature but others of a more personal type that would get us in trouble. None of that occurred. In the disciplinary field they were a model for the Army. More than this, their influence throughout the entire command was good.

Mr. President, I think that President Eisenhower reflects a feeling that many of us have had, men and women, about the women in the military, and his experience, which is certainly superior to that of, perhaps, anyone because of his great experience in World War II should, I think, weigh very heavily with us.

He, as I said, was opposed to women, strongly—he says violently—but he came to conclude that they could add a great deal to the military not only in the job they could do, and do well, just as well as men, but in the excellent effect they had on men in improving their conduct, too.

Mr. President, I reserve the remainder of my time.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. TOWER. I yield ten minutes on the bill to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, while I find myself in sympathy with what the Senator from Wisconsin is trying to do, and I can verify much of what he said because I have flown with women pilots in World War II, I do not believe the amendment is necessary, and I would like to state why.

At the paragraph (b) on page 2 of the amendment, and I read:

> (b) The Secretary of Defense shall define the terms "combat" and "combat mission"

for purposes of this section and such terms shall apply uniformly to all branches of the armed forces of the United States except in cases where the Secretary of Defense determines uniform application is impracticable and authorizes exceptions to be made.

Now this, to me, Mr. President, is the real problem we face, because when the Chairman of the Joint Chiefs of Staff appeared before us very early this year I brought up the subject of women in combat, and he said, "Senator, you are going to have to get a new definition for the term 'combat.' "

My staff and I have been working ever since to come up with one that would protect or keep women out of combat.

He said it for this reason, and I call my friend from Wisconsin's attention to this: "Women are not supposed to be in combat," yet in Vietnam we gave them, I do not know the exact number, over 20 Purple Hearts. Purple Hearts are awarded for wounds received in combat, and these women were not specifically assigned to combat units, but they were caught in shellings or particularly in hospitals that were rocketed or in ambulances that had been shelled.

So we face a basic need, and I am going to keep on pursuing this, of a new definition and a proper definition of "combat."

Let us see what this amendment specifically wants to do. But before that let me call the attention of the Senate to the major reason I do not think we need this. The Army now permits women to serve in 356 of 389 MOS's, which is 92 percent; the Navy assigns women to 87 of 102 career fields; the Air Force utilizes women in 449 of 459 specialty codes; and the Marine Corps assigns women to 36 of 40 occupational fields.

The only qualifications in the law that bear on the duties of women involve Navy ships and combat aircraft and Air Force aircraft engaged in combat missions; and again, what are combat missions? We might find a woman, for example, in time of war serving once again in a revived ferrying command on a relatively peaceful mission of delivering an airplane to a foreign country, but being shot down in the course of that.

We have no way of knowing what can happen. I think otherwise the secretaries have full discretion in the assignment of women, and I think we should observe this broad discretionary authority and give careful review to existing combat restrictions in the law in ascertaining what changes may be necessary.

The Department of Defense opposes the position relating to Air Force missile silo launch officers, and frankly, I could agree with the Senator on that. That is one of the suggestions of the Senator that I could go along with. It is a mighty lonesome kind of service, but the Air Force, through the Department of Defense, opposes that.

Mr. President, reading the amendment, practically every paragraph states "duty assignments not likely to be used for combat mission purposes," and this one refers to hospital ships, transport ships, and ships used for similar or related purposes.

Now, a transport ship in time of war is a target. A hospital ship is not supposed to be fired on, and this has been pretty well observed throughout our wars. Permanent duty as missile launch officers I find no complaint with. Why the Air Force opposes that I do not know.

Mr. TOWER. Mr. President, will the Senator from Arizona reflect on that for a moment and, perhaps, he will understand.

Mr. GOLDWATER. I already have reflected on it, and I can say this: If I were assigned to a missile silo I can think of nothing finer than having a woman serve with me. It might be a problem—it would be a problem with the Senator from Texas but not with the Senator from Arizona. [Laughter.]

In paragraph (3) "permanent duty assignments as pilots and navigators in aircraft not likely to be used in combat missions," again we do not know, with the new ability of our enemy aircraft as to their ability to actually fly over our shores at will, where one of our aircraft can fly with the safety of saying we are not flying in combat.

Then "permanent duty assignment as tactical communications chiefs in the Army." A tactical communications chief serves in forward sections of the Army. They are not located back of the lines. They are located in the lines for tactical communications purposes.

So, in conclusion, Mr. President, I just refer to existing law. The Navy and the Marine Corps are prevented by law from assigning women to duty in aircraft that are engaged in combat missions, and they cannot be assigned to duty on vessels of the Navy other than hospital ships and transports. That is already in the law.

The law that covers the Air Force says that. "Female members of the Air Force, except those designated under section 806(7) of this title, who are appointed with a view to designation under that section, may not be assigned to duty in aircraft engaged" again "in combat missions."

Now, Mr. President, this is the thrust of my argument. We need a new definition of combat.

About the closest that we have come to it is a woman with a 60-pound pack on her back carrying a rifle and accompanying men in actual forward positions. That is as close as I can come to actual combat, because we have probably more civilians killed in any war than we have men in uniform killed.

If it is the intent of the Senator's amendment to broaden the scope of women's assignments, I say with the figures I have read where 92 percent of the Army women now serve in MOS's that could be classified under this amendment, the Navy assigns women to 67 of 102 career fields, the Air Force utilizes women in 449 of 459 specialty codes, and even the Marines assign women to 36 of 40 occupational fields, I hate at this time to give the impression to the Secretary of Defense, whoever he might be, that we have no hesitancy in assigning a woman to a combat position.

I am not saying that a woman might not be good in a combat position, but I do not think a woman should ever participate in combat. Contrary to helping the morale of the troops—I have said this often—I would not want a woman flying on my wing because I would be just naturally more interested in her safety than my own or the objective of hitting the enemy, and chances are I would get clobbered. So, I want them back where they belong. I have always said I have nothing at all against a woman doing anything a man can do as long as she gets home in time to cook dinner. That is my attitude on it.

So I hope that this amendment is defeated. I see no real reason for it. We have had no real testimony on it except the chairman of the Joint Chiefs has warned us that defining "combat" is an almost impossible thing to do. I hope we will vote against this amendment.

Mr. PROXMIRE. Mr. President, I yield myself 3 minutes.

In response to my good friend from Arizona, let me say, in the first place, I think all of us have to delegate our military judgment often to experts, at least to some extent, and certainly the Senator from Arizona is an outstanding expert in this area. But I call attention of my colleagues to the fact that this amendment is supported by the Defense Department. I have their communication right here. It states that Defense Department supports the amendment, but recommends minor language changes to sections attached. The minor language changes can easily be made in conference. But the Defense Department wants this amendment and they support it.

Mr. STENNIS. Mr. President, will the Senator yield to me there for a question?

Mr. PROXMIRE. I yield.

Mr. STENNIS. The Senator is arguing now from a memo dated May 17, 1977?

Mr. PROXMIRE. May 16, yesterday.

Mr. STENNIS. All right. I have in my hand one dated the 17th. The Armed Services Committee had not gotten any kind of notice about this bill, so-called the Navy bill, until yesterday. We were already in debate on this bill. And I have here a memo dated today that seems to have been sent to us that says that the DOD supports the amendment in this field of personnel.

Mr. PROXMIRE. That is correct.

Mr. STENNIS. Here is my question. I have found this to be most difficult. The Senator is a fine, experienced legislator. Does he recommend that here on the floor of the Senate, on a day's or 2 days' notice, we try to work out here and put in the law, written in letters on stone, just what should be the situation about the ladies in the Navy? Is that the best way to get at the merits of it?

Mr. PROXMIRE. May I say to my friend from Mississippi that this is a matter that has been studied for a long, long time. As the Senator knows from his much longer experience in the Senate than I have had, amendments very often are offered that are of much more substance, go farther, and cost a great deal of money, and they are taken and accepted or voted by majority votes in favor of them in the Senate. It certainly is not unusual to have a floor amendment.

It is true that this amendment has not

been before the Armed Services Committee. I recognize that. I wish it had been. Nevertheless, it is an amendment, as I say, that is in fact supported by the Defense Department.

I might also respond to my friend from Arizona. He made a very strong point of the argument that most of the jobs in the Armed Services—the overwhelming majority, I think he said—are now open to women. Let me give him some facts here. Because of Air Force restrictions and interpretations about 30,000 officer billets are directly closed to women. All told about 37,000 jobs or 37 percent of the total are closed to women officers; 90,000 jobs or 1 in 5 are closed to Air Force enlisted women. Although some 445,000 Air Force jobs, or 78 percent of the total, can be filled by qualified men and women within current Air Force policy, only about 1 in 10 will be filled in fact by a woman. Furthermore, 60 percent of Navy enlisted billets are closed to women.

Mr. President, the Senator from Mississippi, of course, makes a very strong point. It is influential with all of us when he says that legislation should be considered in advance by the committee. But I wish in the years I have been here handling bills on the floor that every amendment, that comes up, when it comes up to be presented on the floor to a bill we had in our committee, had been considered previously by the committee. A very large proportion of them have not been.

I think the support for this amendment is overwhelming. The Defense Department supports it, and I hope that under these circumstances the Senator from Mississippi will take this amendment to conference.

Mr. STENNIS. Mr. President, I yield myself 3 minutes.

Mr. President, to every Member that is here let me point out: Here is a two-sheet piece of paper that says DOD position, and it is signed at the bottom ODASD/MRA&L(P&R) Ext. 79106, May 16, 1977. Then it says:

Substitute for section (a) of Senator PROXMIRE'S amendment.

That is all that is on there. There is not a name on it. There is not a name of a department. There is no verification, no identity. It is just a bunch of junk.

If the Department of Defense is going to follow the practice of sending stuff like this over here, this is notice that "we will not take anything you send; you will have to come yourself where we can cross-examine you."

I am talking now for the Senate, not the committee.

Most of the Members of this body do not want to have to pass on intensely complicated matters as this, neither for the womanhood of this Nation nor for the naval strength or naval security of this Nation, in this manner.

We had this morning two more of these notices as to who was for what and where, and within minutes there was a total contradiction, with one telephone in the Pentagon saying one thing and one another. And I walked out of the Chamber and talked to someone from the military. He went off to find out what was the trouble, and the Senator sponsoring the amendment withdrew it.

So I think, with all deference to our friend from Wisconsin—and he is a splendid man both on the floor and in the committee—the cart is before the horse.

If we are going to get an indepth weighing of testimony by competent witnesses, not just what someone may want way off yonder somewhere in an organization, and considered by competent professional staff members and by competent Members of this body—and we are blessed with them on the Armed Services Committee—and then to come back in here and make a recommendation and a report with testimony to back it up. If that is what Senators want, let us vote down this amendment and give the agency and the proper committees a chance to pass on this matter and make some kind of a recommendation. But we cannot legislate here on this memorandum stuff, and the Senator from Wisconsin certainly is not responsible for this. He took what was handed to him, but the dates show.

I will close. We have not had this so-called Navy proposal before us. It just came in yesterday. Debate had already started. There was no chance for hearing and no chance for review.

Mr. PROXMIRE. May I say to the Senator this is not from a mystery man in the Pentagon. It is from the Assistant Secretary of Defense for Manpower. That is what the initials stand for.

We have called the Defense Department and confirmed the fact that it did actually come from them. There is no question that it did. I would agree that it would be more satisfactory if they had appeared in person before the committee and submitted themselves to cross examination.

I had hoped that there would be overwhelming support for this kind of an amendment, since it was requested by the Defense Department and since it is so obviously does work in the direction of equal justice.

Mr. President, will the Senator from Mississippi yield back his time so we can get a vote on this?

Mr. STENNIS. I will not yield back any of it now.

Mr. NUNN. Will the Senator yield?

Mr. STENNIS. How much time does the Senator want?

Mr. NUNN. Three minutes.

Mr. STENNIS. I am glad to yield 3 minutes.

Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Mississippi has 27 minutes. The Senator from Wisconsin has 13 minutes. The Senator from Georgia is recognized for 3 minutes.

Mr. NUNN. Mr. President, I share the concern expressed by the Senator from Mississippi regarding the Proxmire amendment. I really think at the appropriate time, after appropriate hearings, that I personally, the junior Senator from Georgia, would favor the Proxmire amendment. I certainly favor the thrust and direction in which he is going.

I believe we are going to need to use more women in the military services. I believe that is an area of great opportunity. I believe one of the opportunities to do a better job with the volunteer force than is now being done is to expand the number of jobs that women can hold in the military services. But we simply have not had a chance to have hearings on this subject. We have just received the bill in the full committee from the Navy. We have not had one moment of hearing on it. We have not had the first witness. We do not know about the problems that may be created.

I believe if there is anything Congress has demonstrated over the last 10 or 15 years it is that we usually live to regret amendments that come up on the floor when there have been no hearings and when we do not know anything about them.

They sound good. They have the right kind of theoretical title to them. They have all the code words about equality, and so forth, and so on, and yet we really do not know what they do.

We have learned here in a very interesting dialog about some of the capabilities and probable behavior of the Senator from Arizona and the Senator from Texas under certain conditions, but we have not really learned much about the Proxmire amendment. I think all of us probably would like to know more about that amendment.

We probably might also learn more about the Senator from Arizona and the Senator from Texas, too, if this dialog continues. I am not sure that is relevant as to what the Senate ought to do under this amendment.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I yield an additional 2 minutes to the Senator, Mr. President.

Mr. NUNN. I would like to propose as a substitute, and at the appropriate time I will propose as a substitute, in lieu of the Proxmire amendment, the following language, which at the appropriate time I will send to the desk. I read the proposed substitute:

At the appropriate place in the bill insert a new section as follows:

For the purpose of promoting quality and expanding job opportunities for the female members of the Armed Forces, the Secretary of Defense shall within 6 months from the enactment of this section, submit to the Congress a definition of the term "combat" together with recommendations on expanding job classifications to which female members of the armed services may be assigned, and recommendations on any changes in law necessary to implement these recommendations.

At the appropriate time, Mr. President, I will ask that the Senate vote on this amendment in lieu of the Proxmire amendment. I thank the chairman for yielding me time.

Mr. STENNIS. I thank the Senator.

How much time does the Senator from Texas wish?

Mr. TOWER. Just 1 minute.

Mr. STENNIS. I yield such time as the Senator from Texas wishes. May we have order, Mr. President?

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. TOWER. Mr. President, this

amendment would write into law a few selected job classifications in the various services. That is something we have not done in the military authorization bills. I do not think it is appropriate for Members of the Senate to try to write and describe job classifications for the services. That should be left to the professional military men or the civilian leadership of DOD.

This amendment mentions silo launch officers and communications chiefs. Why not loadmasters or flight engineers, or boatswain's mates? If we want to legislate assignment policies for specific skills, why single out only a few areas?

I think this is a bad precedent to set, getting into the business of trying to write military job descriptions into a military authorization bill. For that reason, if none other, I would hope that the amendment would be rejected.

As the Senator from Georgia suggests, we probably do not have an adequate understanding of what the definition of the term "combat" really is. I was taught that there is no rear echelon in the Navy. Any man assigned to a naval vessel, whether he is a yeoman, a storekeeper, or whatever he is, a cook, a baker, has a combat assignment aboard that vessel. When a naval vessel fights, there are no noncombatants. The whole ship fights, regardless of what one's job description is. In terms of auxiliary vessels, they can be brought into combat situations. Any ship that is a blue water ship is potentially a ship to be involved in combat whether it is armed or not. I think we would all be interested to know more about how the term "combat" is to be defined by the professional military men before we act on an amendment of this type.

Therefore, I would think the suggestion of the Senator from Georgia is well taken.

Mr. STENNIS. Mr. President, I yield myself 1 minute.

The Senator from Georgia did not identify himself in the talk he made. The Senator from Georgia is chairman of our Manpower Subcommittee. We ought to change that title a little and add ladypower, too. (Laughter.)

Mr. PROXMIRE. Mr. President, I yield myself 3 minutes.

First, Mr. President, I would point out there has been extensive study of this matter. There were 2 years of study of women in the military academies with hearings, extensive hearings. I have a list before me of a number of pages of studies of women in the Armed Forces, at least 50 or 60 studies which have been made.

Mr. President, I recognize the Senator from Mississippi, the Senator from Georgia, the Senator from Texas, the Senator from Arizona, and others have made an excellent point. As the Senator from Georgia says, we should have a study. We should do it deliberately.

With reluctance, I am happy to modify my amendment by accepting the Nunn proposal as a substitute for my amendment. I think I am free to do that since the yeas and nays have not been ordered. I worked out a little different language than the Senator from Georgia read to the Senate. Will he read the language again?

Mr. NUNN. I will be glad to read this language.

The proposal would be in lieu of the Proxmire amendment to read as follows:

At the appropriate place in the bill insert a new section as follows:

For the purpose of promoting quality and expanding job opportunities for the female members of the Armed Forces, the Secretary of Defense shall within 6 months from the enactment of this section, submit to the Congress a definition of the term "combat," together with recommendations on expanding job classifications to which female members of the armed services may be assigned, and recommendations on any change in law necessary to implement these recommendations.

Mr. PROXMIRE. Mr. President, I understand in the parliamentary situation I have to yield back my time on my original—I guess I do not have to do that.

The PRESIDING OFFICER. The Senator has the right to modify the amendment at this point, and the amendment is so modified.

Mr. STENNIS. I commend the Senator from Wisconsin, Mr. President. I highly commend him for accepting the idea of a study that will get into this subject. We will certainly try to respond in the best way we can to him and the Senator from Georgia for working out this substitute. The bill we were talking about does not have anything to do with this subject we will get into.

Mr. TOWER. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. I yield.

Mr. TOWER. If the Senator from Mississippi is prepared to accept the amendment of the Senator from Wisconsin, as modified by the suggestion of the Senator from Georgia, in behalf of the minority we are prepared to accept it, too.

Mr. STENNIS. I thank the Senator from Texas. I gladly accept the suggestion or the proposal and support the substitute.

Mr. PROXMIRE. This was implied but it has not been expressly stated. I would appreciate it if the Senator from Mississippi could inform the Senate whether or not he would expect to schedule hearings on the recommendations of the Secretary of Defense when he sends them up in 6 months or so?

Mr. STENNIS. If he signs the recommendations, we shall certainly give them consideration.

I thank the Senator from Georgia. We have been talking with each other and with others on the committee and with the Senator from Wisconsin about hearings. We shall go into that. I am not in a position to promise it now. I am not trying to kill the measure or the amendment as such. Whatever merit it has, it has to stand on.

Mr. PROXMIRE. I do not want to put it off for another year. If it comes up in 6 months, we can make progress before this Congress dies and enact it into law.

Mr. STENNIS. My disposition would be to try to go into it, yes.

Mr. NUNN. What is the new name of my subcommittee, I ask the chairman?

Mr. STENNIS. We have to be careful of words.

Mr. NUNN. The Personnel Subcommittee intends to continue our review of the All-Voluntary Force, and certainly, as an important part of that, the role of women in the service will be a part of that scrutiny. We shall give careful attention to this matter in hearings. Whether we have a whole set of hearings specifically on this point, or whether it will be part of the overall effort to see if the All-Volunteer Force can be improved and whether there will be a long-term answer to our personnel policies, we shall certainly give the issue due consideration.

Mr. PROXMIRE. I appreciate that very much. I am sure the Senator understands that the Senator from Wisconsin reserves the right to bring this proposal up again in the event that there is no action on it for a year or so.

Mr. NUNN. I certainly understand that.

The PRESIDING OFFICER. Is all time yielded back on the amendment?

Mr. STENNIS. I yield back such time as I have.

Mr. PROXMIRE. I yield back my time, Mr. President.

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified, of the Senator from Wisconsin (Mr. PROXMIRE).

The amendment, as modified, was agreed to.

Mr. TOWER. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. STENNIS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. STENNIS. Will the Chair indulge me for just a minute? I suggest the absence of a quorum, but just for 1 minute or less.

Mr. TOWER. I ask unanimous consent that the time consumed be charged to neither side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, we have an amendment to be offered by the Senator from Tennessee (Mr. BAKER). The Senator from Iowa is waiting here. He has another complication. I do not know where the Senator from Tennessee is just now.

There was some talk that we might go off on a colloquy. I do not know. I am not stating anything.

So far as I am advised definitely, those are the last amendments. There has been one matter mentioned to me by the Senator from Georgia and the Senator from Florida.

If we can call the Senator from Alaska in, and the Senator from Maryland had mentioned a matter to me—I do not know if it ever took the form of an

amendment or not—we are right down almost to the end. If the Baker amendment is not offered, so far as I know, there perhaps will not be any further debate—not much, anyway.

I do not want anyone to make any other plans just on my uncertain statement.

Mr. TOWER. Mr. President, I suggest the absence of a quorum. I ask unanimous consent that the time consumed be charged to neither side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT 274

Mr. BAKER. Mr. President, I call up my amendment No. 274 and ask that it be considered.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read as follows:

The Senator from Tennessee (Mr. BAKER) proposes an amendment.

Mr. BAKER. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 51, line 23, strike "$95,250,000" and insert in lieu thereof "$134,800,000".

The PRESIDING OFFICER. There is 1 hour on the amendment, to be equally divided.

Mr. BAKER. Mr. President, I yield myself such time as I may require.

The amendment is two lines long and simply requires that on page 51, line 23, the figure $95,250,000 be stricken and there be substituted the figure of $134,800,000.

This, of course, has to do with the funding level of civil defense. I do not intend, Mr. President, to ask for a rollcall vote on this amendment. I wish to elaborate and discuss my reasons for offering it, and to express the range of my concerns about it.

I recognize that, at this point and on the floor, it is unlikely that I shall be able to succeed with this amendment in this way. I urge, however, that when the bill is passed by the Senate, it go to conference with the House of Representatives, and that the conferees take account of the disparities between the Senate bill as it is likely to pass and the House bill as it has already passed.

Mr. President, civil defense in the minds of many conjures up an image of backyard bomb shelters. Civil defense in the eyes of some conjures up the image of storehouses full of medicine, clothes, water, and other emergency supplies. Some think of it as a dual purpose system that will serve us in the event of national disaster and great social distress.

All of those concepts are, to one degree or another, accurate and certainly useful. But my own view and concern for civil defense in its primary scope extends beyond that, especially since the advent of a substantial increase in Russian attention to the civil defense program created primarily for the evacuation and dispersal of industry.

It seems to me that civil defense has become a part of the essential balance between the military capability of the United States and that of the U.S.S.R.

To paraphrase the language of one distinguished scientist who is conversant with the subject, the paradox of the time may be that civil defense, which is thought of as a defensive mechanism and purely passive, may in fact, be active, and the most significant and potential destabilizing force in the mutual balance of terror.

It requires no particular attention to the imagination to conjure up in the mind's eye a situation where the Russians could methodically evacuate much of their population from their city centers while the United States could not, and in the course of a comparatively short time be able to say to us that the number of Americans held hostage to the Russian nuclear threat and the number of Russians held hostage to the American nuclear threat were no longer equal; and while previously there might have been as many as 60 million, 70 million, or 80 million Russians that would be the victims of an American retaliatory strike, that now there were only 10 million or 15 million, while the American number might still remain at 70 million or 80 million.

What the reaction of the U.S. Government might be in those circumstances, it seems to me, is unpleasant to contemplate, and at least uncertain as to its imported ramification. That is not to say the addition of this money will either cure the deficiency or eliminate the possibility; but, rather, to say that with the addition of this money to this bill we can signify our intention to give fresh and renewed attention to the question of civil defense, both in its dual purpose role and in terms of our reexamination of its usefulness in terms of our balance of power.

So, Mr. President, I have offered this amendment to increase the authorization for civil defense for this country from $95,250,000 to $134,800,000, which is the figure authorized by our colleagues in the other body. I believe this is a modest increase and that if adopted the total would still be modest.

I would ask my colleagues, Mr. President, to compare that figure to the estimated $4 billion the Soviet Union spends every year for civil defense programs.

There is an obvious disparity there, Mr. President; and I, and I believe many of my colleagues in both Houses of the Congress, find that disparity alarming. It is one about which we have talked a great deal, but done very little.

As we all know, adding $35 million to this authorization will not cure the problem; but it will put the administration on notice as our colleagues in the House already have done, that we, the Congress, are concerned—that we believe the time has come, and, in fact, long since passed, when serious consideration should be given the strategic ramifications of this disparity.

As I have stated many times before, my concern is that we have allowed a serious imbalance to develop in the respective strategic postures of the United States and the Soviet Union. If, through an effective civil defense program, the Soviet Union has been able to minimize the destructive prospects of nuclear war, then the concept of mutual deterrance is seriously degraded.

I notice, Mr. President, an article in this morning's Post regarding the report of the Joint Committee on Defense Production entitled "Civil Preparedness Review." I by no means reject out of hand the conclusions of the report and, in fact, commend the committee for its efforts to pull together the various aspects of civil defense and emergency preparedness and their relationship to the strategic balance. On the other hand, I cannot accept the conclusions of the majority portion of that report, at least as it relates to the civil defense program of the Soviet Union, and find myself far more in agreement with the minority views of Senators TOWER and BROOKE and Congressmen BROWN and WYLIE.

I believe the jury is still out on the effectiveness of the various civil defense programs of the Soviet Union, but there is no question that they continue to make massive investments in this area, that they consider civil defense an essential element of their overall military posture and that we would be remiss if we did not consider the strategic implications of the Soviet programs. I believe we have to consider their efforts; we have to consider the possibility that the leaders of the Soviet Union might have a different perspective on the acceptability of projected results in a nuclear exchange than we do; we have to consider their perceptions of what those results might be and not depend merely on our own analysis; and we have to remember that the issue is simply too important to dismiss with an offhand remark about returning to the age of air raid warden's tin hats and back yard fallout shelters.

Finally, I would endorse the conclusion of the minority that the United States should not attempt to establish the mirror image of the Soviet civil defense program; regardless of the effectiveness of the Soviet Union that quite likely is not the direction we would wish to take; and, obviously, my amendment would make no pretense of doing so.

This amendment is designed to do two things: First, to say that if there is even some degree of effectiveness to the efforts of the Soviet Union then the trend is alarming, and if the strategic balance is not now destabilized, it will be at some point in the future. By my amendment, I want to indicate that I believe now is the time to begin addressing that potential for imbalance.

Second, my amendment is designed to indicate my concern that for too long we have allowed the entire civil preparedness efforts of the United States to continue in a disorganized, fragmented, ineffective manner. For too long, we have proceeded with ill-defined concepts

and a minimal understanding of the proper relationship between the Federal and the State and local governments in providing for the emergency preparedness of the American public. The time has come to streamline and consolidate the Federal structural organization and to define the mission of that organization in terms of total preparedness for either natural or manmade disasters.

I understand that there are hearings tentatively scheduled by the Senate Armed Services Committee on the former of these objectives at some point during the summer following the completion of the CIA study of the effectiveness of the Soviet Union's civil defense programs. I endorse wholeheartedly the holding of these hearings, look forward to their occurrence, and to reading the testimony and the report of the committee.

Moreover, I understand that Senator PROXMIRE and Senator HUDDLESTON, as well as Representative BRINKLEY and perhaps others, have legislation pending that will accomplish the latter of these objectives, and I likewise endorse their efforts in these areas.

I hope that hearings can be scheduled on these proposals at an early date. Of course, I look forward to the beneficial results that would come from such hearings on these important problems.

Mr. HUDDLESTON. Mr. President, will the Senator yield?

Mr. BAKER. I yield to the distinguished senior Senator from Kentucky.

Mr. HUDDLESTON. I thank the distinguished Senator from Tennessee.

While I have reservations about his suggestion that the amount of money be increased for this appropriation at this time, he certainly has raised some very important points that it is time for Congress to consider and the people in the country to consider relative to our civil defense and the preparedness of this country to meet disasters, whether natural or caused by an adversary.

In the last few months, we have come through a number of disasters in various sections of the United States. We have had drought; we have had tornadoes; we have had flooding. In each case, the response of the Government in trying to help our citizens meet the difficulties caused by these disorders has not been well organized and has not been effective. It is partly for that reason that I have introduced legislation that would attempt to consolidate our civil defense effort in order to be able to meet these kinds of problems as they come about and at the same time prepare us for any nuclear threat that might be posed by any foreign enemies.

I had hoped that by this time we would have had before the Senate for consideration a civil defense effort, and that we would be able to act forthwith to bring it in line with what the needs actually are, from a defense standpoint and from the standpoint of meeting the problems that our citizens are confronted with when disasters strike.

That measure is in the Armed Services Committee. There are jurisdictional problems, I think, with any effort to bring together these problems. The Armed Services Committee certainly is involved, as are the Governmental Affairs Committee, the Committee on Energy and Natural Resources, and the Committee on Environment and Public Works.

So I think we should have some understanding—I would like to see us achieve some understanding, if we could—from the distinguished members of the Armed Services Committee, who are concerned with this problem, as to whether or not we could expect to move forward as quickly as possible and try to develop the kind of system that will be effective and that will represent an efficient expenditure of public funds in trying to achieve the objective we all want.

We certainly want to be prepared to the fullest extent possible in order to meet any kind of foreign threat to this country, but it seems to me that we can achieve that best by also being prepared to meet natural disasters that are visited upon our people from time to time.

The distinguished Senator from Iowa, I know, is interested in this problem and is concerned with it; and I hope that he feels that it would be appropriate, in all possible haste, to begin reviewing the proposed legislation, looking toward coming to the Senate with a plan that will be effective in this regard.

Mr. STENNIS. Mr. President, if I may intervene, I yield the Senator from Iowa such time as he may wish to use.

Mr. CULVER. I thank the distinguished chairman for yielding.

Mr. President, I also wish to express my appreciation to the Senator from Tennessee for raising this important issue and to express my appreciation for his consideration in affording an opportunity for a colloquy on this important subject, rather than perhaps going to a vote on this additional dollar request.

I say to the Senator from Tennessee that this was the first year, as a result of an amendment to the statute last year, that the Armed Services Committee considered, for specific authorization, the Defense Civilian Preparedness Agency's request. As chairman of the General Legislation Subcommittee, we did have this year—prior, of course, to the presentation of our bill to the Senate—hearings on their request.

I believe it is important for Senators to be aware that both President Ford and President Carter, after reviewing the state of the Soviet civilian defense program, were agreed in their recommendation to Congress for a $90 million program. That was the request that came to us.

It also is important to keep in mind that that $90 million figure was not picked out of the thin air but was felt to be tailored properly both to our own civilian programs and to a monitored identification of the pace and nature of the present Soviet capabilities in that area.

Mr. President, the subcommittee held 2 days of hearings on this $90 million request. We heard from the Central Intelligence Agency in a full day of briefings on this subject. The U.S. intelligence community appears to be in general consensus with regard to the current capabilities of the Soviet program.

The Soviet Union has always emphasized defense heavily in their whole planning, whether it be of a conventional or a strategic character. The intelligence community is agreed that the Soviets are placing consistent attention to the protection of their political leadership and a small industrial cadre, but apparently they have not been involved in a massive program to protect population of a general nature, and if in fact they were to do so, it would be different in character from any of their previous program history.

At the same time, they have acknowledged that there are certain uncertainties about the program. They are in agreement that they see no evidence of a crash program, but they see some steady developments that they do wish to monitor closely, on which they currently are in the process of getting the hardest possible fix, to verify the intelligence estimate upon which this $90 million program request initially was made.

As the Senator from Tennessee has mentioned, they are in the process of such a review currently. It is true that our subcommittee and the full Armed Services Committee will look at that program and continue to do so very closely, to avoid destabilizing implications and potentials, if in fact this should become a massive program accelerated on a crash timetable. We see no evidence of that today, but it is certainly important to watch it very closely, and we intend to do so.

Second, we also have received testimony that we presently have an incredible arsenal of retargeting and targeting capabilities in our strategic stockpile, which, with our degree of accuracy, would more than offset anything that we can see, or that we can anticipate.

One has to make a cost estimate decision, in terms of our strategic national security program planning, as to what is the best response for the United States, faced with these facts, in terms of the efficiency and the most cost-effective way to maintain a credible deterrent and guard against misadventure or miscalculation or misperception in terms of the Soviet program, in the sense of the Soviet ability to involve themselves in a nuclear exchange and still survive.

Also, Mr. President, the subcommittee looked very closely, in addition to these intelligence estimates and Defense Department responses to the known evidence, at the activities of the DCPA in our own Government. Frankly, as we know, this has been a program in the history of nuclear capability in which there has been a great deal of vacillation, fits and starts, ambiguity, and certainly lack of consistency in our program effort and priorities.

When we had these Department witnesses before us, the new Director, Mr. Tirana, said, in effect, "I cannot handle any more money."

Moreover, there was a General Accounting Office report on that agency which showed an incredible problem of mismanagement in terms of the administration of that program and its per-

sonnel and its allocation of funds, and so forth.

So I assure the Senator from Tennessee that the committee looked very closely at that. We also probed. We found no area in the $90 million that we felt was justified in being cut. We did, however, find three areas where we have recommended an increase to the Senate, totaling just over $5 million: $2 million to improve the communications system, to automate it, computerize it, so that we do have a more reliable system and do not have to rely on some of the manual practices currently required for this purpose.

We are also addressing the problem the Senator from Tennessee noted in terms of the question of hardening the industrial economic base. The Senator cited the report of the joint committee that was cited in the morning paper.

It was interesting, I think, that those three members who dissented from that also dissented because they felt these areas should be studied further; but they did not necessarily call for more money at this time.

The full Senate Armed Services Committee agrees with that, and we have earmarked $1,250,000 to study industrial and economic survivability techniques in a research and development program: what can we do in cooperation in research on the industrial side with the private sector and the Government in taking steps to harden industry with dirt, design, and so forth, that would be relatively inexpensive but should be considered for new facility construction and in some of the existing sensitive areas of our national economy that would be critically important in terms of recovery.

We are providing money for that as an increase. We are also providing another $2 million for planning money for the relocation in crisis situations.

So what we have done, I want to assure the Senator from Tennessee, is to take this $90 million, to try to see if there are any soft spots—we do not think there are any. We also carefully tried to prioritize these three areas that we do think meet some of the legitimate apprehension and concern that the Senator from Tennessee has expressed, and we think that by adding that money and giving that focus and direction to this department, under new leadership, that there will be a wise expenditure for programs, and we will avoid throwing money at the problem. We will at least have the data base upon which to make informed decisions at a later date.

Finally, I wish to assure the Senator from Kentucky, as well as the Senator from Tennessee, that we will be holding hearings this summer on this same general subject, including those other proposals of a jurisdictional nature that we have authority over for review and consideration. We will be working closely with that department, which has an enormous internal management problem, because these matching funds oftentimes are being applied not on the basis of priority need but on which State happens to come up with the money. We are going to be working with them as well as the intelligence community to try to have a responsible program that does not respond to fear or rumor or unfounded suggestions, but one, rather, that is considered and based not only on the most cost-effective response in the United States but, most importantly, one that best assures our national security interests.

I thank the Chair.

I ask unanimous consent that some prepared remarks summarizing the committee's recommendations on civil defense be reprinted at the conclusion of these remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE RECOMMENDATION ON CIVIL DEFENSE

The Committee on Armed Services has recommended $95,250,000 be authorized for fiscal year 1978 for the Defense Civil Preparedness Agency, that arm of the Department of Defense responsible for the Federal civil defense effort.

With the adoption last year of Section 804 P.L. 94–361, this was the first time that a separate authorization of the Defense Civil Preparedness Agency has been required. That amendment to the Federal Civil Defense Act last year was intended to focus some of the concerns expressed about the pace of Soviet efforts in this area and the potential threat some of these activities represented to the strategic balance. There is agreement in the Committee that the separate authorization requirement for the civil defense program will provide greatly needed Congressional oversight and direction for the civil defense program.

The General Legislation Subcommittee of the Committee on Armed Services held two days of hearings on civil defense. The Subcommittee concentrated on what was felt to be the two most important issues in reaching our recommendations for the budget markup: first, what is the Soviet Union doing in this area? and, secondly, what is the present plan of the Federal agency responsible for our own effort and planning?

We had the intelligence community, as represented by the CIA, present its findings, and we learned that there is a general agreement on current Soviet capabilities but there are uncertainties which are being closely studied by the intelligence community.

The CIA advised us that the Soviet Union has always emphasized civil defense, has stressed protection of the leadership and industry rather than the general population, and the current activities show steady progress rather than a crash program in this regard.

In my view, the Soviet activities certainly require continued and close monitoring. However, the United States presently possesses retaliatory capabilities and offensive target systems in the strategic area which are more than adequate to deal with any existing capabilities on the Soviet side or any capabilities that would presently appear to be within their potential to develop.

Turning to our own effort, the review of the U.S. program found an agency, DCPA, that is just beginning to sort out its own priorities. Civil defense has been an issue where there has been considerable vacillation as to the federal government's judgment as to the appropriate role and policy in our overall defense planning.

The Defense Civil Preparedness Agency has recently been subjected to a General Accounting Office study which provided examples of serious mismanagement of the program. For example, equipment purchased and personnel paid with federal funds on occasion were used for activities not related to disaster in the event of nuclear attack contrary to the intent of section 804 in last year's authorizing legislation.

The new leadership in the Agency assures us that they are planning a careful review of all activities to insure that funds go where they will do the most good, because, currently with the current Federal/State 50–50 matching program, often times, some areas that are exposed to the highest risk of nuclear attack are neglected while others in exposed areas receive funding because of their ability to come up with the matching funds.

Presidents Ford and Carter have reviewed this budget that has been requested and both recommended $90 million as adequate. We found no obvious budget areas that commend themselves for cuts in this $90 million recommended figure. But we did feel that there were identifiable to our satisfaction three areas which warrant modest increases in the DCPA program for fiscal year 1978.

First, we strongly recommend that an initial review of this Nation's economic recovery capabilities and related questions be undertaken in fiscal year 1978. $1.25 million has been recommended to be authorized for this purpose. The study for which these funds are provided would seem of particular value because neither the Defense Civil Preparedness Agency nor other elements of the executive branch charged with the responsibility for industrial survival in the event of attack have done the research to understand clearly the problem of economic recovery. It is felt this research and development funding will clarify public discussions about the feasibility and utility of industrial survival.

Second, an additional $2 million is recommended in order to intensify planning for nuclear civil protection including relocating urban populations in a crisis and protecting remaining essential service personnel in shelters in existing buildings. This intensified investigation would assist in clarifying the feasibility of civil defense capabilities.

Third, two million dollars is recommended to be authorized in addition to the President's request to purchase automatic computerized message transmission equipment for the eight Regional Emergency Operating Centers. It seems particularly important in a period of crisis that the national command authority have a direct and certain communications link with both the Regional and State Emergency Operations Centers.

We discussed with the DCPA each of these increases. They indicated to us that they did not have the capability to use efficiently any additional funds in each of these three program areas.

In analyzing available budget options, we sought to avoid premature commitment of funds to programs which would require substantial increase in funding in later years. We also wished to give the new Administration more time to sort out its own plans and provide additional alternatives. Finally, it is worth noting the Committee's recommendation on DCPA was adopted without dissent, and that interest has been expressed by members of the Armed Services Committee about the extensive oversight hearings which will be held later this year. By that time, it is hoped that the intelligence community will have had an opportunity to complete its individual review of the findings on the Soviet civil defense program and the Administration will also have completed its internal review of the priorities and program needs.

Mr. STENNIS. Mr. President, I yield myself 2 minutes. May I have the attention of the membership.

The PRESIDING OFFICER (Mr. LEAHY). The Senator from Mississippi.

Mr. STENNIS. I have listened with great interest here to what has been said by the Senator from Tennessee, the Senator from Kentucky, and the Senator from Iowa, and others who might have put in a word.

I certainly agree as to the seriousness of this matter. We had hearings with the CIA, among the very first meetings of our full committee in January, with reference to the civil defense part of this matter in the Soviet Union. We had additional hearings of the General Legislation Subcommittee.

I got a briefing this morning, not knowing what might come up here in debate, but we have it on our minds.

I listened to what the Senator from Iowa said about the added matters that do not pertain directly to civil defense, and I listened to the Senator from Kentucky, and I think we have had a good debate.

I want to assure the Senate, though, that this matter is being considered, is being gone into, that it is being kept up with.

There is some difference of opinion with the intelligence agencies, and so forth, but I think we know pretty well what the situation is.

Mr. HUDDLESTON. Mr. President, will the Senator yield for a moment? Does the Senator feel he believes the committee will take into account the concept that was expressed by Mr. Tirana, as a matter of fact, yesterday, that natural disaster planning and response go hand in hand with nuclear preparedness and should be an integral part of our civil defense efforts?

Mr. STENNIS. Frankly, I think a lot has to be determined in that field yet before we can have a firm conclusion as to how far we would go in blending the two. Certainly natural disasters, and so forth, are serious and deserve some attention, and a lot of that work could be in common. But if we are going into a civil defense that costs us many, many billions of dollars, I would be concerned that we get the competence, the hard core competence, of the men and women who look after that kind of work. But this other point also comes in, and it will be developed and will be weighed along with it as we get into it.

Mr. HUDDLESTON. The installation has been reduced, of course, and we will attempt to move in that direction, but apparently the administration is now endorsing that concept and suggesting that they do, in fact, go hand in hand, and possibly the best policy will be one that will embrace both problems.

Mr. STENNIS. That could certainly be approached and weighed and a conclusion reached about it.

Mr. HUDDLESTON. If we could be assured that there will be hearings and studies of the legislation——

Mr. STENNIS. It will be related, and the Senator from Iowa has expressed his opinion.

Mr. HUDDLESTON. I thank the Senator.

Mr. STENNIS. I just advise caution now in going into it in a big way, and going on the right track.

Mr. BAKER. Mr. President, I yield to the distinguished Senator from Texas.

Mr. TOWER. Mr. President, I will be very brief. I just wanted to express my appreciation to the distinguished Senator from Tennessee for focusing attention on this matter. I think it is enormously important.

The Senator from Tennessee had alluded to a report that was issued by the Joint Committee on Defense Production with which I disagree. I think it takes the whole matter of Soviet defense efforts too lightly. The Senator from Tennessee has pointed to the minority views expressed there, and I want to simply say that while the civil defense efforts of the Soviet Union do not necessarily indicate a willingness to go to war, I think what this could ultimately lead to, if the Soviets felt reasonably well-assured that they could protect a significant portion of their citizens, is that the idea of nuclear war would become far less unthinkable to the Soviets than perhaps it is now.

We do not know to what extent it is really unthinkable to them now, and remembering they do not place the value on individual life that we do here in the United States, given the ability to protect a significant portion of their population, I think that the nuclear threshold could be significantly lowered.

If indeed they continue on this course of expanding their civil defense capability, I believe we must think very seriously in terms of the potential for a first strike against the United States. I am not saying they have a first-strike policy or first-strike mentality, but I am also saying I am not sure they will not have at some point in time.

I thank the Senator from Tennessee for focusing on this problem.

Mr. BAKER. Mr. President, I express my appreciation to our colleague from Texas. He is vitally interested in this subject. I was much intrigued with his remarks and the remarks of those who joined him in the minority views in the report to which he referred.

I express my thanks as well to the distinguished Senator from Iowa for his remarks and his expression of willingness to consider this matter further as we proceed and to have further hearings; my thanks to the Senator from Mississippi, the distinguished chairman of the committee, for his understanding of the breadth of the problem; and my special thanks to the Senator from Kentucky for indicating that the matter will be examined still further and expressing his sympathy in support for assessment of the seriousness of the problem.

Mr. President, with that and with the colloquy that has now ensued, and judging that this is adequate to underscore my concern in this respect and to restate my ambition that the matter be examined more fully, I am prepared at this time to withdraw the amendment, if there are no other requests for time.

The PRESIDING OFFICER. Without objection, the amendment is withdrawn.

Mr. STENNIS. Mr. President, I again thank the Senator from Tennessee for his handling of this matter.

The PRESIDING OFFICER. Who yields time?

Mr. CHILES. Mr. President, I first ask unanimous consent that Ron Chiodo, of my staff, be allowed to remain on the floor during the consideration and vote on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHILES. Mr. President, I briefly bring to the attention of the Senate one aspect of this year's defense authorization as to which I believe the distinguished chairman from Mississippi (Mr. STENNIS) deserves special recognition and appreciation.

In the committee report on page 19 Senators will see a new section, "Analysis by Mission Category." The chairman and I have talked in the past about the benefits of taking this "mission" approach to the budget, asking to see where our dollars are going for end-purpose defense capabilities. The chairman wrote me a letter in January saying he was going to have hearings on major mission areas, which he did, and the report reflects this new mission approach.

We have a new emphasis on mission need for our new weapons acquisition policies in OMB circular A–109.

Mr. STENNIS. Mr. President, may we have order? We cannot hear the Senator. He is about 5 feet from me, speaking in more than average volume.

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Florida may proceed.

Mr. CHILES. We have a new emphasis on mission need for our new weapons acquisition policies in OMB circular A–109. The Budget Committee, under the leadership of Senator MUSKIE and Senator BELLMON, has also tried to focus on defense missions and other mission needs.

Next year, the law requires a new mission budget to come to us from the Pentagon with categories which go beyond those in this particular report.

But I just want to stand here to offer my personal thanks and appreciation to the chairman for his efforts to bring about the best and most appropriate means for this body to fulfill its important responsibilities to understand the defense budget.

He is serving us well.

Mr. STENNIS. For the committee and our staff I thank the Senator, and I thank him for the original suggestion that he made in this field.

Mr. CHILES. Mr. President, I send to Mississippi.

UP AMENDMENT NO. 215

Mr. CHILES. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Florida (Mr. CHILES) proposes an unprinted amendment numbered 215:

On page 39, lines 15 and 16, strike, "$4,061,665,000" and insert in lieu thereof, "$4,074,665,000."

Mr. CHILES. Mr. President, this amendment would add $13 million to the Navy R.D.T. & E. account for the SIRCS program. The original budget request, which was approved by the committee, was $3.9 million for this project, which is to develop a shipboard inter-

mediate range combat system for Navy ships for the mid-1980's time period. There is $3 million to be allocated specifically to contractor studies of the SIRCS and air-to-air AMRAAM missile requirements to see if they can be combined and a single missile produced to satisfy both operational needs.

The SIRCS program has been formulated under the new guidelines of OMB circular A–109 and it involves private industry in formulating system requirements right from the beginning of the program.

While I feel strongly that the A–109 concept is providing the Navy with a needed new approach to define system requirements for SIRCS, I also acknowledge the committee's concern that the development of the SIRCS program uncoordinated with others possibly could lead to a duplication of the missiles in the future time period.

I have worked with Senator CANNON of the Tactical Air Subcommittee on this matter and we have reached an agreement that the $13 million to be added by my amendment, $3 million is to be allocated specifically to contractor studies of the SIRCS and air-to-air AMRAAM missile requirements to see if they can be combined and a single missile produced to satisfy both operational needs. The other $10 million is to be allocated to the SIRCS program to allow the Navy to move this program forward at a more normal pace during the upcoming fiscal year. I think that this amendment will be responsive to the committee's position and also to my own concerns that the SIRCS project will move along at a reasonable pace.

My Subcommittee on Federal Spending Practices has worked on weapons reforms for 3 years now. The reforms come from the unanimous recommendations of the Congressional Procurement Commission.

That is where SIRCS stands today. It has received rave reviews from the Navy, the industry and the program office. I have personally spent considerable time studying its progress so far.

The Navy has testified that SIRCS would require $22 million to proceed with full competitive exploration. This amendment, in bringing the total funding for SIRCS to $13.9 million would at least permit more advanced design development of software, radar, and fire control systems, while the issue of possible commonality of the missile with other possible missions is fully addressed by the Pentagon.

It should be perfectly clear, though, that we expect programs for the air-to-air missions also will be conducted in compliance with the A–109 procedures. In fact, the distinguished Senator from Arkansas (Senator MCCLELLAN) has written to the Pentagon for a review of major systems acquisitions, including AMRAAM and others to see that they do comply with this most important OMB circular.

I want to say, however, that this compromise does not help the problem. I would much prefer that we, in general, first, agree on the seriousness of the mission need and it is serious, fleet defense; and then give the military the funding needed to efficiently carry one competitive exploration to find the best system.

We are not doing that here, again, because we are putting strings on the orderly development of the program.

Having recognized that, though I believe that, on balance, the amendment does reflect a compromise and should be agreed to.

I ask the Senator from Nevada, a fellow member of the Armed Services Committee, to comment on the amendment.

Mr. CANNON. Mr. President, I thank the distinguished Senator from Florida for his statement on his amendment, which the committee is prepared to accept. We do feel very strongly on the committee that there is a need to prevent duplication and proliferation of similar missile systems, which is why we deleted the funds to start prototype missiles in the AMRAAM program and insisted that the Defense Department take a look to see if one missile can satisfy the SIRCS and AMRAAM and possibly the AIM missile requirements.

I am glad that the Senator from Florida concurs with us that if one missile can do all of these functions then only one missile should be developed.

As said in the floor statement, if additional funding is needed in the AMRAAM program to resolve this basic question then I would be happy to consider reprograming more funds into this project. I point out to the Senator from Florida that if a single missile proves feasible then there is the possibility that that missile development would be broken out from the rest of the SIRCS program and developed independently by the Government. With these understandings, the committee is happy to accept the Senator's amendment which adds $3 million specifically for the missile commonality studies and another $10 million allocated to the remainder of the SIRCS program.

Mr. GOLDWATER. Mr. President, will the Senator yield for a question?

Mr. CHILES. I yield.

Mr. GOLDWATER. Mr. President, this is the first the subcommittee heard about this amendment, and because we only provided $3.9 million and the House zeroed it, I wish to know a little more specifically what the $13 million is going to be used for. I am not in opposition. I just want to know something about it.

Mr. CHILES. The Navy has said that to continue this program, on the path at which they could see the development following on, they would need a figure of approximately $22 million or $23 million.

The House zeroed the program. The House has a feeling, really, through some of the committee staff on the House side, that they want to see this kind of work done more in-house. SIRCS is one of the first programs to be following the concept of A–109 that, is that there is a determination of what the mission of a new weapons system is going to be before deciding what the hardware is going to look like.

There is some feeling on the House side coming from the committee staff members who came out of a Navy lab that they want to do it the old way, that they always want to sort of have it designed first and then it goes out to let industry see how they would bid on it.

I feel, and the procurement commission strongly felt, that the only way we can really utilize the expertise and the ingenuity of our American corporate structure is to tell them, "Here is our problem. Here is the mission we want to accomplish. How would you solve this?"

That is what they are doing in SIRCS. SIRCS is an intermediate shipboard defense system, primarily a defense against the cruise missile. It is something we have to be tremendously concerned about. The Navy does not have their minds made up on how the system is going to work, but they have selected three good companies and they are asking those companies, "How do you see a solution to this?"

They are getting their ideas before they lock in what the requirements are.

Under the Senate figure of $13.9 million it would allow them to proceed further with their studies as to what the radar should be, how they should work this up, so that it would be ready for the mid-eighties, which is the time we have scheduled to have this operational.

That would be the effect of the program.

There was a feeling in the Armed Services Committee that there were some three missiles coming along in development, and there is a need to determine if there could be commonality. The Senator from Florida certainly does not disagree with that. As the Senator from Arizona knows, I had a little commonality problem with the F–16/18–A program. I think where we can, we should get commonality.

Where we have the first example of using the first circular, A–109, I would like to have a different way of procuring a weapons system, a way which will keep us from having cost overruns, or which will allow us to not have as much chance of cost overruns; which will allow us to have the expertise of the corporate structure unfettered, before we tell them what it has to look like, weigh, and do. To use that expertise, we have to follow this circular. This is the first example.

The Navy is interested in the program now. They say it is proceeding on a good schedule. I have talked to the particular contracting officer in charge of this. He is excited about it. He said we are really getting some innovative, new ways that will make us a generation ahead of where we would be if we decided in advance what we wanted. For that reason we are trying to seek the additional funds.

Mr. GOLDWATER. Mr. President, I am not in opposition to the concept the Senator has spoken of. For years, in fact, I have been advocating the same thing.

I serve on the Tactical Airpower Subcommittee and that is the first I have heard about this. We did have hearings, but the Navy did not ask for $22 million nor did they ask for an additional $13 million when they appeared before us. I am a little at a loss to know why the Navy all of a sudden has changed its mind.

I have great confidence in my chairman. If he says he will take the amendment, I will go along with him. It was just sort of a revelation to me.

The PRESIDING OFFICER (Mr. CLARK). The Senator from Missouri is recognized.

Mr. STENNIS. Will the Senator yield for an inquiry about the bill?

Mr. EAGLETON. I yield.

Mr. STENNIS. Does the Senator understand this will dispose of the Chiles amendment?

Mr. CHILES. We have not had a vote.

The PRESIDING OFFICER. The amendment is pending. There has been no vote.

Mr. CHILES. Mr. President, I move adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. STENNIS. I move to reconsider the vote by which the amendment was agreed to.

Mr. EAGLETON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STENNIS. I thank the Senator for yielding.

UP AMENDMENT NO. 216

Mr. EAGLETON. Mr. President, I have an amendment which I send to the desk. I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Missouri (Mr. EAGLETON), for himself and Senator BELLMON, proposes an unprinted amendment No. 216.

The amendment is as follows:

At the appropriate place in the bill insert new sections as follows:

SEC. . Notwithstanding any other provision of law, in any case in which the retired pay of any member or former member of the armed forces of the United States in any year is equal to or less than $5,000, the amount of such retired pay shall be increased by an amount which, when added to the amount of income of such member or former member for such year from all other sources will result in income for such year of $5,000. As used in this section (1) the term "retired pay" includes retainer pay, and means retired or retainer pay based on twenty or more years of active military service or on a service incurred or aggravated disability, and (2) the term "income" means adjusted gross income as defined in section 62 of the Internal Revenue Code of 1954 plus any amounts received as monthly insurance payments under title II of the Social Security Act.

SEC. . (a) Except as provided in subsection (c), none of the funds authorized to be appropriated by this or any other Act may be used on and after October 1, 1979, to meet in whole or in part—

(1) the cost of purchasing or maintaining equipment or supplies for the operation of any commissary store under the Department of Defense,

(2) the cost of any utilities furnished by the United States in connection with the operation of any such store,

(3) any loss incurred by any such store as the result of shrinkage, spoilage, or pilferage of merchandise under the control of any such store, or

(4) any other direct cost incurred in the operation of any such store other than transportation costs outside the United States.

(b)(1) Except as provided in subsection (c) and paragraph (2) of this subsection, none of the funds authorized to be appropriated by this or any other Act may be used by any military department to meet in whole or in part any cost or loss referred to in subsection (a) in any amount in excess of 66⅔ per centum of any such cost or loss incurred by the commissary stores of such military department in the fiscal year beginning October 1, 1977, or in any amount in excess of 33⅓ per centum of any such cost or loss incurred in the fiscal year beginning October 1, 1978.

(2) Any utilities furnished by the United States to commissary stores outside the continental United States shall be furnished to such stores during the fiscal year beginning October 1, 1977, at not less than 33⅓ per centum of the cost of such utilities to the United States, and during the fiscal year beginning October 1, 1978, at not less than 66⅔ per centum of the cost of such utilities to the United States.

(c) Notwithstanding any other provision of law, the Secretary of any military department is authorized, in accordance with such regulations as the Secretary of Defense may prescribe, to utilize appropriated funds to aid in financing the operations of commissary stores in any fiscal year, but any amounts utilized for such purpose shall be repaid the United States by such commissary stores and the sales price of merchandise sold in such stores shall be adjusted to the extent necessary to permit repayment of such amount to the United States. The amount required to be repaid for any such assistance during the fiscal year beginning October 1, 1977, or the fiscal year beginning October 1, 1978, shall be the amount in excess of the amount referred to in subsection (b). Any amount repaid the United States under this subsection shall be credited to the appropriate account of the military department concerned.

Mr. EAGLETON. Mr. President, this amendment is offered by myself and Senator BELLMON. Though I will not press this amendment to a vote, I do ask unanimous consent that the amendment be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. EAGLETON. I shall be brief. I hope we may have a comment or two from the distinguished chairman of the Armed Services Committee (Mr. STENNIS).

Mr. President, it is a rare situation when the Senate has an opportunity to help some of our poorest citizens, eliminate an inequitable subsidy, and save money all at the same time. That, however, is precisely what this amendment will accomplish.

There are two parts to this amendment—one concerns military retiree income levels, and the other involves phasing out the commissary subsidies for civilian clerk-hire.

Under the amendment, the lowest paid annuitants on the military retired payrolls—the 77,990 who make under $5,000 a year in taxable income from all sources plus social security—would receive a recomputation of their annuities. Their annuity would be adjusted so that they receive a minimum of $5,000 per year. This novel form of "negative income tax" would provide a far more respectable income level for those who served their Nation's armed forces, but retired many years ago when pay scales were very low. The total cost of this half of my amendment is $148 million in fiscal 1978, and it declines in cost each year thereafter.

At the same time, this amendment would tend to reduce or eliminate the pressure which I see building up again for massive recomputation of retired pay. The old form of recomputation, which passed the Senate in 1972, 1973, and 1974—the Hartke amendment—would cost $1.4 billion the first year, and $96.4 billion in lifetime costs. And to top it all, the Hartke-type proposal, which is embodied in S. 390, a bill introduced by Senator MATSUNAGA, would provide an economically indiscriminate form of recomputation—in many cases those now on the lowest annuities would receive the smallest dollar increase, while individuals on relatively high annuities would get far larger increases.

At the same time we are helping the lowest income annuitants, we can do it at no cost to the Government within 2 years and with significant future savings if we couple this income proposal with a phaseout of the clerk-hire subsidies at our military commissaries. I am proposing that we phase out this subsidy, which amounts to $287 million in fiscal 1978, over a 3-year period. This would result in a savings of $96 million in 1978, $203 million in 1979, and $322 million in fiscal 1980, with annual savings increasing each year till they reached over $500 million per year.

The arguments in favor of eliminating the clerk-hire subsidy are well known.

Last year, for example, the Senate included a 3-year subsidy phaseout on two bills—the military procurement bill and the defense appropriations bill. Both amendments were lost in conference.

However, the fact still remains that there are 133 commissaries located within 10-minutes driving time of the nearest commercial supermarket. It is still true that there are several metropolitan areas literally glutted with commissaries. There are four of them in Norfolk, three in Honolulu, five in San Antonio, four in San Diego, five in San Francisco, and six in Washington, D.C. This is a far cry from the original justification for commissaries, the original justification being to provide life's necessities to soldiers at remote frontier posts. That is why commissaries were originally created, a justifiable creation at that time but, obviously, the number of commissaries we have is quite excessive in terms of today's situation.

Today, the commissary clerk-hire subsidy amounts to an economically indiscriminate subsidy. It helps the four-star general officer, who is making over $57,000 per year, just as much as and perhaps more than it helps the lowest-ranking enlisted person making $6,732 per year, or, for that matter, the retired annuitant, trying to live on an annual pension of $3,500.

If I may point out at this point, Mr. President, it strikes me, at the very least, as amusing that we have an elaborate commissary subsidy in the name of national security and national defense. I find no national security reason why a general or a colonel or an admiral or a Navy captain can buy a discount shotgun at a commissary and have the subsidy

attributable to national defense. I do not see why that same officer, in the name of national defense, has to be provided the opportunity to buy a discount Arnold Palmer sand wedge. Be that as it may.

Mr. CANNON. Mr. President, will the Senator yield?

Mr. EAGLETON. Yes.

Mr. CANNON. The Senator is giving a false impression here. Neither shotguns nor Arnold Palmer sand wedges nor any other kind of golfing equipment are sold at the commissary. If people are going to try to buy those, they are going to buy them at the PX's or the base exchanges, which are completely separate. The Senator should not confuse them with the commissary, from which they are completely shut out. One can buy groceries, but one cannot buy golf equipment nor shooting equipment in the commissary.

Mr. EAGLETON. The Senator from Nevada is correct in what he says up to a point. It is all part of the same type of system. Albeit the physical premises of the PX are separate and distinct from the premises of the commissary, but both receive generous Federal subsidies.

I used to work in a commissary when I was a seaman apprentice in the U.S. Navy. I went into the U.S. Navy as a seaman apprentice. My career flourished. I knew it was my golden opportunity and I came out of the U.S. Navy as a seaman apprentice. It was my responsibility, as part of that duty, to lug canned goods, wine, lettuce, and sundry other goods from the commissary of the Great Lakes Naval Training Station north of Chicago, Ill. Believe me, Mr. President, on payday, Friday, I was a pretty tired soul. I was deserving of combat pay, I lugged out so much equipment, so much merchandise, all of it selling consistently below the then market price.

It is well known that the phaseout of the subsidy does not mean the phaseout of commissaries. They will still exist. The only thing that will change is that the discounts below local grocery stores will be cut from the current level of about a 25-percent discount to a 5-percent discount.

In conclusion, Mr. President, I urge my colleagues to consider this amendment, since it has a sort of Robin Hood nature to it. It takes away funding from commissary subsidies, which tend to disproportionately benefit the more well-to-do, and shifts it to the little guys, who are on the lowest annuities.

To top it off, the net cost in fiscal 1978 is only $52 million, with net savings of $55 million in fiscal 1979, and increasing savings each year thereafter. Over a 5-year period, beginning in fiscal 1979, this amendment actually will save $850 million.

Mr. President, the details of this amendment are contained in a paper which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

ASSISTING OLDER MILITARY RETIRED PERSONNEL LIVING ON LOW ANNUITIES

Background.—For two years in a row, 1975–1976, the President has proposed that the annual subsidy for military commissaries be phased out. This subsidy is estimated to be $287 million in FY 1978 and $3.8 billion over the next ten years (assumes 6% annual pay raise). One of the strongest arguments raised against the phaseout of the subsidy has been that there are a number of older retired military annuitants who need the commissary savings (which now range from 22%–29% of prices), because they have very low annuities. Elimination of the subsidy would ultimately save $300 million per year or more, but would bring price savings in commissaries down to only 10%–19% below supermarket prices.

The problem of older retired military living on low annuities was raised in 1975 during the Subcommittee markup of the 1976 Defense appropriations bill, again in 1976 at the full Appropriations Committee markup of the FY 1977 Defense bill, and during floor debate on both the FY 1976 and 1977 Defense bills.

RECOMPUTATION AND ADMINISTRATION PROPOSALS

Recomputation.—Recomputation is a system of adjusting retired pay upward whenever active duty pay is increased. According to the House Armed Services Committee*, "Recomputation became an accepted part of the retirement system by the early part of the 20th century, largely through haphazard course of events, and there is no consistent pattern in the early legislative actions of Congress."

Before June 1, 1958, whenever military basic pay was increased, persons receiving retired pay recomputed their retired pay based on the increased basic pay. Recomputation was discontinued in 1958 and, instead, those then on the retired rolls were given a 6% pay increase. The Congress took another important step in the 1963 pay act. After carefully reexamining the concept of recomputation, the Congress provided that those retired before June 1, 1958, could have a "one-shot" opportunity to recompute their retired pay under the 1958 scales or could receive a 5% cost-of-living increase, whichever was greater. This action was taken following assurances in hearings by representatives of the Retired Officers Association, who has sought to have recomputation restored, that this one-time recomputation, to make up for the lack of prior notice to pre-1958 retirees, would "absolutely" settle the problem once and for all.

In 1963, the cost-of-living approach was made a premanent feature in place of recomputation by establishing the system of automatically adjusting retired pay based on the Consumer Price Index (CPI).

RECOMPUTATION PROPOSALS

During the years 1963–1968, there was little pressure for renewing recomputation. However, the action of both Presidential candidates in 1968 in endorsing recomputation, coupled with the relatively large and frequent increases in basic pay which began in 1967, generated considerable interest in the subject. In 1971, an Interagency Committee reviewed the military retirement system and concluded that, apart from the "ethical obligation" issue, which was not considered overriding, there was no justification for recomputation, since protection of the purchasing power of retired pay was the proper objective of post-retirement adjustment of retired pay, and the existing CPI system achieved that objective. However, the Committee also concluded that, in view of the discontinuance of recomputation in 1958 and the relatively large increases in military pay in 1963–1971, which brought military pay to a level that is generally competitive with that in the private sector, a one-time recomputation based on the January 1, 1971, pay rates could be justified.

Based on these recommendations, the Administration submitted a legislative proposal to Congress on April 15, 1972, and again on February 1, 1973, which called for a one-time recomputation of the retired pay of pre-1971 retirees based on the January 1, 1971, basic pay rate. Some disability retirees (depending on degree of disability) were to receive immediate increases while non-disability retirees with less than 25 years of service but 60 years of age or older and more than 25 years and age 55 or older would also experience pay increases. These legislative proposals were never adopted by the Congress.

In fact, the House Armed Services Committee appointed a special subcommittee on retired pay revisions to consider the recomputation proposal, and this committee concluded that recomputation in any form was not warranted, and recomputation legislation should not be considered further by the Armed Services Committee. The Committee came to the conclusions for the following reasons:

1. Court tests proved there was no legal obligation to recompute.

2. The subcommittee could find no evidence of large numbers of retirees in conditions of economic deprivation, and recomputation would not be the best way to deal with such a problem.

3. There was no relationship between recomputation and active duty retention, and recomputation might actually harm retention.

4. The government has a moral obligation to retirees, but "the level of retirement income and benefits received by the retiree is consistent with what he was led to expect when he made his career decision." Some older retirees received lower annuities than more recent retirees, but this happens in all walks of life and is no reason for a special obligation on the part of the government.

5. Recomputation limited to pre-1958 retirees would create new "inversions" with certain later retirees getting less than older retirees.

6. The present retirement system is superior to any system in the private sector, and the CPI formula protects retirees' purchasing power.

7. The present retirement system amply meets the government's obligation to the retirement community and keeps retired pay ahead of the cost of living.

8. Compromise recomputation proposals will never solve the problem. It was "solved" in 1963, but keeps recurring.

The Interagency Committee raised many of the same arguments against recomputation, as well as the following ones:

1. It is costly and inefficient and encourages early retirement.

2. Retired personnel no longer contribute to national security to the same extent as their active duty counterparts, and while their annuities would keep pace with the cost of living, it is illogical to give them the same increase that active personnel receive.

3. The reasons for active duty pay scales relate to procurement and retention needs of the active forces and are totally unrelated to retirees' needs.

4. No major private or public retirement system uses recomputation.

HARTKE RECOMPUTATION PROPOSALS

In addition to the Administration's proposal for one-time recomputation, on three occasions the Senate has passed an amendment by former Senator Hartke to the Military Procurement Authorization Act providing for a one-time recomputation identical with the Administration's 1972 and 1973 proposal, except it uses 1972 pay rates (rather than 1971 rates) and non-disability retirees would all recompute at age 60. The amendment was adopted by the Senate as follows:

July 1972, 82 yeas, 4 nays, 3 "present."

September 1973, 71 yeas, 14 nays, 8 "present."

*House Armed Services Committee No. 92–80, "Recomputation and Other Retirement Legislation". Report by the Special Subcommittee on Retired Pay Revisions of the Committee on Armed Services, House of Representatives, December 29, 1972.

June 1974, 58 yeas, 19 nays, 8 "present."

All three times, the amendment has been dropped in conference because of the strong opposition of the House conferees and the fact that such an amendment is not germane to the Authorization Act under the rules of the House of Representatives. Senator Matsunaga has again submitted a recomputation bill (S. 309) for consideration in the 95th Congress. Several bills have been introduced in the House, the latest of which was introduced on March 2, 1977 by Representative Patterson. His companion bill is H.R. 4305. No hearings have been held on either bill.

PRINCIPAL BENEFICIARIES

The principal beneficiaries of any one-time recomputation are those who retired before June 2, 1958. The average officer retired before June 1, 1958, is currently receiving approximately $7,400 per year, while the average enlisted man is receiving approximately $4,000. The average officer retired in 1971 is receiving approximately $12,100 per year; the average enlisted man is receiving approximately $6,100 per year. Other comparisons are shown in the following table:

CURRENT ANNUAL RETIRED PAY OF SELECTED GRADES AT VARYING TIMES OF RETIREMENT

Rank/years of service	Pre-June 1958	Oct. 1967–June 1968	Jan. 1972	Jan. 1976
O–8/30	$24,480	$27,658	$32,540	$33,562
O–6/30	17,862	21,129	24,853	25,634
O–4/20	7,616	9,608	11,306	10,468
E–7/22	4,733	5,984	7,040	6,606
E–5/20	3,505	3,807	4,479	4,149

The following tables show the various average retired pay increase under different forms of recomputation. The largest dollar increases go to those who retired prior to June 1958.

AVERAGE ANNUAL RETIRED PAY INCREASE IN FISCAL 1977 UNDER HARTKE[1] RECOMPUTATION PROPOSAL

	All retirees	Disability retirees	Nondisability retirees
Members retiring prior to—			
January 1972	$2,141	$1,834	$2,341
Officer	2,796	2,816	2,786
Enlisted	1,381	1,030	1,690
Members retiring prior to—			
June 1958	2,834	2,663	2,979
Officer	3,436	3,122	3,796
Enlisted	1,923	1,605	2,095
Members retiring from—			
June 1958 to December 1971	1,780	1,281	2,060
Officer	2,397	2,317	2,418
Enlisted	1,155	868	1,463

[1] Same proposal as in S. 309, proposed by Senator Matsunaga.

Note: Based upon 10 percent sample of retired members as of June 30, 1976. The average applies only to those members who would be affected by the increase in fiscal year 1977. Costs reflect the March 1976 increase in retired pay, with no subsequent CPI adjustment.

AVERAGE ANNUAL RETIRED PAY INCREASE IN FISCAL 1977 UNDER HARTKE RECOMPUTATION TO OCTOBER 1976 PAY SCALE

	All retirees	Disability retirees	Nondisability retirees
Members retiring prior to—			
January 1972	$1,345	$1,160	$1,465
Officer	1,734	1,808	1,697
Enlisted	894	630	1,126
Members retiring prior to—			
June 1958	2,011	1,932	2,078
Officer	2,418	2,246	2,615
Enlisted	1,396	1,207	1,497
Members retiring from—			
June 1958 to December 1971	997	645	1,195
Officer	1,307	1,093	1,362
Enlisted	684	467	917

Note: Based upon 10 percent sample of retired members as of June 30, 1976. The average applies only to those members who would be affected by the increase in fiscal year 1977. Costs reflect the March 1976 increase in retired pay, with no subsequent CPI adjustment.

Source: Department of Defense.

One of the problems of recomputation is that it is economically indiscriminate. In many cases, personnel (especially high-ranking officers) with relatively high annuities will receive higher dollar increases than enlisted personnel who are on very low annuities.

OTHER FACTORS CONCERNING RECOMPUTATION

The costs and average increases under various recomputation proposals are considerable. In FY 1978, costs range from $1,422,000,000 ($1.4 billion) for the Hartke proposal at 1972 pay scales with 6% inflation to $7.6 billion in FY 1978–1982 under the same assumptions. Total lifetime costs of this Hartke proposal are estimated at $96.4 billion by the Department of Defense (assuming future price index increases of 6% a year). Under the Hartke plan, about 75% of all present retirees would have their annuities recomputed, while under permanent recomputation, about 80% would be recomputed.

AN ALTERNATIVE SOLUTION

There is an alternative proposal that would help alleviate the financial problems of older military annuitants on low annual annuities. This proposal is new and overcomes most of the objections raised against recomputation. It is designed specifically to get at the problems of the older personnel who are on such low annuities that even cost-of-living increases tend to result in very small dollar increases and do little to help them maintain an adequate standard of living.

The proposal provides for recomputation of annuity based on total reported income. It should be recognized that this proposal would not eliminate the need for cost-of-living raises based on increases in consumer prices. After the revisions outlined below, cost-of-living increases would continue based on the revised annuity.

MINIMUM ADJUSTED GROSS INCOME WITH SOCIAL SECURITY OFFSET

This option provides adjustment to the annuity so that annuitants receive at least a $5,000 minimum adjusted gross income. Based on the retiree's tax return (the latest one available), his annuity would be adjusted upward so that his total adjusted gross income plus any Social Security benefit at the time of recomputation was at least $5,000. The recalculated annuity would form the basis for future cost-of-living increases as in the other more expensive recomputation proposals. Title III retirees (reserve personnel, who have not served on active duty and therefore, were not career military personnel) would not have their annuities increased.

This proposal is economically discriminate, since only the economically worst-off retirees would receive increases in their annuities. Those who have second jobs or outside sources of income, and who really have no need for an increase in their annuity, would receive none. For example, a study by the Civil Service Commission showed that there are 138,031 retired military—or over 10% of the total retired population—who are employed by the federal government. This group and their compensation break down as follows:

	Number of uniformed services retirees	Average total compensation	Average Civil Service pay	Average retired pay
Commissioned and warrant officers	27,348	$28,970	$19,299	$9,671
Enlisted	110,683	17,441	12,301	5,140
Officers and enlisted	138,031			

It does not make sense to increase retired annuities for persons who are holding government jobs that significantly raise their total incomes. The same is true of individuals who hold jobs in the private sector or whose retired annuity is supplemented by other sources of income (family estate, stocks, etc.) This option avoids providing any increase for such individuals and amounts to a form of "negative income tax" for retirees.

One-year costs of supplemental payments to insure various minimum income levels

The one-year total cost of supplementing 1975 tax year Adjusted Gross Income (AGI) of retired military personnel to the indicated levels is estimated to be $148 million. Costs are based on members on the retired rolls on 30 June 1975. The total cost estimated by DoD was $175 million, for the 77,990 personnel whose incomes would be affected. However, 11,291 of these personnel are also receiving Social Security benefits with an estimated average annuity of $2,400. Thus, the first-year cost is only estimated to be $148 million, considering the offset feature.

It should be noted that these costs would be less for FY 1978 because of retired pay increases and possible other increases to income that have occurred since the 1975 figures used in the data base. It is also possible that some members have since lost a source of income.

The above data does not include approximately 40,000 retired members being paid by the Veterans' Administration, nor 116,000 members whose Adjusted Gross Income is unknown.

Finally, cost of this proposal in each year after FY 1978 would decrease from the $148 million as older annuitants die.

The table on the following page shows the cost of this amendment, along with the corresponding savings that would result from a phase-out of the commissary subsidy for clerk-hire.

EAGLETON AMENDMENT COST DATA

[In millions of dollars]

	Fiscal year—				
	1978	1979	1980	1981	1982
Cost of increasing adjusted gross income (AGI)[1]	148	148	148	148	148
Savings from phasing out commissary subsidy	(96)	(203)	(322)	(341)	(362)
Net cost (savings) under amendment	52	(55)	(174)	(193)	(214)

[1] Costs will actually decline in the outyears as some of the annuitants die. A conservative approach is used for costing purposes.

ADDITIONAL DATA

The following tables are provided as appendices and show additional information pertinent to this proposal.

Appendix 1 shows Adjusted Gross Income of Retired Military Personnel.

Appendix 2 shows average Adjusted Gross Income by Grade for Retired Military Personnel.

Appendix 3 shows Current annual retired pay of selected grades at varying times of retirement. It should be noted that under the Matsunaga bill (S. 309), a proposal similar to the Hartke amendment, the dollar increases would be significantly greater for high ranking officers when compared to lower ranking enlisted personnel. This is summarized below: (assumes pre-June 1, 1958 retirement).

Rank/years of service	Retired pay (present)	Retired pay (recomputed)	Increase
O-8/30	$24,480	$32,532	$8,052
O-6/30	17,856	24,852	6,996
O-4/20	7,608	11,304	2,856
E-7/22	4,728	7,032	2,304
E-5/20	3,504	4,476	972

While two star generals (O-8) who are presently making $24,480 would receive an $8,052 increase, Sergeants First Class (E-7) would get an increase of only $2,304 even though they are presently living on only $4,728. The comparison with an E-5 (Sergeant) is even worse.

APPENDIX 1

ADJUSTED GROSS INCOME[1] OF RETIRED MILITARY PERSONNEL[2]—TAX YEAR 1975

Adjusted gross income range	Number of members in this income range	Number of members in this income range or below
Under $1,000	6,261	6,261
$1,000 to $1,999	7,932	14,193
$2,000 to $2,999	11,891	26,084
$3,000 to $3,999	21,315	47,399
$4,000 to $4,999	30,591	77,990
$5,000 to $5,999	29,660	107,650
$6,000 to $6,999	28,668	136,318
$7,000 to $7,999	29,022	165,340
$8,000 to $8,999	30,707	196,047
$9,000 to $9,999	33,276	229,323
$10,000 to $10,999	35,574	264,897
$11,000 to $11,999	37,980	302,877
$12,000 to $12,999	40,769	343,646
$13,000 to $13,999	42,741	386,387
$14,000 to $14,999	44,042	430,429
$15,000 to $15,999	44,761	475,190
$16,000 to $16,999	44,701	519,891
$17,000 to $17,999	44,638	564,529
$18,000 to $18,999	42,894	607,423
$19,000 to $19,999	39,320	646,743
$20,000 to $20,999	35,274	682,017
$21,000 to $21,999	31,932	713,949
$22,000 to $22,999	28,289	742,238
$23,000 to $23,999	24,122	766,360
$24,000 to $24,999	21,996	788,356
$25,000 to $29,999	74,996	864,352
$30,000 to $34,999	37,038	901,390
$35,000 or more	32,944	934,334

[1] In addition to retired pay, this includes the second career income of the member plus any income from interest, dividends, other pensions, rents, and royalties. It is reduced for moving expenses, tax exempt disability retired pay, any disability income exclusion, and certain employment expenses. A spouse's adjusted gross income is included if a joint return was filed.
[2] Data does not include title III retired members or 116,000 members with an unknown adjusted gross income.

APPENDIX 3

CURRENT ANNUAL RETIRED PAY OF SELECTED GRADES AT VARYING TIMES OF RETIREMENT (DOLLARS)

Rank/years of service	Pre-June 1, 1958	Oct. 1967-June 1968	Jan. 1971	Jan. 1972	Jan. 1976
O-8/30	24,480	27,658	31,680	32,540	33,562
O-6/30	17,852	21,129	24,192	24,853	25,634
O-4/20	7,616	9,608	11,004	11,306	10,468
E-7/22	4,733	5,984	6,852	7,040	6,606
E-5/20	3,505	3,807	4,356	4,479	4,149

Source: Department of Defense fact sheet, 15 April 1976.

Mr. EAGLETON. Finally, I make this one final comment; then I want to hear from the distinguished chairman of the committee.

Getting back to the original part of the amendment—this being a two-part amendment—I referred to pensions and to the rather meager stipends of the lower annuitants currently receiving benefits. This involves those annuitants who served in the military service many years ago, when the pay was much lower, and thus their annuity, geared to that pay, is very small, indeed, in light of today's inflationary economy.

This whole question, Mr. President, of annuities and pensions for the military and for civilian government employees, is a very, very difficult one. It applies not only to the Federal Government. The same observations can be made with respect to State government, county government, municipal government—namely, that government costs at all levels are being increasingly consumed by pensions.

Not too many years ago, the total pension cost to the Department of Defense was in the neighborhood of $1 billion. Today, it is over $9 billion. It is roughly 8 percent of the current defense budget. Actuarial projections are that, by the end of this century, about 25 years from now, it will be over $30 billion, and thus an even greater percentage of the budget.

I know that the distinguished chairman of the Committee on Armed Services has been considering for some time this facet of the defense budget. I know that the people in the Pentagon are very, very concerned about it.

I know further that the President of the United States has appointed a commission to study this very ticklish and very important problem. I say it is a problem not indigenous solely to the military. The same general critique can be made of the civil service retirement system. Indeed, if one wants to look at the actuarial solvency of social security, as the President of the United States has recently referred it to Congress, it has serious problems in and of itself.

I ask the distinguished chairman, does he think it is likely, in either this calendar year or next, depending upon when the President's commission makes its report, that his committee will be considering this terribly difficult but terribly important question of pensions in the overall. Specifically, will the Armed Services Committee consider the meager nature of pensions for those at the very lowest level, whose pensions are geared to a low pay scale that existed in the military 20, 30, or more years ago?

Mr. STENNIS. Mr. President, I am glad to respond the best way I can to the Senator from Missouri and direct those answers to the two major points, as he so skillfully pointed out, in his amendment.

Mr. President, first as to the proposed change with reference to the pay for the clerks or the clerk-hire in the commissaries, the Senator from Mississippi, all the way through last year—and I suppose we had it up 15 or 20 times—voted for the change with reference to the pay of those clerks. I think the clerks' pay is part of the cost of the goods. It goes into the end product that is being bought, the sack of groceries, and it should be paid for there. But the further that matter went through the authorization committees and the appropriations committees, the fewer votes it got. The last time, as the Senator from Missouri may recall, it came up before the Committee on Appropriations, that was the death blow that killed the last remnant of reform. I think there were just three or four votes for it.

I favor that part, but, with deference, I do not believe that this is the way to go at it. I think the Senate would be turning in a different direction altogether, and I think there would have to be broader adjustments and more across the board.

Now, to apply the money we save there toward increasing the lower level of retired military annuitants, or retired military servicemen or women, that gets over into recomputation. Certainly, there are points in favor, particularly as to some groups of recomputations.

I have opposed, though, a recomputation here. In many years it has come up. the Senator may recall, as an amendment to this bill. I think it is a much deeper and broader and more difficult problem, a system that cannot be cured, or even to start a cure, by an amendment here on the floor.

President Carter has appointed a Com-

mission, as the Senator pointed out, and I immediately wrote him a letter endorsing his move there.

This is one of the many serious matters in this field of retired pay and the cost of the personnel.

I said here before that we must do something about it. The Senator gave the figures. In 1957 or 1958 there was that bill which first had $1 billion. One billion dollars; and now this year it is, I believe, close to $9 billion. Nine billion dollars now in the bill.

I supposed 2 or 3 years ago that if we did not do anything more we could have started out another system, a new system, not just repudiating the old one, but start a new one and have it on a more actuarially realistic basis, let contributions be paid and the Federal Treasury pay part, and keep the old one going on some basis. Keep the old system going on some basis and it would finally play out. There would be no one left under the old system.

I realize it took more than we could do, more in-depth hearing and determination, and just a different approach and opinions from the economic standpoint. So we will have to solve that problem in some way. But I think a commission will have to consider it and at least start off with the recommendation.

I am sorry I could not support it even though I think it would have merit of some degree in the Senator's amendment. I am glad he brought it up. But I do not think it belongs on this bill. I say to the Senator from Missouri, good will came from the debate, but we could not handle an amendment like this in conference.

That is the best I can say.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. Yes, I am glad to yield.

Mr. GOLDWATER. The Senator from Missouri touched on a problem which is, along with civil service retirement, probably the biggest problem this Government faces, but it is one thing we overlook when we assume it can be rather easily accomplished by this body.

When men were enticed, or volunteered to go in the service, or were drafted, one of the promises—and I emphasize this, one of the promises—was a retirement fund.

This is why men used to go on duty for $50 a month, or $125 a month as an officer. There was always that silver rung at the top of the ladder that was a promise from the Federal Government of retirement pay.

We had expected this year that a report would be coming to us from the Pentagon—I do not know, I have not heard of it—where they would outline a new retirement plan, patterned somewhat on the civil service plan such as we have, where we pay a portion of our income into a retirement fund that is later matched by the Federal Government.

I must say that this fund in itself, I think, is around $100 billion in the red.

Now, this money we have promised, I do not see any way in the world we can get out of paying it. To give an idea of the total involved in recomp, as Senator STENNIS has talked of it, and as I see it and other members of the committee, we are talking about $350 billion to $400 billion if we did not take another man in uniform starting right now.

There are new systems of retirement, and I would hope that next year we can force the Defense Department to come over with a plan that I know the services will welcome. Salaries are such now in the services that they can provide retirement for themselves. In fact, they have voluntary plans for health, voluntary plans for additional retirement already going.

But I thank the Senator from Missouri for bringing this up and reminding the chairman we have a responsibility owed us from the Department of Defense to come over with a plan.

I close by saying again that this is a promise we made to the men in uniform, and there is no way we can go back on that word.

Mr. GLENN. Mr. President, will the Senator yield for an additional comment?

Mr. EAGLETON. I yield.

Mr. GLENN. Mr. President, I was not on the floor during the first part of this debate, but I would like to add to what Senator GOLDWATER just said.

I spent some 23 years in the Marine Corps and I did not really look at that as retirement pay I was building toward. In fact, I think this is a misnomer to those who were in during the peacetime, before pay scales were upgraded to the level at the present time.

I agree, we need a new retirement system; it cannot go on like it is. But I can say how I looked at it and how my compatriots at that time looked at it, and that was, we looked at it as deferred compensation, as earned money that was going to come to us later on, and we put up with pay scales at that time that quite often were half or less than half of those of our compatriots, as I say.

I can say that I was once offered more than double what I was making to go out and do the same kind of work outside. I declined. I liked what I was doing in test work.

I might have some figures and might have to correct myself, but I believe at the time I was in orbital work, in 1962, I think my total compensation at that time, including flight pay, was something like $16,000 a year. That was at a time when others on the outside in private industry were making $35,000 to $38,000, something like that.

That was what I was offered one time, anyway.

So whether we say we are in for so many years and then get retirement pay, I think, as Senator GOLDWATER says, this was a contract the Government had with us, and we put up with admittedly lower pay scales.

I know the people I served with then would look at this as a breach of faith if we cancelled out now and said, "You do not rate this."

Not retirement pay; but we looked at it as giving up things for our wives and children, better homes than we might otherwise have had, because of this thing in the future, deferred income.

That is why it wears a little thin with me when people these days say that we are double-dipping for doing this kind of thing. That is supposedly very bad.

I look at it as though we gave a lot in those days compared to what we could have had.

Just about the time I left the Marine Corps was the time when pay scales started going up. I would say they are quite satisfactory now. I think they are very good, very comparable with industry, very comparable with being on the outside in whatever position we could command.

So I think a contributory system of some kind is good to go to, perhaps. I hope we do get a study of that as soon as they can from the Pentagon. I would like to see it.

But I think when we start breaking faith with people who have served and did look at this as deferred income, it borders on being unfair. As Senator GOLDWATER says, they had a contract. I do not like to see that contract broken.

Mr. STENNIS. Mr. President, will the Senator yield so that I may make a statement?

Mr. EAGLETON. I yield.

Mr. STENNIS. Before we leave the subject that has been brought up, I point out that I have had to live with this matter in great detail. There is another problem that goes with it—a solution. We are going to have to do something about this matter of 20 years in and then the person is out, drawing those compensations for life. That raises many new questions. As certainly as we are standing here, that is a great part of our military security problem.

I mention it to challenge the thought of the best minds we have here and in the Nation that are trying to find a way.

Mr. EAGLETON. Mr. President, I thank my colleagues—the three who have spoken last—the distinguished chairman (Mr. STENNIS), the distinguished member of the Armed Services Committee (Mr. GOLDWATER), and the distinguished Senator from Ohio (Mr. GLENN).

Although this debate has been brief and although this amendment is not going to be pressed to a vote, I believe that it nevertheless has served a very useful and worthwhile purpose.

I agree completely with what Senator GOLDWATER said and what Senator GLENN added thereto, in that years ago, when the salary scales of career military people were disgracefully low, the pension or the deferred compensation that was offered as part of the inducement to make the military a career was very much part of a "package."

When I was young—to prove to some in the Chamber that I have lived some years—there used to be a song called "$21 a Day, Once a Month." That was at the eve of World War II. That was the pay-scale for a buck private, if I recall correctly. You got $21 a day, once a month.

When payscales were that incredibly low, the pension or the deferred pay, or whatever label it appropriately bears, made a relevant "package" along with the basic pay and allowances.

However, as Senator GLENN has pointed out, it is quite different today. The pay scales in the military today are

comparable to those on the outside in a whole host of pursuits. Thus, the "package" concept, especially with the "20 and out" factor that Senator STENNIS talks about, no longer applies. When someone retires at age 41, 42, or 43, in the prime of his life, receives a very generous pension, and then starts a new civilian career, often with the Federal Government, it definitely raises very serious actuarial and cost problems.

I know that Senator STENNIS has long had this in the back of his mind. So has Senator GOLDWATER and many other Senators on the floor.

Mr. President, I hope that when the Carter commission—whatever that commission is called—submits its report, the Armed Services Committee and other appropriate committees of Congress—perhaps even the Finance Committee—will give very close attention to it, because the clock is ticking and time is running out. This is not something that we can sweep under the rug every year; because when we do sweep it under, next year the pile gets bigger. Now it is approximately a $9 billion pile for the annual cost and the unfunded liability is even greater. If we wait too long, the annual cost is going to be $15 billion, and the unfunded liability will increase as well.

The clock is ticking and the cost is increasing. Sooner or later—I hope sooner—we will have to devote some very hard and tough attention to this not insignificant financial problem.

Mr. President, if no one else wishes to address himself to this amendment, I will withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. MATSUNAGA. Mr. President, I rise simply for the purpose of a colloquy to establish legislative history relative to industrially funded activities covered by the provisions of H.R. 5970.

The need to assure our industrially funded activities that they will be fully capable of adequately and efficiently performing the functions for which they were designed is an effort in which I have been long involved. Evidence of inefficient and costly manpower practices in these installations, which I believe to be attributable to civilian employment restrictions imposed by Congress, has led me in past Congresses to seek the exclusion of industrially funded personnel from Department of Defense civilian manpower ceilings. In the present Congress, seven of our colleagues have joined Senator BAYH and me in sponsoring S. 544, legislation to accomplish such an exclusion.

In addition, I was joined on February 23 of this year by 9 Members of this body and 14 Members of the other body in communicating our concerns over the management of industrially funded activities to Secretary of Defense Harold Brown.

During consideration of the legislation before us today by the Committee on Armed Services, the distinguished Senator from Georgia (Mr. NUNN), chairman of that committee's Subcommittee on Manpower and Personnel, most kindly arranged for a hearing to investigate the problems being experienced by our industrially funded activities, and I take this opportunity to thank him again for his efforts and expressed concern in this area.

Senator BAYH and I testified before the subcommittee at that time, and engaged in a lively colloquy with Chairman NUNN and others on this matter. It was generally conceded, I believe, that in industrially funded activities, practices exist which are clearly not in line with good management practices. Real problems are posed by inflexibility in the policy to hire new employees to meet fluctuating workloads, increased overtime costs due to such inflexibility, and employee hardship related to the practice of firing workers just prior to the end of a fiscal year in order to meet the end strength civilian ceiling imposed by the Congress.

Most importantly, with particular reference to our continued unconscionably high unemployment rate, we discussed at length the consequences of the imposition of the ceiling, one of which is to prevent the hiring of new employees even when the work and funding are available.

However, while Senator BAYH and I agreed with Chairman NUNN, representatives of the Department of Defense, and others that such problems existed, we differed as to their causes. Senator BAYH and I and many others, including the managers of the industrially funded activities themselves, continue to believe that the congressionally imposed ceilings are in a large part responsible. Chairman NUNN indicated his belief that funding restrictions and the allocation of the ceiling among the various activities by the Department of Defense were to blame.

During subsequent consideration of this issue by the Armed Services Committee, Chairman NUNN's views on S. 544 prevailed. However, as a result of Chairman NUNN's efforts and the most welcome and appreciated efforts of the Senator from Washington (Mr. JACKSON), language was included in the committee's report on H.R. 5970 which I understand specifically directs the Department of Defense to allocate the civilian manpower authorized it by Congress in such a way that industrially funded activities are adequately and efficiently able to perform their function within the funds available for such purposes. The committee further specified that proposed reductions in the civilian manpower ceilings were not intended to be applied to the industrially funded activities.

While my belief that the ceilings are responsible for the management problems in the industrially funded activities remains unchanged, I am willing to accede to the judgment of the committee for the present time, and see whether Department of Defense implementation of the clear expression of congressional intent that industrially funded activities be provided the manpower necessary to fulfill their work requirements will in fact solve the problems. However, my concern is that if the intent of Congress is not made absolutely clear, the Department of Defense, will not adequately implement congressional directives.

Mr. President, at this point I yield to the Senator from Indiana.

INDUSTRIALLY FUNDED DOD CIVILIANS AND MANPOWER CEILINGS

Mr. BAYH. Mr. President, today during our consideration of the Defense Department authorization bill for fiscal year 1978, I want to call the attention of my colleagues to an extremely significant section of the civilian manpower provisions of the committee report. I would also like to take this opportunity to thank my distinguished friend and colleague from the State of Washington for his invaluable assistance in addressing a serious and continuing problem which is occurring at industrially funded Department of Defense facilities.

As my colleagues will recall, I am the sponsor of S. 544, legislation that would have removed industrially funded facilities from DOD civilian manpower ceilings. I was joined in this effort by Senator MATSUNAGA from Hawaii and several other Members who know how these ceilings have affected employment in their States. Without launching into a long discussion on the details of the industrial funding concept, I would only make the following points:

IFA's are not directly funded facilities. The shipyards, weapons support centers, research laboratories, and prototype production installations we are talking about operate on a revolving funds basis. This means that these installations which employ 26 percent of the DOD civilian work force perform work on much the same basis as if they were private firms responding to the laws of supply and demand. The funds they do receive for services performed come from customer accounts.

The problems arise when workloads exceed the physical capability in terms of manpower to do the job. The facility doing the ship or weapons repair and overhaul, design work or prototype production—to name just a few of the possible tasks—cannot hire enough people to do the job in the most efficient way. Overhead costs are driven up because ceiling constraints rule out additional personnel. By contracting out jobs that might be performed more suitably in-house or paying workers in some instances "perpetual overtime," we end up spending more money or not getting the most for the dollar we have already spent. The last point here deserves special attention since S. 544 would not require one penny more in defense appropriations.

Now I do not intend to offer S. 544 as an amendment here on the floor because I believe that thanks to productive efforts of Senator JACKSON in committee we have directionary report language saying to the Department of Defense, "Let the industrially funded facilities

hire up to funded workload." Furthermore, this language of the report says let the managers at these facilities who want to manage do so.

There are few more frustrating things than to learn of an arbitary ceiling figure arrived at through reference to the statutory ceiling denying IFA managers the flexibility to hire more people when there is money to do it and work to be done. This is certainly inconsistent with our efforts to reduce unemployment and create conditions for job stability.

The distinguished and capable junior Senator from Georgia who is chairman of the Senate Armed Services Subcommittee on Manpower and Personnel permitted a hearing to be held on March 29 when Senator MATSUNAGA and I were able to question Department of Defense witnesses at length about this matter. I want to take this opportunity to thank Senator NUNN for his willingness to explore possible answers to the problem of insufficient personnel support that continues to plague IFA's. I am encouraged and do not think I misrepresent his position by saying that he agrees with me that there is a problem. I am afraid that we continue to disagree about the source of the difficulty. However, rather than offer my amendment at this time, I will defer to his judgment in accepting language to direct the Department of Defense to manage its manpower in a way that IFA's will be allowed to hire up to funded workload. I cite page 132 of Senate Report 95–129 in this regard in the section entitled "Industrially Funded Civilians":

> Especially in activities engaged in maintenance, construction and repair, the Services must manage their manpower resources in a fashion that will insure that these activities are provided sufficient civilian manpower to fulfill their work requirements, within the funding plans established for their operations. This process should improve stability and reduce turbulence which otherwise can occur if manpower is only a fallout of annual budget fundings.

This language is saying plainly that industrially funded activities engaged in the type of work that is going on at the Crane Naval Weapons Support Center at Crane, Ind., the Naval Avionics Facility in Indianapolis, the Pearl Harbor shipyard, the Trident facilities at Bangor, Wash., and across the country ought to given 100 percent of the personnel necessary to perform their work requirements. This seems to me to provide support for that section of Public Law 93–365 that requires DOD to manage its manpower affairs as efficiently as possible. Importantly, this section of the report on the fiscal year 1978 DOD authorization specifically excludes IFA's from the $19,800 cut in the Defense civilians authorization.

Mr. President, I am sure that the chairman of the Subcommittee on Manpower and Personnel will understand that I reserve the right to reintroduce S. 544 if it is determined that the statutory ceiling is, indeed, the problem. Despite arguments to the contrary, the end strength DOD manpower ceilings continue to contribute significantly to management difficulties at IFA's across the country. As Mr. Kenneth Blaylock, president of the American Federation of Government Employees, observed during his testimony in favor of S. 544:

> Unfortunately, the industrially funded activities of the Federal government though supposedly modeled on . . . tested private sector principles, are frustrated by the artificial barrier which no private enterprise faces—arbitrary ceilings.

To borrow a phrase of Kenny Blaylock, "where the rubber hits the road"—that is, at the defense installations we are talking about—there is considerable frustration over hitting a 1-day manpower ceiling at the end of a fiscal year when the workload on that day and the funding for that workload could accommodate hundreds of additional personnel. I hope that the language in the committee report will be a clear signal to the Department of Defense that we must hire the people where they are needed.

END-STRENGTH FLEXIBILITY

While the committee did provide constructive language with regard to the management of personnel support for IFA's, I want to go on record in expressing some disappointment that a proposal to increase the end-strength flexibility for the Department of Defense was rejected. That amendment would have increased the present authority of the Secretary of Defense to increase the number of DOD civilian personnel authorized by Congress from its present 0.5 percent to 1.5 percent. The House Armed Services Committee has already approved such an amendment and Congressman CORNWELL, of Indiana was successful in increasing the flexibility still further to 3 percent.

Mr. President, I think that approach is very reasonable, and I urge my colleagues who will serve as conferees to favorably consider this provision of the House bill. The Department of Defense in response to a question by Senator MATSUNAGA on the matter of flexibility indicated its strong support for such a measure. I refer to page 66 of the March 29 hearing transcript on S. 544:

> While the one-half percent increase authority was sufficient to avoid inefficiencies in FY 1977, the only time we had to use it, the Department would welcome a larger range of flexibility. It is quite possible that further unprogrammed requirements could exceed 5,100 spaces and not be offset by other program reductions. More flexibility would lessen the chances that the statutory ceiling could cause inefficiencies.

Even with added flexibility, the statutory ceiling would provide Congress the oversight and control they desire.

The Department of Defense clearly indicates that increased flexibility would allow accommodation and more efficient management of civilian workloads. This is a reasonable and good-sense step that ought to be taken to insure the wisest possible expenditure of the DOD manpower dollar.

CONTRACTING OUT OF IN-HOUSE SERVICES

Another issue has been raised in connection with the whole controversy surrounding the appropriateness of ceiling constraints. This involves their role in facilitating contracting out of in-house DOD services when it may be uneconomic to do so. The House has been so concerned about this matter that its version of the DOD authorization bill contains a moratorium on contracting out until March 15, 1978, after a study has been complete.

During the hearing on S. 544, I posed a question to DOD on this matter concerning the number of man-years purchased through contracting out and have been informed that:

> The Department does maintain records on some contract support services associated with commercial and industrial-type functions in CONUS (Continental United States). These data show a relatively stable number of estimated contractor man years from FY 1973 to FY 1976, of about 130,000.

This response also indicated that this purchase of man-years provided stimulus for "an estimated 2 million man-years in the private sector."

I have been able to undertake only a preliminary study of the replies provided by DOD since they arrived in my office shortly before the close of business on Friday. However, I think this issue certainly merits further study by the Senate even in the event that my colleagues appointed to conference find they cannot agree with the concerns and actions of the House on this matter. Certainly, contracting out activities pursuant to OMB Circular A–76 have raised serious questions that need to be answered.

While DOD does not agree with the argument that manpower ceilings do force contracting out when it is uneconomic, such restraints are characterized as "an effective management tool for promoting improved worker productivity and for stimulating reliance on economical contracting."

At the same time, DOD sees manpower ceilings as a duplication of financial controls based on the labor dollar. Furthermore, this "reliance on economical contracting" is based on the criteria of OMB Circular A–76, themselves subject of examination.

Without going into great detail on this matter, I am gratified to know that Senator NUNN plans to take a rigorous look at this entire matter as it impacts on DOD in hearings which I understand will be held in the near future. Again, I wish to commend my friend from Georgia for his willingness to look into this problem and provide the Senate and the country with answers to some of the rather disturbing questions that have been raised.

I am going to continue to follow this matter closely in the days ahead.

Mr. President, taken together, the Senate and House actions on the civilian manpower portions of the DOD authorization provide us with an opportunity to put our DOD operations on a more efficient footing. I think drawing attention to the difficulties recurring at IFA's has contributed greatly to this process. We must remain open to recommendations on how best to provide the most efficient personnel support for operations at these installations.

Mr. President, it seems clear to me that the language contained in the committee report can be properly construed as a directive to the Department of Defense concerning the management difficulties occurring at IFA's. There are, however, two elements of the report language that may perpetuate uncertainty.

The first involves the term "construction" that I believe should extend to acquisition support engineering, a function which is performed at the Naval Avionics Facility in Indianapolis, an NIF activity. This type of industrially funded engineering support is most crucial to the readiness of the fleet.

The other element involves the phrase "funding plans." In order to accomplish most effectively the purpose of this language, these plans should be taken to mean those of the IFA. Certainly, I would not want to discover a situation where work was being shifted away from one activity to another in order to meet an arbitrary ceiling. This would defeat the entire purpose of the language and I am sure it is not what the distinguished subcommittee chairman or my good friend from Washington intends. But it is important that we get clear answers to these potential uncertainties on the record.

It has also been suggested that the Department of Defense should be instructed to advise Senators in those States where a ceiling reduction at IFA's may occur as to the reasons for such a decrease. This would greatly aid Congress in assuring that its intent is being implemented and would also contribute a more thorough understanding as to the source and nature of the problem.

On sum, I think we are addressing this problem reasonably given the differences of opinion involved. It is clear that we must not allow situations to recur where funds are available, there is work to be done, but for some bureaucratic or statutory reason people cannot be hired.

Mr. President, I express my appreciation to the Senator from Hawaii for his great interest and the great contribution he has made to this joint effort that concerns both of us as well as the Senator from Washington (Mr. JACKSON) and some other Members of this body, relative to the industrially funded operations.

The PRESIDING OFFICER. The Chair interrupts to ask who is yielding time to the Senator from Hawaii.

Mr. STENNIS. Mr. President, I am glad to yield 2 or 3 minutes on the bill to the Senator.

Mr. MATSUNAGA. May I have 5 minutes?

Mr. STENNIS. Other Senators have amendments they wish to call up.

Mr. MATSUNAGA. I will take 3 minutes.

Mr. STENNIS. And I will yield a couple of minutes to the Senator from Indiana.

Mr. BAYH. Mr. President, we would like to ask the Senator from Georgia, who is the distinguished chairman of the Subcommittee on Manpower and Personnel, to address himself to the language that was put in the report which really goes to resolving the problem that the Senator from Hawaii and the Senator from Indiana know have occurred at some of these industrially funded operations. Together with several of our colleagues, we offered an amendment to the bill. Because of the cooperation of the Senator from Georgia and the iniative of the Senator from Washington, we feel that this matter probably has been handled by the report language, but we want to get the assessment of the subcommittee chairman as to this language.

Mr. MATSUNAGA. If I may have the attention of the Senator from Georgia, I should like to ask him three questions.

No. 1, is the language in the committee report on H.R. 5970 intended as a directive to the Department of Defense to provide the industrially funded activities with the full manpower they require to perform their work adequately and efficiently, within the limits of the funding available to them for such purposes?

Mr. NUNN. I answer the Senator from Hawaii with a brief "yes." That is the intent. But we want to add to that the further intent and clarification that the words "industrially-funded" apply in some services different from other services.

There are some functions, for example, in the Navy that are handled by industrially funded employees and the same functions perhaps are handled by the Marine Corps with nonindustrially funded employees.

So the committee report and the committee's intention is to emphasize the importance of operations in maintenance, construction, and repair that have a direct impact on the readiness of current forces; and those categories generally include all the industrially funded civilians to whom the Senator from Hawaii makes reference, but do not include all civilian employees who happen to be accounted for by industrial fund concepts.

Mr. MATSUNAGA. I thank the Senator from Georgia.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. MATSUNAGA. I yield.

Mr. BAYH. The Senator from Georgia, I am sure, also would include certain kinds of very sophisticated research facilities in those particular categories.

Mr. NUNN. I cannot give precise definitions of what maintenance and construction and repair include in terms of varying kinds of research, but I would think that the presumption of the Senator from Indiana would be true generally.

Mr. BAYH. The type of work done by the Naval Avionics Facility in Indianapolis is almost impossible to describe because of its sophistication. However, I am sure that would fit in the category. I am not trying to throw a ringer into the situation.

Mr. NUNN. I certainly would not disagree with the interpretation of the Senator from Indiana on that because I do not have enough in-depth knowledge of that to give precise definitions.

Mr. STENNIS. Mr. President, there are some Senators who wish to offer amendments. Will the Senators finish their colloquy later?

Mr. MATSUNAGA. Is our 3 minutes up as yet?

The PRESIDING OFFICER. The Senator has a minute and a half remaining.

Mr. MATSUNAGA. May I proceed for the minute and a half?

Mr. STENNIS. All right.

Mr. MATSUNAGA. My second question is, can we not expect the Armed Services Committee, in particular the Senator's Subcommittee on Manpower and Personnel, to conduct a reexamination of this matter next year to determine; First, whether the Defense Department has adequately implemented congressional intent; and second, if so, whether such action has improved the management capabilities of our industrially funded activities?

Mr. NUNN. The answer to that question would be, "Yes", we certainly intend to include that important item as part of our overall subcommittee deliberations.

Mr. MATSUNAGA. I thank the Senator from Georgia. As one who represents a State which is deeply involved in industrially funded activities, I appreciate the distinguished chairman's response to the questions.

Mr. NUNN. I thank my colleagues from Hawaii and Indiana.

Mr. BAYH. Mr. President, if the Senator will yield back to me for a moment—and I will say that by giving us the 2 or 3 minutes the Senator is keeping us from having to introduce an amendment—I appreciate the courtesy of the Senator from Georgia. I want to thank the Senator for his patience. He has not always agreed with us, but he has been a gentleman.

What we are in essence saying is that the report says to those military service agencies to which the Senator from Georgia alluded earlier, that where a budget figure allotting so much money has been given to a facility, arbitrary manpower ceilings should not keep that money from being expended, and people should be employed to do the job as long as the work can be done efficiently, with a great degree of expertise, in that particular facility.

Mr. MATSUNAGA. I thank the Senator from Mississippi for yielding.

Mr. NUNN. I thank my colleagues from Indiana and Hawaii.

Mr. TOWER. I yield 3 minutes to the Senator from Maryland.

Mr. MATHIAS. I thank the Senator from Texas.

Mr. President, I wanted to raise a subject which I state at the outset is not strictly within the purview of this bill. It is more properly a subject for the military construction bill, but I wanted to raise it with the distinguished chairman of the committee very briefly.

The Vice President did me the great honor this year of appointing me a member of the Board of Visitors of the Naval

Academy. The Naval Academy is, of course, an institution in which we in Maryland take great pride. It is one of our most historic and time-honored educational institutions. It has produced many great Americans and, I believe, the President of the United States would share this view.

I have been to the Academy many times, and each time I come away with a new sense of the dedication with which both the faculty and the midshipmen apply themselves.

However, the last time I was there, which was within the last 10 days, I took a look at the physical education facilities. The gym at the Naval Academy is an old torpedo boat shed buit in 1905, and they just filled in the slip where the torpedo boats used to run in.

What it called the natatorium, where they get swimming training, survival training, water survival training, was built in 1924, and together they were only constructed or designed to meet the needs of a midshipmen batallion of about a third the size of the present enrollment. Of course, the swimming pool, I do not have to emphasize, is a very important facility for the Navy because of the fact that every naval officer should be expert in water survival.

So I was pleased when the chairman included in the military construction report a reference on page 15 to the need for this facility.

I am, therefore, taking this time to ask the Senator from Mississippi, who is diligent, as he always is, when I brought this matter to his attention, whether he feels that the language on page 15 of the construction indicates that the committee will give sympathetic attention to this problem in the coming year.

Mr. STENNIS. Well, I certainly anticipate that is the purpose of the language, and that is what it means.

We share, I share and I am sure other Members do, too, the concern for the need that this fine academy has for some physical improvement connected directly with every student we have there, and I commend the Senator for bringing the matter up.

Mr. MATHIAS. If I can just press the Senator a little further, I understand the Navy has already begun the design or is considering requesting design of a supplementary structure, and that the Navy currently plans to include a request for construction in the next year's military construction bill. I wonder if the Senator has that same understanding.

Mr. STENNIS. Yes, that is my information and that is my understanding. I have discussed it with a very knowledgeable staff member, and I also had a chance to discuss it with the Senator from Maryland, so I am in sympathy, and I heartily agree with his position.

Mr. MATHIAS. I appreciate the Senator's assurance. I will be talking with him further in the coming year.

Mr. STENNIS. Very good.

Mr. MATHIAS. I thank the Senator.

Mr. STENNIS. I thank the Senator very much.

The PRESIDING OFFICER. Who yields time?

UP AMENDMENT NO. 217

Mr. STEVENS. Mr. President, I have an amendment at the desk and there is a time limitation on it.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes an unprinted amendment numbered 217.

Mr. STEVENS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 53 between line 13 and 14 add new Section 803(a). If in any state there is an "emergency on" unemployment indicator as specified in Section 102(b)(3)(B)(i) of the Emergency Employment Compensation Act of 1974 (P.L. 93-572) the Secretary of Defense shall give special preference in the award of contracts for the construction of military installations in that state to any bidder who agrees to employ, to the greatest extent possible, residents of that state.

(b) The preference to be given bidders employing residents of states with high unemployment, as specified in (a), shall be calculated by subtracting from the bid or offered price an amount equal to 6 percent of the bid or offered price and authorizing contract awards based on that reduced bid or offered amount.

On page 53, line 15 renumber section beginning "This Act" Section 804.

The PRESIDING OFFICER. Is this the second amendment on which there is to be a 1-hour time limit?

Mr. STEVENS. It is. I might say to the Chair that I have no intention of taking 1 hour.

Mr. STENNIS. Mr. President, will the Senator yield to me a moment? Let me say to the Chair I think it is highly important that we have conditions here where we can hear the Senator. We do not know what this amendment is.

The PRESIDING OFFICER. The Senate will please be in order.

Mr. STENNIS. We have not had a chance to read it.

The PRESIDING OFFICER. Members of the Senate will please take their seats.

Mr. STENNIS. We have not seen it. All right, I thank the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, the problem this amendment attempts to address is that where a State has consistent high unemployment levels. Under the Emergency Employment Compensation Act of 1974 there is a triggering device of an unemployment indicator which this amendment would adopt.

The difficulty is this—and I do not think it should apply solely to military construction; I think it should apply to general U.S. Federal construction in the various States—when a State has high consistent unemployment the contractors in those States pay high administrative costs trying to keep their staffs and trying to be in position to participate in construction opportunities; that is, opportunities for construction contracts as they come along.

Unfortunately, however, there is no preference for the contractors who would hire local people when these moneys are made available through the Federal process for military construction or other Government construction, such as the GSA manages.

The purpose of this amendment would be to give preference to bidders who would employ the residents of these States of high unemployment, and to give them that preference similar to the Buy American Act by giving them a 6-percent deduction from their bid offered price as compared to those contractors from outside of that State.

It does raise some serious constitutional questions which we have been trying to address. I have discussed it with some of the members of the committee.

(Mr. METZENBAUM assumed the chair at this point.)

Mr. STEVENS. My reason for raising it is that in my State, despite the construction on the Alaska oil pipeline, we have had now steady unemployment that exceeds 10 percent, and in many areas it is as high as 60 percent unemployment, with staggering unemployment costs to the Federal Government on the extended benefits concept that we have already enacted.

I feel that there are other States that have similar problems, that we should find a way to give some preference to the bidders who will employ the labor in the area where there is this sustained high unemployment. I really believe it would reduce the total cost to the Federal Government of the unemployment programs, and it would provide a mechanism for assuring that the people, the contractors who will hire those local unemployed people, will get the award.

Unfortunately, in the last year I have had a series of letters from contractors who have pointed out to me the problems they are having in competing with people who come from the sunshine and fun country like down in Texas, and they have a full year of construction season, but they find they can come up to Alaska in the 8 to 9 weeks that we have for our construction season and bring their crews with them and perform the construction on some particular things, like repairing hangars or repairing runways on the airfields. One was a roofing contractor who wrote to me he felt very much they had been excluded from the competition because their basic overhead in order to keep their people even to a bare staff ready to participate in the contract if they were successful, was so much higher than those who had contracts and employment in other areas of the South 48 throughout the whole 12-month period.

As I said, what I really want to do is to raise this question with the chairman and the ranking member of the committee. I think that we will have an opportunity at the time the military construction appropriations bill is presented to the Senate to consider whether or not it is possible to work out some mecha-

nism to give a preference similar to the Buy American Act to those contractors who are operating in those areas of prolonged sustained unemployment where the costs, as I said, already are so great for the Federal Government in terms of maintaining the unemployment programs that we have in effect already.

I am not seeking any commitment from the chairman of the committee or the ranking Republican member. I really would ask that they address the problem. I intend to see to it that the Government Affairs Committee addresses the problem with regard to the GSA construction because I think there are too many areas where unemployment is becoming persistent and is going into periods of years. Despite the fact that there are substantial Federal moneys going into those areas for construction and despite the fact that the costs of the unemployment in the areas of the sustained unemployment are rising, we find, as I said, contractors coming in from the South 48 with full crews and mobile trailers, moving in and getting the employment and leaving; and they leave an economy that is just as bad if not worse than when they came in.

I believe that we need to address this and to try to find some way to see if it is possible—and again I say that I am cognizant of the constitutional problem but it is important—if it is possible constitutionally, to attempt to channel these jobs towards the organizations and contractors that will hire the people who have been unemployed for so long.

Again I do not ask for a commitment from the chairman. I think that perhaps if we cannot get to it in the military construction appropriations bill, maybe we can get to it next year in the authorization, either in this bill or the military construction bill.

Mr. STENNIS. Mr. President, I shall be quite brief in response to the Senator. He stated his problem before, yesterday, I believe. We discussed the legal problems involved in such legislation as this. This problem to some extent exists in many other places in other States. It belongs with military construction, as the Senator has suggested.

I would think we would have to have additional facts, though, and to that extent we have to have some hearings, an estimate of what it is going to cost the Government and to what extent this has to be followed with, some limit on it, and work out something in that way that would help. It would help, and that would be my attitude about it, the way I see it now.

Mr. STEVENS. There is a set-aside program for the contractors, but there is no assurance that those people will in fact hire from the area of the State where the persistent unemployment exists. I think it is a very difficult problem. I appreciate the Senator's comment.

As I said, if we had been able to answer the questions the Senator raised, and properly so, I would persist with the amendment. But I do not intend to do so today.

I thank the Senator.

Mr. STENNIS. I thank the Senator very much.

Mr. STEVENS. I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. STENNIS. Mr. President, so far as I know, except for one technical amendment which I hold in my hand, these are all the amendments.

UP AMENDMENT NO. 218

Mr. President, I offer on behalf of the committee a technical amendment to the bill. The amendment makes no substantive change in the funds to be authorized, but rather adjusts the figures printed in the bill to conform to the committee's action. The process of developing this bill involves many hundreds of separate programs and thousands of separate figures. One figure in the bill as printed does not conform to our action, and should be changed to reflect an arithmetical correction. It involves correcting the figure for Air Force aircraft on page 33 from $7,532,500,000 to $7,502,500,000, a difference of $30,000,000. But it really does not increase in any way the price, the cost of the matters that we passed.

Mr. TOWER. If the Senator will yield, I join him in offering that amendment.

Mr. STENNIS. I thank the Senator from Texas very much.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Mississippi (Mr. STENNIS) proposes unprinted amendment No. 218 of a technical nature.

On page 33, line 25, strike out "$7,532,500,000" and insert in lieu thereof "$7,502,500,000".

Mr. STENNIS. Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. STENNIS. I move to reconsider the vote by which the amendment was agreed to.

Mr. TOWER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CANNON. Third reading.

UP AMENDMENT NO. 219

Mr. MATHIAS. Mr. President, I have an amendment at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Maryland (Mr. MATHIAS) proposes unprinted amendment No. 219.

On page 46, line 2, strike out "76,400" and insert in lieu thereof "93,600."

Mr. MATHIAS. Mr. President, I ask unanimous consent that the distinguished Senator from New Mexico (Mr. DOMENICI) and the distinguished Senator from Connecticut (Mr. WEICKER) may be added as cosponsors to this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Will the Senator yield to me for an announcement?

Mr. MATHIAS. I yield.

Mr. STENNIS. This pending matter is perhaps the last. We will have some remarks. The Senator from Nevada has been on the floor with some very valuable remarks.

I shall ask for the rollcall on final passage of the bill. I think we ought to have a rollcall vote.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. STENNIS. I do not move now. Let us hear the Senator first.

Mr. MATHIAS. Mr. President, this amendment will be familiar to Members of the Senate because it is, in essence, the same as the Dole amendment which was acted on earlier today with one exception. I am a little more conservative than the Senator from Kansas, and therefore I have suggested a somewhat lower authorization than that proposed in the Dole amendment, that instead of 95,300, which was proposed by the Senator from Kansas, I am proposing 93,600. That is not a magic figure, but it is a figure which the House of Representatives has already agreed to. I think it is the minimum point at which we should peg the Naval Reserve.

I must speak very frankly that I am colored in my views by my own experience of 30 years of both active naval service and reserve service. I know how valuable this can be. But I am not going to belabor the point, Mr. President, because obviously this is a decision which is going to be made in conference. The conference between the House of Representatives and the Senate, is going to resolve this.

I point out, however, that the three cosponsors of this amendment, who unfortunately were detained and not able to be present at the time of the consideration of the Dole amendment, added to those who voted for the Dole amendment would be a majority in the Senate. I hope the conference will take due notice thereof and govern themselves accordingly.

Mr. GOLDWATER. Mr. President, will the Senator yield to me?

Mr. MATHIAS. I am happy to yield to the distinguished Senator.

Mr. GOLDWATER. Mr. President, I had 37 years' experience in the Reserve, and during all that time we looked upon the Navy as having the best Reserves. I will have to say that in the last 10 years or so the Navy has not seemed to be able to find any programs to keep the Naval Reserve going. This might be due to the fact that we have foolishly cut flying time in all the services; it might be due to the low state of the Navy at the present time, in which the ships of the line are older than at any time in my life.

I believe the answer to the proper use of the Naval Reserve is going to rest right in the Pentagon with the top brass in the Navy, whom we have argued with on this subject year after year after year. We have not been able to say the Navy really has jobs at which to keep these men at work. I wish they did have.

We will continue to, as we used to say, to "gig the brass," or induce them, in the Air Force, to see if we cannot get something done.

Mr. MATHIAS. Let me say to the Senator from Arizona I share his views. This really goes back to a question of motivation. If the leadership is going to motivate the troops, I think we will find a training mission here of major importance and we will get back that kind of spirit which General GOLDWATER and Ensign MATHIAS once knew. But we are not going to get that motivation back if the Congress is undercutting the program and depreciating the program by cutting the authorization.

Incidentally, I am advised that the current Chief of Naval Operations is very much in favor of the Naval Research and of making greater use of it. I believe congressional action supporting the authorization would be strengthening the hand of the Chief of Naval Operations.

Mr. NUNN. Will the Senator yield for a brief comment?

Mr. MATHIAS. I yield.

Mr. NUNN. I do not know the view of the Chief of Naval Operations, but I do want to clarify one point. The committee's position does not cut the authorization. The committee position adds 24,400 people to the request of the Department of Defense and those people are in the high skilled and priority areas of the Naval Reserve.

I agree with everything Senator GOLDWATER has said about this subject. I would like to let the Senator from Kansas, the Senator from Maryland, the Senator from New Mexico, and others who are legitimately interested in a strong Naval Reserve, know that I will join with them in any kind of letter they would like to write to the Secretary of Defense or the Chief of Naval Operations, asking them to give the Naval Reserve a meaningful mission.

I do not think we have too many men in the Naval Reserve. I think we have too many men in units that do not have a mission and which are not being utilized in a war scenario. Maybe our opinions are not that far apart. I would be glad to join in any kind of effort.

The Committee on Armed Services and the Subcommittee on Personnel, for the last 3 or 4 years, have been urging this course of action on the Navy without success. I might say if the Chief of Naval Operations is really intent on making good use of the Naval Reserve, I am sure that by this time next year he will get the job done. He did not do the job in the last 12 months in utilizing the Naval Reserve. Maybe we will see a change in that.

Mr. MATHIAS. I believe the Senator from Georgia is absolutely right. There is nothing more useless than a reservist or anybody else just sitting around playing pinochle. If there is a training mission, the training mission should be accomplished. I would like to accept the Senator's offer and join with him to see what we can do about motivating the training mission of the Reserve.

Mr. DOMENICI. Mr. President, will the Senator yield?

Mr. MATHIAS. I yield.

Mr. DOMENICI. I want to thank the Senator from Maryland for offering the amendment. I am pleased to be a cosponsor.

I am not nearly as expert on the subject as my good friend from Georgia, and certainly not as expert as Senator GOLDWATER or the chairman. But it does seem to me that we are in somewhat of a chicken-and-the-egg situation. The turmoil has been rather rampant since about 1970 as to what the Congress expected and what the Navy expected.

I join in this amendment with the distinguished Senator because I believe we have a responsibility to recognize the potential in terms of the overall preparedness of our Naval Reserve, and to set at rest once and for all the turmoil that abounds. We should send a rather clear, adroit, and specific message that we expect them to come up with a mission; that we do not intend to be niggardly about how we support that; that we really think in terms of cost effectiveness this would be a superb approach by the Navy. It is in that context that I thank the Senator for offering it.

I thank the Senator from Georgia for his observations. I understand he has been for increasing the Naval Reserve. I understand his concern about the budget, and his concern about increasing personnel costs. It does appear to this Senator that this use of manpower and ultimate effectiveness in the event we have a problem in one part of the service, in particular the Navy, which can be extremely cost effective. I join with the Senator in an effort to lend my strength in a positive approach to the Navy with reference to the appropriate level and appropriate use of the Naval Reserve.

Mr. DOLE. Mr. President, will the Senator from Maryland yield?

Mr. MATHIAS. I yield.

Mr. DOLE. I commend the distinguished Senator from Maryland and the distinguished Senator from New Mexico. It does seem to me this should give the conferees added guidance and direction when they go to conference. The Senate figure, of course, will be 76,400 and the House figure will be 93,600, the same as the Mathias-Domenici-Weicker amendment. On the basis of the discussion, I think the case has been made to strengthen the hands of the conferees. Perhaps when there is a compromise, it will be on the upper side and not the lower side. I understand there may be some give and take in conference.

Mr. NUNN. If I may respond to the Senator from Kansas, I will say as one conferee—and I speak only for myself—I would be persuaded much more by the Chief of Naval Operations writing a letter stating that he does support an increase in the Reserve figure as proposed by the House and that he will give these additional men and women in the Naval Reserve a meaningful mission to be performed if we have any kind of military confrontation.

That mission is what our committee is looking for. We are looking for a justification for this expenditure. That is what we have not had in the past. That would be very persuasive to me as a conferee, but we have not received it yet.

Mr. DOLE. Perhaps we could help stimulate such a response. I appreciate the efforts of the Senator from Georgia and the distinguished Senator from Mississippi. I also appreciate the efforts of the Senator from Maryland.

Mr. MATHIAS. If I could respond to the Senator from Georgia for a moment, when he said he would be persuaded by a letter from the Chief of Naval Operations, I had sort of a sentimental flashback to a great compatriot of the Senator from Georgia, the great Carl Vinson. Every now and then he used to say things like that when we were serving in the other body together. He would want to get the right kind of testimony, direct, honest, and candid testimony, from the witness. He would begin the hearing by looking sternly at the witness and say, "Now, Admiral, take off your muzzle."

What we need to do is to get the admiral to take off his muzzle. Then I believe we will get the answer the Senator wants.

Mr. President, as I say, regardless of what the Senate would do on this amendment, this issue is going to be resolved in conference. Rather than go through the exercise of a rollcall vote—and I suspect if we did there will be prolonged debate before we reach that point—I withdraw the amendment.

The PRESIDING OFFICER. Without objection, the amendment is withdrawn.

Mr. STENNIS. I thank the Senator from Maryland.

Mr. President, may I ask the Senator from Georgia if he will agree now that we will put in that letter to the Chief of Naval Operations and that he will give this matter his personal attention? I just feel that we need someone in real authority to reach down, open it up, and take a real look. Some of these fine units that I happen to know about are being decimated on some kind of a priority basis which I cannot understand.

Mr. NUNN. I certainly agree with the chairman. I would say that, without success, our subcommittee has tried to get the Navy to address this issue seriously over the last 3 years. They cannot get together in the Department of Defense. They have people going in different directions.

Unless the Department of Defense and the Navy do get together in this matter, it simply does not make sense to keep on saying, "These are the people you are going to keep, no matter what the waste of taxpayers' money is," because they are not giving them a mission. These are good people, good men and women in these units. They have good units with a lot of potential. But it simply has to be justified on the basis of mission as far as our subcommittee is concerned. I believe the full committee shares that feeling.

REPORT OF THE TACTICAL AIR SUBCOMMITTEE ON THE FISCAL YEAR 1978 BUDGET PROGRAMS

Mr. CANNON. Mr. President, today I will give the recommendations of the Tactical Air Subcommittee on programs which we examined in the fiscal year 1978 budget request. Our subcommittee's review covers the tactical airplanes, the tactical missiles, including air-to-air,

air-to-surface, and surface-to-air, and supporting technical areas such as tactical electronic warfare, reconnaissance and signal intelligence, and radar warning programs. The total amount of funding requested that the Tactical Air Subcommittee reviewed was $10.3 billion, of which $2.6 billion is in research and development and $7.7 billion is in procurement. The $10.3 billion is roughly 30 percent of the total authorization request of $35.9 billion. When the total Defense budget is broken down into "mission areas," tactical air usually is allocated 29 to 30 percent of the total budget, so the scope of our coverage of research and development and procurement seems in line with that overall figure.

By specific category, the programs that our subcommittee reviews include the tactical combat aircraft, that is, the air-to-air fighters and also light attack dive bombers and heavy attack all-weather airplanes. These fighters are the F-14 and F-18 for the Navy, the F-15 and F-16 for the Air Force, and of course the venerable F-4 Phantom which still is the inventory workhorse for the services and takes a significant share of modifications funding, although it no longer is being procured new.

The light attack planes include the A-7E for the Navy, AV-8B advanced Harrier in research and development for the Marines, and the A-10 for the Air Force. The F-16 also will be used for the light attack role, doing daylight dive bombing and close air support for the Air Force, and the A-18 version of the F-18 will be replacing the Navy's A-7E in the 1980's and it too will be used for that mission. The F-111 is the Air Force's all-weather attack bomber, and the A-6E is the Navy's plane in that category. The F-111 no longer is in production, and shutting off that line last year is going to prove to have been a mistake, in my opinion. The A-6E still is being built at a 12-a-year minimum sustaining rate, and it probably will continue well out into the 1980's. I will have more to say on this later.

We also review the combat support aircraft, that is, the reconnaissance, electronic jammers, radar warning, tankers, and airlift airplanes. The first three we examine in detail while the tankers and airlift are looked at by us only from a general force structuring viewpoint and are reviewed in detail by the General Procurement Subcommittee. The reconnaissance planes include Air Force RF-4C's, Marine Corps RF-4B's and the Navy's F-14 reconnaissance pod program. Electronic jamming planes are the EA-6B used by the Navy and Marines and the Air Force EF-111, a modified F-111A. The radar warning planes are the Navy E-2C and Air Force E-3A AWACS. The Navy tanker plane is the KA-6D, a modified A-6 attack bomber, the Marines use the KC-130, and of course the Air Force uses SAC's KC-135's and Air Guard KC-97's to give tanker support to its tactical fighter forces.

We also review the Army combat attack helicopters, the AH-IS Cobra/TOW and Advanced Attack Helicopter—AAH—the Hellfire missile being developed for the AAH, and this year included the Army Scout helicopters in our program.

In the surface-to-air missile SAM category, our subcommittee covers Army and Marine Corps air defense SAM's, except that on the Roland and Patriot projects the Research and Development Subcommittee gives the detailed program reviews. The Army antiaircraft guns and also Navy shipboard SAM's and close-in-defense machineguns also are in our subcommittee.

Overall, as I said before, these programs take about 30 percent of the funding in the authorization bill.

SUBCOMMITTEE SCHEDULE

We followed the same basic schedule and format as in prior years, one which happens to coincide very nicely with our new congressional budget cycle timetable. Staff reviews of the budget in February precede the start of our hearings in early March. This year we held our reviews in 12 successive working days, starting March 1st and ending on March 16, 11 hearings being on the budget request and one on the Enforcer airplane.

The first hearing was our annual threat review from the Defense Intelligence Agency, where we received an update on the order of battle of the Soviet and Warshaw Pact tactical air force, their equipment modernization program, and their new weapons R. & D. programs. Special briefing topics of interest this year included the Foxbat exploitation in Japan and the shakedown cruise of the *Kiev* carrier, from the Black Sea through the Mediterranean to the White Sea, which took place in July and August 1976.

The security classification of the DIA hearing is such that the transcript is not published. As an overall summary of what we heard, the Soviets are modernizing their tactical aircraft forces at a very rapid rate by bringing in their Mig-23 Flogger airplanes in both air-to-air fighter and air-to-ground attack versions, they are introducing SU-19 Fencer all-weather bombers at a more modest rate, are building more Foxbat high altitude reconnaissance airplanes and also swing-wing Fitter C ground attack planes. Both their air-to-air capability and ground attack/deep interdiction capability are being improved dramatically with these new generation aircraft, and our need for more capable air defenses, of both counter-air and SAM types, will continue to grow as this modernization program continues.

SCOPE OF PROGRAM REVIEWS

When the subcommittee reviews the individual items in the authorization bill, we try to perform each review within the broader context of looking at the service's force structure plan, both current status and then near-term and extended-term planning, to see how each project fits into both current and future needs. During our review we also try to keep track of similar programs in other services, to look for areas where possible savings might accrue from combining weapons systems requirements into joint programs. This year 4 of our 11 budget hearings were joint service reviews, including the topics of air-to-air missiles; air-to-ground ordnance; electronic warfare programs; and finally joint battlefield reconnaissance/intelligence, close air support, and defense suppression.

Within that broader framework, we held detailed program reviews on the budget requests for 35 major programs, plus review of a large number of other lower level R. & D. projects.

SERVICE FORCE STRUCTURES

The Air Force is not changing greatly in its buildup toward 26 wings although an increase in squadron UE from 1656 to 1680, or the increase of 1 squadron, will occur during the coming year. Primary changes during fiscal year 1978 are to complete a second wing of F-15's, to be based at Bitburg in Germany, and to start the third wing which will be based at Holloman in New Mexico. Also A-10's will be phasing in at Myrtle Beach in the second wing. The procurement program in the fiscal year 1978 budget supports F-15's, A-10's, and the first 105 F-16's, all of which will be delivered in the 1979-80 time period. This will cause F-4's and A-7D's to phase out of the active force and into the Air National Guard, allowing the Guard's modernization to continue as F-100's, A-37's, and other older airplanes are retired.

One point brought into focus in our force structure review was the potential for a lack of tactical fighter production programs in the 1980's. Under the present longer term planning, as revealed to the subcommittee during the hearings, the F-15 and A-10 production lines would stop after the fiscal year 1981 airplanes are delivered, and the F-16 would be the only tactical combat plane in production for the Air Force in the mid-1980's. This does not seem like a desirable situation, and I believe that the longer term plans should be structured to avoid this. Also there will be no replacement for the F-111 until the late 1980's, another undesirable situation.

The Navy's aircraft budget continues the modernization of their carrier air wings, based on a 12-carrier force structure, with F-14's, A-6E's, EA-6B's, and E-2C's being the primary budget requests. Our hearings this year revealed that the Navy planning is that they will not start any new airplane programs into R. & D., except V/STOL projects, out through the 1980's. The ongoing AV-8B improved Harrier and F-18 fighter/attack airplanes would be the only two new production programs starting in the early 1980's, and all other Navy procurement will be essentially attrition replacement buys of A-6E's, EA-6B's, F-14's, and E-2C's in the mid to late 1980 time period. This planning projects a rather slim market for the airplane industry in that time period.

Our hearing on the V/STOL program showed that the Navy plans to start a major program in fiscal year 1978 to develop a 'type A" V/STOL airplane, which is their designation for a subsonic cruise efficient type of design. This potentially could perform missions such as ASW—presently done by the S-3—airborne radar warning—E-2C—airlift—COD—tanker—KA-6D—and Marine Corps troop lift—CH-47. Preliminary studies indicate a plane in the 50,000 pounds weight/size category will be re-

quired, which is bigger than the S–3 and E–2C. 1OC is indicated in the 1988–90 time period. A combat V/STOL plane, called type B, is indicated as starting major development in 1980 and having a 1955 era 1OC.

V/STOL NO PANACEA

Mr. President, there is a lot of discussion going on about V/STOL as the future course for naval aviation, and I feel compelled to repeat my warning of a year ago that V/STOL designs inherently are less efficient but more expensive air vehicles than conventional airplanes, due to their high thrust-to-weight ratios, high wing loading and complex control systems. While the Navy states that it is in the process of doing total force effectiveness analyses of V/STOL, until these studies of total fleet effectiveness are done and until successful experimental prototypes are completed, I believe that we should take a position of caution regarding this move toward V/STOL. The extremely poor results to date with the thrust augmented wing prototype program, an ongoing V/STOL prototype effort, should serve to remind us of the many past failures with V/STOL prototypes and urge us to be cautious as we look to the future.

ARMY RESTRUCTURING

The Army's planning for its combat aviation has undergone a significant reassessment during the last year, with the result that a major decrease in aviation support structure will be made in order to provide an increase in the number of attack helicopter companies without increasing total manpower. The Army will recommend buying more advanced attack helicopters in the 1980's and also converting the remainder of the Cobras to the Cobra/TOW version in order to gain these added assets to increase its tooth-to-tail ratio.

Army air defense has not changed significantly since last year, although this budget request does contain a request to start a modern antiaircraft gun prototype program which potentially could result in a gun and/or ammunition common with our NATO allies in the 35 millimeter or 40 millimeter category.

MAJOR SUBCOMMITTEE RECOMMENDATIONS

Mr. President, the major recommendations for changes to the amended budget were as follows:

First. Navy aircraft; reduction of the F–14 request from 44 to 36 airplanes, reduction of F–14 advance procurement funds for fiscal year 1979 from 60 to 36 F–14's; addition of 12 A–7E's, up from the amended request calling for no A–7E procurement, and addition of advance procurement funds for 12 A–7E's in fiscal year 1979.

Second. Army aircraft; restoration of $75 million of the $100 million reduction in the budget amendment to the Army's Advanced Attack Helicoper R. & D. request; deletion of $18.3 million in R. & D. to start an interim scout helicopter, and application of the $18.3 million to start a more capable Advanced Scout Helicopter.

Third. Army missiles; restoration of $35.3 million, deleted in the budget amendment, to increase the operational readiness of the Improved Hawk SAM system; restoration of $8.3 million of the $50 million amendment reduction in the Stinger missile to provide 187 more missiles plus ground support equipment.

Fourth. Air-to-air missiles; deletion of $5.9 million requested to start a new missile to be the follow-on to the AIM–9L Sidewinder; deletion of the $23.6 million requested to start the follow-on to the advanced monopulse version of the Sparrow radar-guided missile.

More detailed comments follow on the reasons for these recommendations.

NAVY COMBAT AIRCRAFT

During the budget review cycle in calendar 1976, formulating the present fiscal year 1978 budget program that we are considering in this bill, the Office of the Secretary of Defense—OSD—made a major revision to the 5-year planning for Navy combat aircraft procurement. During that cycle, belated recognition was given by OSD to the need to continue A–6E production for the Navy and a 3-year procurement program was added in fiscal year 1978, 1979, and 1980. The Congress was instrumental in achieving this accomplishment by our addition of six A–6E's in fiscal year 1977 when none had been requested in the budget. The other major change by OSD last year was to accelerate the planned production rate of the F–14 and at the same time stop production of the A–7E light attack plane, over the objections of the Navy.

Apparently there were two reasons for this change. First was the change of the planned Navy interim reconnaissance plane, shifting from the A–7E to the F–14 as the aircraft to carry the planned camera pod to provide a reconnaissance capability when the RA–5Cs now in the inventory are retired at the end of this decade. In prior years our subcommittee had been criticizing the intended use of the A–7E for this reconnaissance role because it is too slow for that mission. The reconnaissance inventory requires about 45 to 50 planes, so there was a need for more F–14's and less A–7E's due to this shift. Despite this decrease, however, the Navy does have a valid and demonstrable requirement for procurement of 36 A–7E's to maintain its light attack force at 24 squadrons of A–7E's until the A–18 begins to replace it in the 1983 time period.

The second reason for increasing the F–14 production rate was to buy an "advanced attrition" quantity of airplanes at a faster but more economical production rate, and then to stop building F–14's after the fiscal year 1981 procurement. This increase, from 36 a year last year up to a 60 a year rate in fiscal year 1979, 1980, 1981, would have the effect of reducing the unit cost several million dollars per airplane. Buying any airplane, tank, or other item of equipment at high rate always will cut the unit cost. The unit "savings" may be illusory, however, if the total cost makes the item unaffordable. In the case of the F–14, buying at 60 a year costs $1.2 billion a year, a very difficult financial burden for the limited Naval Aviation budget.

Another planning factor brought out during our review is that the F–14's replacement now is presumed to be a high performance V/STOL airplane, called a type B by the Navy, and it will not be ready for production until perhaps 1995. There is a long R. & D. cycle which must be accomplished before this type B V/STOL is ready, and at the present time it is not within the state of the art of our aircraft technology. Closing the F–14 line in fiscal year 1981 does not make commonsense if there would be a 10 to 15 year gap until the follow-on plane is available.

Finally, as we were considering these various factors brought out in our review of the fiscal year 1978 budget plan, we began to hear stories of internal Navy budgeting studies showing severe financial shortages while starting the preparation of the fiscal year 1979 budget cycle. These funding problems, aggravated by the F–14 requirement for $1.2 billion next year, were causing some within the Navy to consider cancellation of the F–18 program in order to provide the funds for the F–14. This would be a foolish long-term solution to a near-term problem, since the F–18 is an absolutely vital part of the Navy and Marine Corps fighter/attack program of the 1980's.

In summary, when the subcommittee reviewed the total Navy combat aircraft procurement planning, we saw three problems with it: The need for continued A–7E procurement, a longer term need for continuing F–14 production out into the 1980's, and the near-term funding problems caused by the accelerated F–14 production program. The solution that seemed to be most reasonable was to reject the proposed acceleration of the F–14 production rate and insist instead on an evenly balanced Navy aircraft procurement program. For these reasons we have recommended limiting F–14 production to not more than 36 a year but planning on extending the production line out into the 1980's.

ARMY AIRCRAFT

The Army combat aircraft programs that the subcommittee examines include the attack helicopters and their associated missile and gun systems, and this year we added the Army scout helicopters.

The budget amendment reduced the R. & D. request on the advanced attack helicopter from $200 million to $100 million. The stated rationale for the reduction was the issue of attack helicopter survivability on the modern battlefield, with the new administration taking the position that this question needed further review and therefore the AAH development should be slowed down. In our hearing it was brought out that the $100 million reduction would stretch out the development program on the AAH an additional 10 months, even if full funding was restored next year and in subsequent years, and the stretched out program would cause an increase in the R. & D. cost of $115 million.

The committee does not believe that there is a valid basis for slowing the AAH program, and indeed if the new administration desired to slow spending on

attack helicopters it would have been more logical to reduce production funding for the AH-IS Cobra/TOW in this year's budget, since the Cobra is a much less capable attack helicopter than the AAH. But we have been following the Army's attack helicopter programs since our hearings on close air support in 1971, and even prior to that time, and the committee supports the Army's position that the attack helicopter survivability question has been resolved and these programs all should move forward.

The AAH will provide a quantum increase in capability over the Cobra when it enters the inventory in the early 1980's. A god analogy might be to say that the AAH is to the Cobra as the F-15 is to the F-4, that is, there is just no comparison between them. The AAH has so much more performance and agility and also for the first time for a helicopter will have the ability to fight at night and in adverse weather. These improvements in capability must be brought along without further delay.

In discussing the budget program with the Army, they already have slowed the current year development program due to the proposed fiscal year 1978 reduction and believe that they can not efficiently use more than $175 million in fiscal year 1978, so we only restored $75 million of the $100 million reduction. Nevertheless we recommend that the AAH be fully supported in subsequent years and be brought back to the original schedule if possible.

On the request for an interim scout helicopter, the Army would have added a laser designator system to the old Huey troop-lift helicopter to provide an "interim" capability to complement the AAH. This scout role for the Huey would result in a large, not very agile, day-only scout; in other words one that would not be a very impressive adjunct to the AAH. It also would be an expensive program, with an investment cost of nearly $300 million. We believe that those funds should be applied to the development of the advanced scout helicopter—ASH—one that the Army has tried to start for the last several years. The ASH will be small, have AAH performance and agility, the same night and adverse weather capability, and will be a true battlefield partner to the AAH. Therefore we reallocated the interim scout funds to start the ASH program.

ARMY MISSILES

In reviewing the amended budget, the subcommittee felt that the proposed reduction of $35.3 million from the Improved Hawk was a mistake. The Army would use those funds to convert Basic Hawk ground launcher batteries to the Improved Hawk configuration to act as a "maintenance float", that is, a set of spare equipments that would provide replacements for operations batteries when they need maintenance and depot overhaul. The Improved Hawk system has had readiness problems, not because of the missile which is a modern solid state design, but because the ground equipment is vacuum tube era technology which is only partly modernized when it is converted to the Improved Hawk configuration. Since this missile system is the Army's primary SAM system and is the mainstay of Army air defenses. it is urgent that it be fully supported and we restored the funds.

For the Stinger shoulder-launched small SAM missile, we recommended a partial restoration of the amendment reduction. The original budget request was for $84.0 million for 890 Stinger missiles, with production to be split between two producers. Since this is the first year of production, it seems premature to establish a second source to build the missile until the company that developed the missile has a chance to work the "bugs" out of the production line. Therefore we agreed with the amendment position that only one company should build Stinger this year, but we did add back funds for ground support equipment, primarily training aids, and also to buy more missiles; that is, half of the 890 originally requested.

AIR-TO-AIR MISSILES

Mr. President, as a lead-in to the discussion on air-to-air missiles, I would like to quote from the committee's report:

AIR-TO-AIR MISSILES

CURRENT BUDGET PROGRAM

The Air Force, Navy, and Marine Corps fighter aircraft currently operate with three types of air-to-air missiles; the short range dogfight Sidewinder heat-seeking missile; the medium range all-weather Sparrow radar-guided missile: and the long range Phoenix interceptor missile (presently used only on the Navy F-14). The "Sea Sparrow" also is used as a surface-to-air missile on Navy ships, and a variant of the Sidewinder is used as a SAM missile by the Army.

The committee recommends approval of the procurement requests for Sidewinder, Sparrow, and Phoenix.

Research and development requests for fiscal year 1978 for air-to-air missiles include $5.9 million for improvements to the AIM-9L Sidewinder plus $5.9 million for a new dogfight missile to replace the Sidewinder; $18.9 million for an Advanced Monopulse Seeker for the Sparrow, $6.4 million for the NATO Sea Sparrow, plus $23.6 million for a new Advanced Medium Range Air-to-Air Missile (AMRAAM) to replace the Sparrow; $7.1 million for Phoenix improvements; and $3.9 million for studies of a Shipboard Intermediate Range Combat System (SIRCS) program for the Navy which would include a new missile to replace the Sea Sparrow. There also is general supporting technology effort for an Advanced Intercept Missile (AIM), which would replace the Phoenix and which could be used by both the Air Force and Navy, although no specific program has been started yet. In summary, there are product improvement efforts on the existing missiles and also funding on replacement programs for all of the existing missiles.

COMMITTEE CONSIDERATIONS

The committee believes that the status of the present air-to-air missile program is quite encouraging.

The Sidewinder-9L is proving in operational tests to be a superior weapons system. Both the Air Force and Navy are procuring this missile in common after years of using different versions of the basic Sidewinder.

The Sparrow missile has known and much-publicized operational shortcomings in its present-7F seeker, but competitive prototype tests of the new monopulse seeker have been extremely favorable. The monopulse Sparrow promises to be a superior missile for the 1980s time period. Both the Air Force and Navy will use the monopulse Sparrow, which will retain commonality in their medium range inventory.

The Phoenix has been extremely successful in operational trials to date and the improvement program should make it better.

COMMITTEE RECOMMENDATIONS

The committee is concerned that the proposed new development programs could lead to a proliferation of different missile types in the 1980s, as contrasted to present use of 3 basic designs. Proliferation of air-to-ground weapons has been a problem in the past and potentially it could occur with air-to-air missiles.

The committee recommends that careful analyses of presently on-going operational tests on dogfight missiles (called AIMVAL/ACEVAL) be completed to determine if any new program is warranted or if the -9L should be further improved. The committee deleted the $5.9 million requested for a new program as being premature, and further insists that any new dogfight missile be used in common by both the Air Force and Navy and be jointly funded.

The committee believes that the request to start AMRAAM prototypes this year also is premature and deleted the $23.6 million requested. The implied requirements for 2 new missiles to replace the Sparrow (AMRAAM and SIRCS) should be re-evaluated during the coming year, as should the possibility of combining the AIM Intercept Missile into the Sparrow replacement. There is $5.0 million carryover available from fiscal year 1977 in the AMRAAM account that can be used for this purpose, as well as the SIRCS funds approved by the committee.

The committee also recommends that the Department of Defense reevaluate the use of the present -9L Sidewinder fuse to see if lower cost fuses such as the Army's DIDO might not be more cost-effective.

Mr. President, I cannot emphasize too highly the need for interservice commonality and the importance of preventing duplication and proliferation in the air-to-air missile program. The House and Senate Armed Services Committees have had to take the lead in controlling air-to-air missile R. & D. in the last few years, primarily I believe because of the failure within D.D.R. & E. to coordinate the programs emerging from the services. Congress has cancelled the Air Force Claw and Navy Agile, which would have been single service replacements for the Sidewinder. Congress cancelled the lightweight radar missile, which would have been a duplication of Sparrow capability. Now again this year we are asking for a re-evaluation of the AMRAAM, SIRCS, and AIM missiles to see if these three programs cannot be combined into two or possibly one new missile for the mid 1980's. If we can combine the programs it will save a large R. & D. cost, will result in higher volume production of one—or two—designs and therefore unit savings, and will cut down on the costs of depot-level support and the overall logistics train needed for each individual system.

While we have recommended applying $5 million of carryover funding from the AMRAAM and the $3.9 million requested for SIRCS to further the industry studies during fiscal year 1978, I personally would be prepared to support reprogram-

ing of more funds to these projects during the year if it is needed to resolve the issue in a timely manner.

While commenting on the general subject of commonality between the services and the need to prevent proliferation, I would observe that proposals to use the British Skyflash missile in a limited inventory buy for the Air Force or Navy would go directly against this principle. The Skyflash is a monopulse version of the AIM–7E Sparrow which is being developed by the United Kingdom and is looking very promising during its R. & D. firing trials taking place at the Navy test range at Point Mugu, Calif. The United States monopulse Sparrow is being developed on the AIM–7F Sparrow airframe, which has a more powerful rocket motor and larger warhead than the 7E Sparrow. It thus has more range and killing power and overall is somewhat more advanced technically than Skyflash. But its primary attribute is that the U.S. Advanced Monopulse will be interoperable on all Air Force and Navy fighters that fire Sparrow, whereas Skyflash would not be useable on the F–15. Therefore the committee urges that the development of the U.S. monopulse Sparrow be expedited as much as is possible under an orderly R. & D. program, as that program will provide missile commonality.

Mr. President, this concludes my remarks on the Tactical Air Subcommittee's review of the fiscal year 1978 budget programs.

THE F–18 PROGRAM

Mr. President, I would like to address some further remarks to the F–18 program and state why I believe it is vital to Naval Aviation in the 1980's. First lets consider its role in the Navy and Marine Corps.

For the Navy, the F–18 will be replacing the A–7E light attack dive bombers and will be known as the A–18, although the difference from the F–18 is only in changing a few radios and pilot cockpit display scopes. The Navy inventory requirement is for 2 12-plane squadrons per carrier, or 24 squadrons in all for a 12-carrier Navy. The A–18 will have the same outstanding bombing capability as the A–7E, will have almost the same range and payload, but most importantly the F–18 will have the performance needed to survive in the fighter and SAM missile environment of the future.

The F–18 has the same kind of airplane performance as the Air Force's F–15 and F–16, and the Navy needs this kind of capability in its combat airplanes. The A–7E can not be upgraded to achieve the high acceleration and tight turn performance of these new generation airplanes, and the Navy should not ask its attack pilots to go into combat with lesser capability when the F–18 is available in the early 1980's. Thus Navy combat airplanes in the 1980's and early 1990's will be the F–14 fighter, A–18 attack plane, and A–6E heavy all-weather bomber, with both the F–14 and F–18 being modern era aircraft.

The Marines plan to replace their 12 squadrons of F–4 fighters with the F–18 starting in 1982. Here again, the F–4 is obsolescent and not up to surviving in the modern threat environment, and the Marines also need the excellent ground attack capability that the F–18 will give them. The Marine aviation force structure in the 1980's and early 1990's will be composed of F–18 fighters, AV–8B advanced Harrier V/STOL light attack bombers, and A–6E all-weather attack bombers. Both the F–18 and AV–8B are advanced designs now in R. & D., so the A–6E will be the only "old" plane in their inventory.

PILOT COMMENTS ON F–18

Mr. President, in our hearing this year we called a veteran Navy fighter pilot who has flown the F–17, prototype of the F–18, to testify about the plane's performance. This Navy lieutenant commander runs the Navy's dogfight training school at NAS Mirimar in California and has flown the F–4, A–7E and F–14 so he not only is a highly qualified fighter pilot, but he is in a position to make valid comparisons between these planes. He stated that the F–18 will defeat the F–4 and the F–14 in a dogfight "hands-down". He also said in no uncertain terms that the F–18 is needed to replace the A–7E for the attack role.

Mr. President, I ask unanimous consent that the transscript of his testimony and also a copy of the pilot's report be included int he record at the conclusion of my remarks. I think it makes colorful and very informative reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

NO GOOD ALTERNATIVES TO THE F–18

Mr. CANNON. As I said in my earlier remarks on the budget recommendations of the Tactical Air Subcommittee, the current financial problem the Navy has in preparing the fiscal year 1979 budget are causing some within the Navy to consider canceling the F–18 program. The primary cause of the financial squeeze is the $1.2 billion cost of the F–14 next year, which is why the committee recommended holding F–14 production at no more than 36 a year. But let us examine the alternatives if the F–18 was terminated.

For the Navy's light attack inventory, the only two reasonable possibilities are a reengined A–7E or the AV–8B Harrier. Neither of these should be very attractive. A reengined A–7 still will have only a small performance improvement over the basic A–7E in lieu of the quantum improvement provided in the F–18. The AV–8B V/STOL would be a step backwards, as that plane is no better in range and payload than the A–4M. The reason the Navy abandoned A–4's in the early 1960's to develop the A–7 was because the A–4 had inadequate range for the carrier-based attack mission.

As for the Marines, if the F–18 is not available the Marine's will have to stay in F–4's until they are attrited out in the late 1980's, and then they would have to go to the F–14 as the only available fighter until V/STOL designs come along in the 1990's. Since the Marines have already rejected the F–14 as being too big, expensive, and hard to maintain, that plane does not seem like a reasonable alternative to the F–18.

SUMMARY

Mr. President, it is for the reasons discussed above that I believe the F–18 is vital to the future of Navy and Marine aviation in the 1980's and 1990's. The alternatives are simply bad alternatives.

If funding is the basic problem, then the solution that the committee proposes seems most reasonable. The Navy needs both F–14's and F–18's. It already has over 300 F–14's ordered, so if procurement of one or the other must be slowed, the F–14 should be the one, in order that the total force can be balanced.

Mr. President, that concludes my remarks.

EXHIBIT 1

FLIGHT TESTS ON F–18 PROTOTYPE

Mr. CROMWELL. Is Lt. Comdr. Monroe Smith here?

Commander SMITH. Yes, sir.

Mr. CROMWELL. Would you come up, please. Would you identify for the RECORD and say what your present job is in the Navy?

Commander SMITH. I am Lt. Comdr. Monroe Smith, commanding officer of the Navy Fighter Weapons School at NAS Miramar, Calif.

Mr. CROMWELL. Did you fly the Northrop YF–17 prototype?

Commander SMITH. I flew it the first week of March for 2 days; the first and second of March.

Mr. CROMWELL. How many flight hours did you have?

Commander SMITH. I had a total of six flights totaling 4.7 hours flight time.

Mr. CROMWELL. What was your impression of that airplane as a potential fighter?

Commander SMITH. I was very much impressed with the airplane because of its high thrust-to-weight ratio and its high maneuverability. Every fighter pilot wants more thrust and will accept the penalties of less gas; but that is speaking from a personal point of view. The Navy has always had to accept an airplane that was a little underpowered relative to thrust/weight because of the increased weight requirements associated with landing aboard ship. We have always paid a price for carrier suitability in terms of thrust to weight in our fighters.

Mr. CROMWELL. How did the performance of the prototype compare with the other Navy fighters that you have flown, or any other fighters?

Commander SMITH. Sir, I have flown everything from the F–86H to the F–14. In the Navy Fighter Weapons School we fly A–4 Echoes—we have the F–5E's and of course the T–38. I have flown the F–14 for more than 500 hours and I have over 100 carrier landings in that airplane.

Mr. CROMWELL. Have you ever flown the F–4?

Commander SMITH. I have over 2,000 hours in the F–4 both as a pilot and as a naval flight officer. I have over 300 carrier landings in the F–4.

Mr. CROMWELL. If you had to fly the F–18 against the F–4 how would they do against each other?

Commander SMITH. There is no real comparison to be made here. If you are talking about a day visual engagement, as I saw the YF–17, it is superior to any tactical fighter we have in the Naval inventory. If you are talking about a day visual air-combat engagement; commencing from a head-on pass at 15,000 feet, 400 knots—or you pick the initial conditions—in a one versus one sterile environment, the YF–17 will be superior every single time.

Mr. CROMWELL. Would it beat the slatted F–4?

Commander SMITH. Yes, sir.

Mr. CROMWELL. How about the F–14?

Commander SMITH. It will beat the F–14.

Mr. CROMWELL. Hands down?

Commander SMITH. In my opinion; yes, sir.

Mr. CROMWELL. What was the overall purpose of your flight evaluation?

Commander SMITH. Well, sir, I am commanding officer of Navy Fighter Weapons School and we have no charter to evaluate new hardware or equipment. We instruct postgraduate level tactics in fleet fighters. However, my background is such that I have enjoyed a tour in air test and evaluation squadron 4 and was the F-14 project officer from 1971 through 1973. I do understand operational evaluation and I flew these flights to assess the tactical applicability of the YF-17 as it existed in the prototype in the day VFR environment. I felt that I could give my opinion on flying qualities and performance as a graduate level fighter tactics instructor but not as a test pilot. I am not a designated test pilot.

Mr. CROMWELL. Did you write a report on your flights?

Commander SMITH. Yes, sir. I did write a report. It was in the form of a letter from my Command to the commander, Fighter Airborne Early Warning Wing Pacific.

Mr. CROMWELL. No copies?

Commander SMITH. No copies.

Mr. CROMWELL. Would you give us a summary, a verbal summary?

Commander SMITH. Yes, sir, it laid out the statistics of the flights. They were flown on the first and second of March. Two flights were flown out of Miramar and four flights out of Yuma, Ariz. Two flights took place over water in a warning area utilizing my F-5E aircraft as chase, target, and adversary. The four flights in Yuma took place on the air-combat maneuvering range and utilized two F-5E's versus me in the YF-17. I pitted myself against my own expert tactics instructors in F-5E's for four flights. Basically those four flights were "no holds barred, the sky is the limit, and call it like you see it."

Mr. CROMWELL. Did you win?

Commander SMITH. Quite frankly, I got shot every single time. And this is nothing more than what we have seen everytime we heavily engage in a turning dogfight given a multitarget environment against small airplanes that you can't maintain sight of. As long as I attempted to keep both aircraft in sight I could control the fight very easily. When I decided to go in for a gun attack on one fighter, that left the other airplane free to maneuver to my "blind side" for an attack. During the last flight it took 4 minutes for this to happen. During that extended engagement I fired a number of high angle gun shots prior to being shot myself with a simulated missile. But we are talking now of tactics and not aircraft performance. My job was to assess every aspect of the airplane in simulated combat which, by design and intent, placed it in an environment where it couldn't survive.

Mr. CROMWELL. Right. Have you flown the A-7E?

Commander SMITH. Yes, sir; I have flown over 50 hours in the A-7E and I have had some number of practice bombing missions with the airplane.

Mr. CROMWELL. How do you assess the performance, the advantages of the A-18 as shown in the prototype over the A-7E? What performance advantages would it have and how do you feel they would be useful tactically?

Commander SMITH. The A-7E is a very effective bomber. No one doubts that. However, it is underpowered in my opinion. The YF-17 with the extremely high thrust to weight ratio that it enjoys—of course I am talking about in the fighter version and I am not sure what the thrust to weight is in the attack version—I would have to get that from Captain Lenox and performance assessment would only be conjecture on my part.

Captain LENOX. It is the same.

Commander SMITH. He says it is the same. However, the A-7, once it is loaded with bombs can barely maintain [deleted] knots indicated airspeed at 15,000 feet. It certainly can't execute defensive maneuvers without jettisoning it's external stores. We fly against the A-7s, seven times a year at the Navy Fighter Weapons School. Once the A-7E comes under attack by the F-5E, it cannot get away. We kill him every single time. The F-5E is a very close simulator to the MIG 21. If a MIG-21 jumps an A-7 with intent to shoot him, the A-7 driver is going to get it! It is that simple. This is due in part to the fact that the A-7 is a subsonic airplane. The YF-17, of course, could jettison ordnance and go supersonic among other things. Also the A-7, once forced to execute a high G break against a SAM, or whatever—a missile break to defeat an air-to-air missile—will quickly lose altitude and/or air speed. Without thrust to weight you cannot maintain air speed and altitude so you either have to jettison bombs in my opinion, or you have to be shot or you have to go down to a very low altitude and hope you are no longer under attack. In any case, it is my opinion that high thrust to weight is needed in the attack airplane, not just to go supersonic but to ingress and egress from a target with high speed, good maneuverability, and hopefully, increased survivability. I do believe this increases survivability as well as combat effectiveness.

Mr. CROMWELL. Thank you very much, Commander.

NAVY FIGHTER WEAPONS SCHOOL,
NAVAL AIR STATION MIRAMAR,
San Diego, Calif., March 11, 1977.

From: Commanding Officer, Navy Fighter Weapons School.

To: Commander Fighter Airborne Early Warning Wing, U.S. Pacific Fleet.

Subj: YF-17A Tail Nr. 10569 (F-18 Prototype) Flight Report.

Ref: (a) COMNAVAIRSYSCOM 152030Z Feb. 77.

1. Background. Reference (a) authorized YF-17A prototype familiarization flights for the Commanding Officer, Navy Fighter Weapons School during the week of 28 FEB-4 MAR 1977. Intent was to provide exposure of the aircraft to NAS Miramar aircrews and to allow an early, subjective evaluation of the prototype in simulated Air Combat Maneuvering (ACM). NFWS has no charter to technically or operationally evaluate new aircraft or equipment. The CO of NFWS previously conducted a seven flight Initial Operation Test and Evaluation (IOT&E) of the F-14A in SEP/OCT 1972 and a six flight IOT&E of the Navy's slatted F-4J in DEC 1972 when assigned as a project officer at VX-4. The purpose of this letter is to document pilot preparation prior to flight, the statistics and narrative of these flights, and to submit pilot opinion of the flying qualities and performance of the YF-17A prototype.

2. Preflight preparation:

a. MACAIR. One and one-half days were spent at MACAIR/St. Louis, Tues., 22 through Thurs., 24 FEB 77, with intensive F-18 production airplane briefings being given. Contractor specifications of performance, maintainability and reliability were presented. Approximately 2 hours were spent in the F-18 flight simulator analyzing cockpit systems and weapons systems, and weapons systems/pilot interface functions. Additionally, the actual cockpit mock-up was made available for review and critique. The purpose of this trip was to provide information necessary to draw parallels (Opinions/conclusions) between actual YF-17A prototype and proposed F-18 production airplane performance. Briefings were pilot oriented, but still touched on all critical design and production issues.

b. NORTHROP. Fri, 25 FEB was spent at NORTHROP/Hawthorne with a quick trip to Palmdale for actual YF-17A cockpit check out and airplane preflight. This day was necessarily dedicated to design concepts as incorporated into the YF-17A, aircraft subsystems, and emergency procedures. Briefings were thorough, interesting and not overwhelming.

3. YF-17A Delivery to Miramar. The YF-17A was flown from Palmdale to Miramar by Mr. Hank Chouteau, Northrop Test Pilot, Monday, 28 Feb. at 1630. An P-5E was "scrambled" for intercept/escort into the Miramar traffic pattern since the YF-17A had no TACAN and the pilot was unfamiliar with Miramar course rules. A low altitude fly-by was conducted prior to landing.

4. Flight Statistics:

Flight, date, duration, area, and mission:

1, 1 Mar. 77, 60 min., P-1 (W-291), FAM.

2, 1 Mar. 77, 50 min., P-2 (W-291), PERF COMP F-14/F-5.

3, 2 Mar. 77, 55 min., R-2507, X-C TO YUMA/1 VS 2.

4, 2 Mar. 77, 55 min., ACMR, 1 VS 2.

5, 2 Mar. 77, 30 min., ACMR, 1 VS 2/PERF COMP F-14.

6, 2 Mar. 77, 35 min., ACMR, 1 VS 2.

(Six flights in 2 days totaling 4.7 hours.)

5. Narrative of Each Flight:

a. FLIGHT No. 1. FAM; chased by NORTHROP Test Pilot, Mr. Hank Chouteau in NFWS F-5E. Additional F-5E with NFWS instructor, LT TAYLOR, provided performance comparison. VF-126 TA-4, pilot, LT BORICH flying NORTHROP photographer, Mr. Ed Reiley also accompanied the flight. Typical FAM maneuvers were performed including slow flight, 1 "G" stalls, and high AOA flying qualities. One "G" level acceleration performance was compared with the F-5T at 20,000 ft MSL. YF-17A used mil power while the F-5E used maximum A/B. Results; YF-17A exactly matched the F-5E with no noticable trends from 250 KTS to 500 KTS IAS. . . . IMPRESSIVE! Gunsight tracking on the F-5E and heavy tail chase were also conducted along low altitude investigation of high speed rolling performance.

b. Flight No. 2. Performance comparison with F-14A and F-5E. VF-213 F-14A TOPGUN student crew LT SHAFFER/LT CARLSON performed the exercise with NFWS instructor LT NATHMAN flying the F-5E. VF-126 CO, CDR SCHOENFELDT flew the TA-4 photochase with NORTHROP photographer, Mr. Ed Reiley aboard.

(1) YF-17A VS F-14A (Block-90). Only subsonic, level acceleration tests, zoom climb performance and sustained turning performance comparisons were conducted. As expected, the YF-17A was superior in every case. Maximum acceleration was compared from 310KTS to 500 KTS IAS at approximately 20,000 ft MSL. Initially, the YF-17A leaped ahead of the F-14A, but approaching MACH 1.0, the F-14A stopped the relative opening rate. Analysis of contractor data made this predictable. One max power zoom climb from 15,000 ft MSL/350 KTS to 33,000 ft was conducted with the YF-17A finishing an estimated 5000 ft above the F-14A at the same airspeed (approx 150 KTS). During gunsight tracking exercises, the YF-17A enjoyed a power advantage over the F-14A even at 300 KTS where F-14A block-90 slats provide a noticeable increase in performance.

(2) YF-17A VS F-5E 1 VS 1. One head-on, co-altitude, co-speed set up was conducted with the YF-17A using military power only and the F-5E using maximum A/B. The YF-17A easily forced the F-5E into a defensive position in 2 turns. The fight was terminated in a nose down spiral at 11,000 ft MSL with the F-5E defensive.

c. Flight No. 3. Cross country from Miramar to Yuma, via R-2507 for 1 VS 2 F-5E enroute: NFWS instructors Maj. Rietsch and Capt. Hoyt. One engagement was conducted head-on at approx. 20,000 ft. MSL. While the YF-17A could easily force one F-5E into

a defensive position, the other F-5E was normally able to maneuver to the "Blind Side" of the engagement and take a "Shot of Opportunity". This was seen on every engagement and every flight. Only one long engagement was conducted. The YF-17A continued to Yuma while the F-5E's recovered at Miramar.

d. Flight No. 4. 1 VS 2 F-5E on ACMR. NFWS instructors Lt. Pace and Lt. Barwick. Two engagements were conducted. Again, the YF-17A easily controlled the fight and could engage/disengage at will. The YF-17A speed brake was considered to be totally ineffective at all speeds. This, coupled with inadequate "Back Stick" available at slow airspeeds precluded ""Saddling Up" on the F-5E for a classic guns kill. As before, once heavy prosecution of a particular F-5E began, the "Free F-5E" was able to maneuver either out of visual acuity range or to the "Blind Side" of the fight and call a Sidewinder type shot. YF-17A speed was maintained between 200 and 350 KTS and the maximum "G" recorded was 6.0. Military power only was used above 250 KTS and, on this mission the YF-17T drove the F-5E's down to Bingo.

e. Flight No. 5. 1 VS 2 F-5E on ACMR and YF-17A/F-14A accel and turn performance. NFWS instructors Lt. Garland and Lt. Harris. VF-124 F-14A eight crew was LCDR GILES and Lt. McCabe. Two engagements were conducted with F-5E's. Attempt to fight YF-17A below 200 KTS after commencing engagements was made. NFWS instructors performed superior loose deuce tactics on YF-17T and, due to the slow speed "Corner of the Envelope" being evaluated, were able to "Blow it Away". Analysis of YF-17A ability to defeat guns tracking was made. Thrust-to-weight better than one-to-one played a significant role in the ability of YF-17A to escape guns attack; however, escape from below 200 KTS *was not* "Scott Free" or instantaneous. At airspeeds ranging from 80 KTS to 200 KTS, it appeared that the control stick was "Back Against the Seat" and more "Pitch/Nose Up" horizontal tail authority was needed. Additionally, at angles of attack ranging from 22° to 28° *True*, the aircraft stability declined and the controls appeared to "Wash Out" or become sluggish relative to pilot in-put/commands. It must be noted, however, that at No time did the YF-17A ever exhibit any tendency to depart controlled flight. F-5E pilots could not keep each other in sight throughout enagagements but could maintain sight of the YF-17A due to its large size. This made it easier to set up a "Blind Side" attack. The size of the YF-17A was considered slightly smaller than an F-4 by most instructors. On this mission a maximum of 6.5 "G" was recorded and A/B was not used above 200KTS. It was noted that once the YF-17A was "Loaded Up" at high angles of attack below 200 KTS, maximum A/B did not provide a "Magic" increase in performance in spite of its high thrust-to-weight ratio. It did provide about ½ "G" additional performance. This is not unlike the F-14A or any other fighter flown to date. The result was high fuel consumption with very little increase in performance. Prior to this flight, it was anticipated that performance in this very slow environment would be somewhat better. The F-5E's drove the YF-17A down to Bingo fuel. Prior to departing ACMR one Max power level acceleration comparison with an F-14A was conducted at 18,000 ft. MSL from approximately 300 to 425 KTS. The YF-17A had 1500 lbs. fuel remaining while the F-14A had approx. 11,500 lbs., but the results were eye watering. The F-14A then took a guns tracking position and a turn was commenced smoothly increasing "G" with a corresponding decrease in airspeed. Increased power was required by both aircraft to sustain flight in this environment. The F-14A required maximum/zone-5 A/B to stay in position at 200 KTS while the YF-17A used only military power. The YF-17A was light on fuel, but results were indicative of all other performance comparisons observed up to this point.

f. Flight No. 6. 1 VS 2 F-5E on ACMR, but no ACMR PODS were carried and no data taken due to late afternoon/overtime involved. NFWS instructors Lt. Garland and Lt. Harris again participated. YF-17A speed was maintained between 250 and 450 KTS, and A/B was normally not deselected below 300 KTS. A maximum of 7.5 "G" was recorded on this mission with the F-5's driving the YF-17A down to Bingo fuel state. The first engagement was aborted after the initial pass/zoom to 32,000 ft MSL due to failure of the YF-17A cockpit pressurization. After descent/reset, the fight was commenced. The YF-17A easily controlled this engagement and switched several times between the F-5E's. As before, the instructors performed loose deuce tactics flawlessly and, after approximately four minutes, achieved a Sidewinder "Kill" on the YF-17A. Another engagement was commenced, however, the YF-17A combat fuel package was such that only military power could be utilized. While this appeared to be adequate in 1 VS 1 against a single F-5E, it could not be effectively used against expert NFWS fighter pilots in 1 VS 2 environment. Another Sidewinder type "Kill" was achieved on the YF-17A and all aircraft returned to Yuma.

6. Pilot opinion and observations:

a. YF-17A size and paint scheme. Head-on/tail-on, the YF-17A is relatively small. NFWS instructors had little difficulty in maintaining sight of the YF-17A during ACM. It was generally concluded to be slightly more difficult to see than the F-4. Enclosure (1) is a photo that provides comparison of YF-17A/F-5E/TA-4 in planform. Paint scheme was Topgun camoflaged gray and was considered exceptionally good at all times of the day over both sea and desert.

b. Pilot field of view from the cockpit is superior to any tactical operational aircraft. The only obstruction to rearward visibility is the headrest of the ejection seat. It was impressive to note that the angle of the canopy plexiglass was such that the pilot could see through it when looking aft as it did not pick up any cockpit or hardware reflections. This is not the case in the F-14A.

c. Canopy height above the pilot's helmet is very small. Anticipate canopy scratches from pilots helmets. Recommend off-set visor knobs (such as those used on UNSAT dual visor helmets) be investigated.

d. Pilot adjustable sitting height, relative reach to control stick and general cockpit comfort was outstanding. This included rudder pedal reach, rudder pedal angle and all other environmental factors too numerous to mention. Reach to the throttle and total travel from idle to max A/B was equally superb.

e. A single throttle controlling both engines (peculiar to YF-17A prototype only) was installed as per USAF requirements. The USAF praised the single throttle concept. This in itself tells a great deal about the Air Force.

f. The YJ-101 engines were flawless. Starting was the hardest part. Engines had to be motored over at 30 percent for 60 seconds prior to selecting throttle on. Ignition was automatic. Then, engines had a slight tendency to "Hang-up" at 69 percent . . . just under idle of 71-74 percent. Ground idle produced so much thrust that the brakes had to be applied constantly. Engine acceleration was extremely quick from idle to max A/B. During flight, no smoke was ever observed in basic engine. Every A/B light and de-select was broadcast over UHF. Never was a single burner puff observed by anyone at any altitude from 5,000 to 35,000 ft MSL! Increased oil consumption was noticed on one engine by the Northrop crew, but no oil pressure deviation was observed by the pilot on any flight.

g. Post start checks were simple and the aircraft was clean after every hop. No maintenance problems were incurred in 6 flights.

h. Unlike the F-14A, the YF-17A flaps were fully automatic throughout the flight envelope and trouble free! Take-off, raise the landing gear and the flaps take care of themselves. Below 21° true AOA, there was never any sensation of the flaps transitioning from one position to another. Above 22° true AOA, it is hypothesized that some of the control "wash out" previously mentioned was due to the trailing edge flaps raising.

i. The YF-17A was considered to be as simple to fly as the F-5E with the same resistance to departures and/or spins. Aileron/rudder interconnects worked effectively and almost any pilot command of rudder was too much. The aircraft was exceptionally stable at all airspeeds up to 1.2 MACH and very little longitudinal trim change was ever required from take-off to landing. Formation flying was smooth with no "neutral static stability" characteristics being apparent as previously thought.

j. Landing. The YF-17A has a slight tendency to "float" in ground effect, but has no adverse landing configuration related problems. Approach angle is low; over-the-nose visibility is very good and aerodynamic braking is effective. Main Landing Gear (MLG) wheels/brakes were basically F-5E hardware and at the upper limit of their capability. Even so, hot brakes were not a problem. High crosswinds prevailed at Miramar on 1 MAR 77. YF-17A crosswind limits were advertised at 90°/15 KTS. According to tower reports of landing winds, these limits were exceeded on 3 out of six flights. Even though distance between the MLG was small, directional control was good during landing roll and aileron authority was more than adequate to hold the wing down during gusty wind conditions.

7. Tactical utility:

a. Attack mission. NFWS believes the subsonic A-7E is highly vulnerable when laden with air-to-ground ordnance and penetrating a high threat environment. This is proven on every ALFA Strike graduation exercise with every Topgun class. The A-7's total lack of excess power and poor maneuverability leave it few alternatives for escape once under attack. While ordnance load and system accuracies cannot be addressed, it is clear that the fantastic increases of the YF-17A in maneuverability and acceleration over the A-7E provide tactical capability never before achieved in a single seat attack aircraft. A self defense capability must be inherent in every tactical aircraft of the future; the reasons are obvious.

b. Fighter mission. The YF-17A is not a small, light weight fighter until it is compared to the F-14A. In a sterile 1 VS 1 dogfight, there is little doubt that the YF-17A would be superior to the F-14A. The F-14A has 2 crewmembers, but due to its physical size, not one has ever survived a 1 VS Many exercise at Topgun. On the other hand, many F-4B/J's have survived. Whether or not the YF-17A could survive in this environment is a matter of conjecture. It normally follows that loose deuce tactics increase the survivability of a single cockpit aircraft. AIM/ACE EVAL is proving this.

8. The Navy can utilize the F/A-18 immediately. My greatest concern is the unacceptable time lag between now (1977) and (1985) when a reasonable number could be placed into the fleet. This means the Navy will be going into the 1990's with a 1970 airplane. This is UNSAT! It does not "HAVE TO BE". In spite of DSARC and RED TAPE, testing can be shortened and production accelerated. New concepts of VSTOL and thrust vectoring must be considered for 1990 air-

craft if tactical air power is to survive in the 21st century.

J. M. SMITH.

Mr. GOLDWATER. Mr. President, once again it is my pleasure to support my good friend and colleague HOWARD CANNON and the report and recommendations in this bill on tactical air matters. As ranking minority member of the Tactical Aircraft Subcommittee, I want to assure my colleagues that it is my judgment that the recommendations are sound ones and will improve the strength of our tactical forces.

In my report, which will be brief, I intend to highlight those major recommendations that may be of interest to the Senate. The details of all the programs are, of course, provided in the committee report.

For tactical aircraft the committee recommendation includes funds for about $5.4 billion to buy 507 tactical aircraft. This equates to 83 for Army, 94 for the Navy and Marine Corps, and 330 for the Air Force.

For tactical missiles the committee recommends about $1.0 billion for about 28,000 missiles for all the services, ranging from the nonnuclear Lance, Hawk, and Stinger for Army; Sparrow, Sidewinder, Phoenix, Harpoon, and Tow for Navy; Sparrow, Sidewinder, Shrike, and Maverick for Air Force; and Hawk, Dragon, and TOW for the Marine Corps. The largest single recommendation, for about 14,000 Dragon missiles, is for the Marine Corps.

In addition, the bill contains recommendations for funding many other tactical programs that are necessary to support our general purpose forces.

Mr. President, I would now like to discuss some of the major recommendations that received the unanimous approval of the committee.

The committee recommendation in the bill adds $75 million to the Army's advanced attack helicopter program for a total of $175 million. Some Members of the Senate may remember that I was initially opposed to this weapon system concept because I had doubts about helicopter survivability. However, I have been with this program since its inception and have watched the Army build in survivability features that were not possible in previous aircraft. In addition, the Army has developed tactics using nap of the Earth techniques, and they will use the Hellfire missile on the advanced attack helicopter. This weapon, when working with a laser designator from another source, will give the AAH a real fire and forget capability, thereby greatly enhancing its survivability.

I am disturbed that Secretary Brown indicated in his statements to us earlier this year that he wanted to slow this program down so that he could review further its survivability and effectiveness. I am convinced there is adequate data now on hand, including a special test conducted in Europe, that shows the AAH is a survivable and effective system. Mr. President, the AAH is an urgently needed system for our Army forces. The committee also believes this since it voted to continue the program at its previously planned rate.

The committee also added funds for 12 A–7E's for the Navy's light attack force. This action was taken because the Secretary of Defense, in cancelling further buys of the A–7E during the fiscal year 1978 internal Pentagon budget process, thereby insured the Navy would incur a shortfall of 36 A–7E's by the time the F–18 was scheduled into the inventory.

The bill also contains about $626 million for continued development of the F–18 program, but one only has to read the recent trade journals to know that program is a prime candidate to be cancelled in order to accommodate to Secretary Brown's notice to the services that future defense budgets are going to be reduced. Therefore, we believe it is very prudent to insure that the only light attack aircraft production line in the United States continues in operation and that, in a time of increasing Soviet conventional forces, we do not deliberately create a shortage in our own forces.

The committee also recommends that a request by the Army for an interim scout program be denied. Instead, we direct that these funds go toward the development of an advanced scout helicopter, which we feel is going to be an essential partner for the advanced attack helicopter.

Mr. President, there seem to be a number of people who complain about these various tactical programs because they are expensive, but if we must fight outnumbered and win, we had better spend our money on these vital systems. There is no other way we can muster the firepower necessary to meet a quantitatively superior Warsaw Pact force.

I urge the Senate to support the bill as presented.

Mr. President, finally I want to commend Charles H. Cromwell and Robert Q. Old of our professional staff who did their usual fine job in assisting with the bill.

Mr. GARN. Mr. President, I rise in support of the Senate Armed Services report and to express my congratulations to the committee and the staff for their outstanding effort in bringing this bill to the floor. I particularly appreciate the support I received on those portions of the bill that I was involved with personally, namely the Minuteman and MX program.

Because I feel they play such an important part in our total strategic forces, I intend to take a few minutes to discuss that belief.

In 1973 while at Prague, Secretary of the Communist Party Brezhnev made a statement that I never saw in the local press, but nonetheless shed considerable light on the Russian policy of "détente." ". . . we are achieving with détente what our predecessors have been unable to achieve using the mailed fist." He then went on to say:

> We have been able to accomplish more in a short time with détente than was done for years pursuing a confrontation policy with NATO . . . Trust us, comrades, for by 1985, as a consequence of what we are now achieving with détente, we will have achieved most of our objectives in Western Europe. We will have consolidated our position. We will have improved our economy. And a decisive shift in the correlation of forces will be such that, come 1985, we will be able to extend our will wherever we need to.

The cold war has heated up and many of us have not even recognized it. Since 1969 we have lost strategic superiority and may have slipped to a position of strategic inferiority. Unless we rectify this serious imbalance, we can expect the Soviets to become more adventuresome. As Senator JACKSON once stated: "The Soviets still prowl the corridors of the world looking for unlocked doors." Unless we address ourselves to this issue soon, we will not have to worry about the Soviets prowling the corridors of the world looking for unlocked doors; they will politely knock down any and every door, locked or unlocked, and we will not have the capability to do anything about it.

Our constant policy of unilateral restraint has since 1969 allowed this situation to develop. During this period we:

First. Gave up ABM without a compensating increase in civil defense.

Second. Did not develop a large throw weight ICBM to match the increase in the Soviet target complex.

Third. Did not provide for a new, more survivable basing mode for Minuteman or some new ICBM.

Fourth. Limited the deployment of MIRV to half the ICBM force.

Fifth. Did not provide higher accuracy, higher yield options for the SLBM force.

Sixth. Did not initiate full scale development of cruise missile for our bomber force.

Seventh. Approached shutdown of the Minuteman production line.

Eighth. Have not moved ahead with the new MX ICBM system.

The United States has tried to live by the intent and spirit of SALT. The Soviets, on the other hand, initiated crash programs to implement most of the items listed above—all done within the letter of SALT I and negotiations for SALT II—but certainly not in the spirit of the talks.

The Soviets are now engaged in massive development and production of a number of ICBM's, SLBM's, and bombers, have an accelerated effort on civil defense, as well as outspending the United States nearly 2 to 1 in the critical area of research and development. In terms of strategic capability we have fallen behind the Soviets and they now have the development and production momentum while we do not. The relative capability we have given up in the last 7 years will take us at least 5 to 10 years to recover and regain with the Soviets; provided we initiate action now—but there is no evidence at present that we have the will to meet this challenge.

A recent example of what we can expect from the Soviets is their rejection of President Carter's very generous SALT proposal he submitted to them in March. I believe this is just one indicator of what we can expect in the future. It will be impossible to get any equitable treaty if they can perceive they have strategic superiority. If we are to be successful at SALT, and we all want to be, then we must address the issue of strengthening our hand at SALT, and the best way

to do that in my opinion is to rectify the strategic imbalance that presently exists. The committee recommendations in the area of strategic forces is a good start in that direction.

The area I am most concerned about is the land-based ICBM's—Minuteman/MX. The land-based missile force contributions to the Triad are very impressive; first, the Minuteman is the only element of the Triad with the capability of meeting all the strategic force mission requirements. This is possible because of its quick response time, range, accuracy and payload. Further, it has the most efficient constant, two-way command and control system.

At least 95 percent of the Minuteman force is on operational alert at any time, compared to 30 percent for bombers and 53 percent for SLBM's. It contains approximately 68 percent of the total delivery vehicles on alert and carries 57 percent of the available strategic payload on alert. The operation and maintenance costs are significantly lower than either of the others and its deployed completely within the sovereign territory of the United States. Senator HOWARD CANNON last year's debate succinctly stated in more detail the role Minuteman plays in during last year's debate succinctly stated in more detail the role Minuteman plays in our strategic forces.

I ask unanimous consent to have printed in the RECORD an excerpt from the CONGRESSIONAL RECORD dated May 26, 1976, at page 15639.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Mr. CANNON. Mr. President, I rise to speak in favor of continued production and deployment of the Minuteman III missile. By way of preamble, it might be well to review some of the characteristics of Minuteman, and the contribution of the strategic missile to the defense of the United States.

Minuteman II and Minuteman III missiles form a unique element of the U.S. strategic deterrent force—the Triad of bombers, sea-launched ballistic missiles, and land-launched intercontinental ballistic missiles.

Minuteman missiles maintain the highest continuous day-to-day alert rate of the Triad elements. Normally, almost all of our Minuteman missiles are ready for immediate launch, regardless of the state of warning. This high availability rate combines with low day-to-day operating costs to make the ICBM the least expensive weapon in our strategic arsenal.

Dispersal and hardening of the ICBM launch facilities means that each missile is a separate target for the enemy. Hence, in order to attack the 1,000 Minuteman missiles the Soviet Union must commit a large portion of its resources to their destruction—resources which otherwise could be used against other military targets, our cities, and our industry. However, in order to attack Minuteman, the Soviet Union must attack the sovereign territory of the United States, thus inviting immediate retaliation. This expectancy of retaliation contributes directly to deterrence.

Responsiveness to command and control, rapid retargeting, quick launch time, short time of flight, high ability to penetrate to the target, and lethal accuracy, make Minuteman a very capable and flexible weapon system. The receipt of Presidential launch orders can be acknowledged instantly by reliable means and, upon execution of the orders, the launch results and the status of the remaining forces can be reported promptly. It is these characteristics that make Minuteman—particularly Minuteman III—a uniquely effective military weapon, commanding the respect of any potential enemy.

Minuteman remains highly survivable and able to withstand a Soviet first strike and then retaliate quickly and effectively. Moreover, the survivability of the elements of the Triad, including Minuteman, is further reinforced by the synergistic benefits of mutual reinforcement. Any attack directed at our bomber force will provide warning sufficient to launch our ICBM's prior to being attacked and conversely any attack directed at our ICBM's provides sufficient warning to launch our bombers under positive control.

Thus, the Minuteman ICBM force, because of its unique characteristics, contributes today and will continue in the future, to contribute to the strategic deterrent posture of the United States.

A review of the strategic situation last year resulted in a tentative decision to close the Minuteman III production line. At the same time it was understood that, depending upon the outcome of ongoing arms limitation negotiations and our continuing assessment of Soviet ICBM programs, the option would be retained to make further improvements in the U.S. ICBM posture by continuing Minuteman III production.

Since that time, it has become clear that the Soviets have not matched our restraint. They have continued a program of strategic force improvement and modernization that apparently is aimed at achieving superiority over the United States. Soviet international adventurism has increased, and they have boldly pursued foreign military intervention with their own forces and through client states.

The SALT II negotiations have not been concluded and the Soviets continue to deploy new MIRV strategic missiles. Since it is the only U.S. strategic system currently in production, preparation for continued Minuteman III deployment can provide leverage in the negotiations. The Trident I missile is not expected until fiscal year 1979, and the B-1 bomber until 1981.

There is room within the 1,320 Vladivostok MIRV ceiling for continued deployment of Minuteman III now. Should Minuteman III's be increased from the present level of 550 to 700, readjustment between land-launched and sea-launched MIRV's would not occur before the early 1980's, depending upon the rate at which Trident joins the fleet, and perhaps not at all, depending upon the service life of the Poseidon missile and also the outcome of SALT talks. We should remember that under the Vladivostok understandings, the decision as to proper division of 1,320 MIRV's between land- and sea-launched systems remains a national prerogative.

Additional Minuteman III production at this time provides a modest and measured increase in strategic capability aimed at persuading the Soviets to restrain their offensive initiatives. In addition, Minuteman III missiles offer the potential for cost-effective incremental increases in military capability through accuracy and yield improvements, thereby providing continued flexibility in the face of any further Soviet initiative during this decade.

It would also be prudent to retain the Minuteman production line as a hedge against any delay in the Trident I missile program. Our early experience with ballistic missiles should serve as a warning of the delays inherent in new programs. Continued Minuteman III production and deployment would close this gap should it develop.

U.S. options for new ICBM programs depend upon a skilled industrial base. Cancellation of Minuteman production is estimated to result in the termination of 40,000 jobs, and will force many large and small contractors out of the ICBM business. Not only will this make any future reconstitution of Minuteman production inordinarily expensive, but the dissipation of produtcion skills and techniques would slow the Nation's ability to begin production of follow-on ICBM systems.

Based on these factors, I believe that it is reasonable, that it is prudent, and that it is imperative, that we make this investment at this time in our future security.

Mr. GARN. At present the United States has 550 Minuteman III's and 450 Minuteman II's. In anticipation of reaching an agreement on the Vladivostok accords the Pentagon opted to stop deployment of Minuteman II's at the 550 level. The 550 ICBM MIRV's coupled with the planned 656 SLBM MIRV's would keep us well within the proposed 11,320 MIRV level discussed at Vladivostok. For fear that this unilateral action could jeopardize future SALT discussions, I have in the past advocated we keep the Minuteman III production line open and deploy an additional 150 missiles—this, in hopes would encourage the Soviets to come to an early agreement on MIRV's. However, we have not reached the point where it does not make much sense to continue to produce Minuteman III, as it appears there is no further hope of their being deployed. For that reason, I have recommended we continue to produce those components that would be necessary for upgrading the aging Minuteman II's. The most expeditious and least expensive plan would be to use the existing Minuteman III booster—first, second, and third stages—the NS 20 guidance set and a single reentry vehicle. However, there is still some concern that this approach is not compatible with proposed SALT language. Therefore, I am amiable to doing what is necessary to resolve this issue, be it using a truncated third stage or going to a two-stage missile. The important thing is that we recognize that the Minuteman II force will likely be in the inventory through the 1980's. It is our responsibility to ensure that we maintain the force effectiveness at its highest in the most cost effective means possible. For that reason, I feel it would be ludicrous to the extreme to allow the Minuteman production line to close down and then attempt to reopen it in say 1 or 2 years at a substantial cost. In fiscal year 1977 we authorized $225.5 million for procurement of 60 Minuteman III missiles. Approximately $70 million has already been expended. By changing the existing language and encouraging the Air Force to make a decision on this issue, the more likely we are of having funds to continue producing those crucial items through fiscal year 1978 as well as starting R. & D. programs on any new items required. A timely decision will also allow an earlier deployment date. I am pleased to say the committee adopted this proposal, and inserted language recommending DOD make a timely decision on this proposal. This proposal would significantly improve the capability of the Minuteman force, especially when

coupled with the ongoing silo upgrade program. Modernization of the Minuteman II's would:

First, replace aging components;

Second, increase hardness and survivability;

Third, improve guidance; and

Fourth, extend the expected life.

Since 1970 we have been studying alternate modes for a new land-based system and we still have not selected a concept. As a matter of fact that was the reason given by Secretary of Defense Brown for cutting the MX funding proposed by the Ford administration from $294 million to $134 million. At the very earliest, assuming congressional support, MX would not be operational until 1985. There are now indications that it may even slide to 1986 or beyond. I am afraid our record for getting new systems deployed is not the most impressive, so I am very concerned about a 1986 IOC.

Therefore, the best option available for maintaining a strong deterrent force and achieving meaningful SALT agreements appears to me to be improving our strategic forces—namely, a solid commitment to MX, B–1, and Trident.

Mr. STENNIS. Mr. President, the Senator from New Hampshire (Mr. McINTYRE) has served for 8 years as chairman of the Research and Development Subcommittee, and he and the other subcommittee members are very valuable in their service. I express the special thanks and commendation of the chairman and other members of the committee for the very fine work that he and the other subcommittee members have done.

Senator McINTYRE is unable to be here today. He has prepared special remarks with reference to the work of the Research and Development Subcommittee of our full committee. I ask unanimous consent that his remarks be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR McINTYRE

As Chairman of the Subcommittee on Research and Development, I would like to speak in support of HR 5970, the Military Procurement Authorization Bill for fiscal year 1978. In my judgment the bill before you is a responsible bill that will provide for the defense of our country, but will do so with a minimum of waste.

The Department of Defense request for research and development funds for fiscal year 1978 is $11.7 billion, an increase of $1.2 billion or about 12 percent over that appropriated last year. The bill before you recommends an authorization of $11.4 billion for research and development, a decrease of $257 million from the request. This amount provides for an increase of slightly over 9 percent. Allowing for inflation it would result in a real increase of about 3 percent.

I have been chairman of the Subcommittee on Research and Development for eight years and I have listened to and participated in the debates regarding our national security even longer than that. The constant concern is how to sustain and strengthen the technological leadership that has long been the cornerstone of our military capability.

Throughout the hearings conducted by our Subcommittee this year, we have tried very hard to determine the status of the balance of technology between the United States and the Soviet Union. The answer to that question is very elusive but I would make several observations that I believe are relevant.

The first point I would make on the condition of the technological balance is that it is a balance unlike that which we are used to defining in a military sense. That is, we cannot count aircraft, or missiles, or tanks and arrive at some quantitative comparison. In the area of technology development, one brilliant idea effectively executed can tip the balance despite thousands of mediocre ideas moving along at plodding speeds. We must look beyond an accounting of how much we spend for research and development to determine whether we indeed will maintain our technological lead.

A second concern is the fact that the Soviet Union is not a newcomer to the world of high technology and indeed has an illustrious history in the basic sciences. As was pointed out to us by an expert on high energy lasers from the Department of Defense, the Russians shared the Nobel Prize for the discovery of the laser. This expert testified further that when he was working in the laboratory and wanted to study the effects of lasers on materials, he found the Russian writings on that subject to be the best available.

I point this out not to panic anybody but to place in perspective the fact that our adversary has a long history of excellence in the basic sciences. His limitations are the social and economic systems which convert science to useful products; including operational weapons systems. This is the strength of our system and we must ensure that our research and development is managed so as to retain this advantage.

There are trends in the management of defense research and development which are very disturbing to the Committee and which I think impede the effective use of the monies authorized and appropriated by the Congress. The challenge to the new management in the Pentagon is to find ways to use more effectively the funds provided by the Congress. My intention is not to cast doubts on the performance of previous administrations. What I am saying is that the change in administration provides an opportunity to review our practices and management techniques and to keep that which has been useful and to discard that which is not. I am concerned that various management practices that have been employed in the past have slowed the flow of technology from the laboratory to the battlefield to a snail's pace. Why does it take us 10 years to develop a new sonobuoy? Fifteen to twenty years to develop an amphibious assault vehicle? Eighteen years to develop new air defense systems? There are many more examples, but these are adequate to make it clear that in our rapidly changing world, we cannot afford to continue these practices.

The first practice is the seeming inability of the Department of Defense to set priorities. There are indications that the Department tries to keep twice as many projects alive as can reasonably be funded at a full level of effort. The result is that many programs crawl along at such a slow rate that they are obsolete well before they are deployed to the forces. No one realizes the pressures to keep favored programs alive more than the Chairman of the Research and Development Subcommittee. But I am convinced we must have the courage to make choices, to set priorities to accomplish the most important things and do so in a timely manner.

The second practice which is of concern to the Committee is the tendency of the Department of Defense research community to become more ingrown, relying more and more on their own laboratories and less and less on the work of our universities and private companies. Between 1965 and 1975, the funds for research remained nearly constant, but the effect of inflation was to cut the real effort by half. Nearly all of the reduction was taken in funds going to private companies and universities. The Department of Defense laboratory funding remains essentially level. We must return to greater reliance on our private sector. I made the point earlier that the Russian people have a rich history of scientific accomplishment as do we. The difference has been the effectiveness of our private enterprise system that has allowed us to exploit our scientific accomplishment to the advantage of both our military and private sectors.

A third issue of concern is the ponderous nature of the Department of Defense review process. I am concerned that this process has become so frightening and so all-encompassing that the concept of individual and personal responsibility is lost. I challenge any serious student to pinpoint who is responsible for the overruns in any one of dozens of programs. My point in raising this is not to try to affix blame; my point is to illustrate that the review-approval management structure is so layered and complex that it must be viewed as an impediment to crisp, effective, decision-making.

Let me review the major features of the research and development portion of this bill.

The bill provides for an 11-percent increase in funds for the research and exploratory development programs known collectively as the technology base. These programs seek to expand our basic knowledge and apply it to military problems and concerns. They are our investment in our future technical leadership.

Funds for research and development for general purpose forces increases from $3.6 billion in fiscal year 1977 to $4.2 billion in fiscal year 1978, an increase of 16 percent. The weapons now in full scale development will provide for modernization of our forces at an unprecedented rate. Even a partial list gives a feeling for the magnitude of our efforts.

For the Army:
XM–1 Main Battle Tank;
Mechanized Infantry Combat Vehicle;
Patriot Air Defense System;
Roland Air Defense System;
Stinger Air Defense Missile;
General Support Rocket System; and
Copperhead Guided Projectile.

For the Navy:
Lamps ASW Helicopter;
F–18 Fighter;
CH–53E Heavy Lift Helicopter; and
Aegis Air Defense System.

For the Air Force:
F–16 Fighter;
Stretched C–141;
Rewinged C–5; and
Ground Launched Cruise Missile.

These programs, coupled with many supporting programs and improvements to existing weapons, will provide major improvements for our general purpose forces.

I call the attention of my colleagues to provisions of Section 202 of the bill. This section requires the Secretary of Defense to report annually on testing done with chemical and biological agents involving human subjects. It also requires advanced notification of plans for such experiments. I feel it is very important that the Congress increase their oversight control of this critical area.

In the area of research and development for strategic forces, the Committee recommended an authorization of $2.2 billion, a decrease of $8.1 million from the Department of Defense's request.

In addition to the full Armed Services Committee's hearing on strategic posture, the Research and Development Subcommittee held intensive hearings on specific topics such as strategic bomber weaponization, survivability of our ICBMs, etc. These hearings resulted in Committee report language sup-

plementing recommended changes in the dollar amounts requested by the Department of Defense.

The Committee has recommended full funding of the requested amounts for several programs, but, anticipating major decisions regarding these programs in next year's authorization request, the Committee's report contains language requesting the Department of Defense to conduct internal reviews on these programs to ensure that the Committee and the Senate has sufficient information to make these difficult decisions next year. The programs involved are: weaponization of our strategic bomber force; planned upgrade of Minuteman II missiles; development of the Trident II and MX missiles; MARV developments and the MK-12A Advanced Ballistic Reentry Vehicle.

All the Committee asks in each of these cases is that the Defense Department concentrate its attention over the next year on a set of comprehensive and integrated studies to give us a better basis to make decisions which we anticipate next year.

The first program for which an internal review has been requested is weaponization of our future bomber force. In recent years, the debate on modernization of the strategic bomber force has focused on what kind and how many new bombers will be needed. In my view, insufficient attention has been paid to how the bombers should be weaponized. A number of weapons are being developed: two modifications of the SRAM, two of the Air Launched Cruise Missile and the Advanced Strategic Air Launched Missile absent an integrated plan of what mix of weapons is desirable, how the developments should be paced, what characteristics the weapons should possess, and what inventory will be required.

The Committee's report requests that the Department of Defense submit a study with next year's authorization request embracing this criteria, and defining an integrated bomber weapons development plan by which the Senate can judge the Department's future requests.

The Department is also asked to conduct an internal review of alternative approaches to upgrading our Minuteman II missiles. While there are no funds requested for Minuteman II in fiscal year 1978, next year's authorization bill is expected to include $23 million to begin a Minuteman II upgrade program which is currently estimated to involved development costs in the area $500 million. There are differing judgments as to whether and how the Minuteman II force should be upgraded. Some of these differences revolve around what possible effects SALT limitations might have on our MIRVed missiles. The Committee's report language ensures that the Department will have defined alternative approaches to the planned Minuteman II upgrade and will report these with next year's budget request.

The Trident II program is another program for which a relatively small level of funding is requested this year, but the Committee is aware that over the next five years development funds of approximately $2.8 billion over five years will be requested. Beyond that, the development cycle would not be complete for another four years. Looking toward these projected increased funding requests in the future, the bill includes authorization of $5 million requested for FY 78 to initiate tradeoff studies for the Trident II as a necessary preliminary effort. The Committee's report requests that the Department of Defense undertake a major review of our future sea-based weapons requirements, including an examination of whether potential threats to our currently projected sea-based deterrent require additional range, payload, or weapons improvements to maintain the survivability and required levels of effectiveness for our SLBMs. This language maintains the Committee's emphasis on maintaining a survivable and effective sea-based nuclear deterrent.

The Committee's report also includes report language relating to three developments in our land-based ICBM force.

First, regarding the M-X program, this year's request for continued advanced development of the M-X missile is consistent with the Committee's recommendation last year that the program not move from advanced development to full engineering development until the Department resolved contradictions in its position on future ICBM capabilities and demonstrated a clear need for a particular mobile basing alternative. The Committee's report reiterates the Committee's continued support for the TRIAD and explains its support for continued development of the M-X missile as a hedge against future ICBM vulnerabilities. The Committee also looks toward receiving the comprehensive review of the future of ICBMs in our strategic forces and the President's certification that the report represents national policy requested last year.

Second, the Committee is asking the Department of Defense to conduct a rigorous comparative review of the Navy's MARV EVADER and Air Force's Advanced MARV developments. Both these developments to our reentry vehicles have been justified as counters to potential Soviet ABM systems. Due to advances in the EVADER program, the differences between the two programs narrowed to the point where there may be no differences in practical effectiveness against Soviet AMBs. Thus, the Department is requested to see if both MARV developments are required or whether one could be modified to fulfill all requirements.

Third, as with the MARV EVADER and the AMARV programs, the differential between the MARK 12-A and ABRV programs has narrowed to the point where the Committee is recommending that the Department of Defense conduct a rigorous comparison of the two programs. The review should tell the Senate whether the MARK 12-A could meet these requirements as designed or if modified or whether continued development of both programs is justified.

I also call my colleagues' attention to the Committee's continued efforts to ensure that individual cruise missile applications should be paced by specific missile requirements rather than by technology.

I think the Committee and the Senate should be proud of their efforts in recent years to bring this kind of reasoning to bear on cruise missile programs. For example, it was Congress' insistence that the cruise missile be put on our strategic bombers against some important opposition in the Department of Defense. Moreover, it was at Congress' insistence that the Department refocused its application of the so-called "land attack" TOMAHAWK on theatre missions rather than the SIOP applications which absorbed so much of the Department's attention.

In fact, the relative clarity of the Department's current explanations of its various cruise missile developments reflects, in my judgment, the leadership of Congress in insisting on *discriminate* military judgments about cruise missile applications rather than developing certain cruise missiles simply because it can be technically done.

The Committee's report continues this leadership in the area of cruise missile technology by asking the Department of Defense to intensify its investigations of effective non-nuclear arming of cruise missiles which would be used against land targets in the theatre. Such a development could significantly raise the nuclear threshold.

Further, the Committee is recommending programmatic direction to the Air Launched Cruise Missile program which will protect the accelerated initial operating capability of 18 months with ALCM-A, rather than with ALCM-B while fully meeting Strategic Air Command operation requirements.

As a result of the Committee's review of Navy's ELF communications system (Seafarer), the Committee recommends support for $21.1 million of the $23.7 million request for this system, and denial of authority and the $3.6 million requested for full scale development. While the Committee continues to support the development of a communications system which will further ensure the survivability of our sea-based deterrent, full-scale development could not be approved absent positive resolution of the environmental considerations and accommodation of reservations about candidate sites. The Committee is urging the Department of Defense to develop a compromise involving a reassessment of its requirements for transmission rates and a smaller antenna requiring less land.

The Committee's report describes the many other important recommendations made by the Committee in the area of research and development. I have merely tried to highlight some specifics of interest to my colleagues in the Senate. I would also like to take this opportunity to commend the efforts of the membership of the Research and Development Subcommittee, who unanimously supported the recommendations of the Subcommittee to the full Armed Services Committee. On the majority side, we have the junior Senator from Iowa (Mr. Culver), who again led the Subcommittee's review of tank and tank armament programs, along with the ranking minority member, the junior Senator from Oklahoma (Mr. Bartlett). In addition, the junior Senator from Arkansas (Mr. Bumpers) has joined the Subcommittee this year. Of course, the distinguished senior Senator from Arizona (Mr. Goldwater) continues to serve on the Subcommittee as he has for many years.

It is also a credit to the R&D Subcommittee members and the excellent staff that they were able to so competently review the many programs in research and development within the limited period of time available.

In closing, I submit that the funds recommended for authorization and the programmatic direction recommended by the Committee in the field of research and development are consistent with the need for a strong military technology effort by the United States. Coupled with sound and effective management practices within the Department of Defense, I am confident that these recommendations will continue our strong R&D program, and move new technology from the laboratory to the battlefield.

ADDITIONAL STATEMENTS SUBMITTED ON H.R. 5970

Mr. BAYH. Mr. President, the Senate Armed Services Committee has reported a bill to provide some $35.89 billion for new military procurement, research, and authorization. My understanding of the total budget impact of this bill is that it will not lead to military spending this year which will exceed the budget target of the first concurrent budget resolution of $118.5 billion. The amended budget request of the administration for fiscal year 1978 shows a total requested budget authority of $117.7 billion. Although the committee has made some important changes in the administration's request, especially in the area of shipbuilding, recent data indicates that we will not be spending up to budget authority. In fact, based on recent OMB estimates for the current fiscal year, actual outlays will be close to $10 billion below actual spending authority. I hope that this

trend will remain true for the fiscal year 1978 budget. At this point, I would like to associate myself with the comments of May 9 made by the distinguished senior Senator from California and our majority whip, Senator CRANSTON, when he pointed to this trend by way of emphasizing the continuing need to "boil the fat" out of the defense budget.

While I intend to support the bill before us today, there are some features of the legislation which I would not have approved if I sat on the Armed Services Committee. For instance, $78 million for the procurement of 360 nonnuclear Lance missiles seems to me the wrong way to go about strengthening our conventional capabilities in Europe. From the point of view of cost-effectiveness, aircraft sorties are preferable to firing a conventionally armed weapon at the kind of targets that would be presented by the Soviets in any invasion in Europe. I note that the administration did not request such authority. Similarly, I am hesitant to endorse the committee's action in authorizing $91.4 million for the purchase of some 24 additional A–7E light attack aircraft. Again, there was no request by the administration.

In expressing my concern about these actions, I would also offer my approval of the committee's decision not to provide funding for the purchase of the Navy's 8-inch major caliber lightweight gun. This weapon has yet to be tested satisfactorily for accuracy according to a GAO report. In December of last year, I expressed my own concern about this matter to the Department of Defense. I am gratified to see both the Senate and the administration defer funding for procurement of this weapon. I urge my colleagues who will represent us in the conference to resist funding support for the Mk 71 MCLWG.

While these items are relatively minor in their budget impact, the Senate did make a major change in the structure of the Navy's shipbuilding program by adding some $923 million. Here too, there are areas in which considerable question can be raised in particular regard to the go-ahead with the AEGIS antimissile fleet defense system and funding for the procurement of another *Nimitz*-class nuclear carrier. However, it is equally important to note that the committee has taken this action in order to present a broad set of options for future decisions concerning the design and mission of the fleet. Just as importantly, the committee's action paves the way for future favorable consideration for the procurement of VSTOL—vertical short takeoff and landing aircraft—aircraft carriers rather than purchase of large carriers which are more difficult to defind against the highly sophisticated Soviet cruise missile threat at sea. As Senator HART from Colorado, who has become an expert in the assessment of the growing Soviet naval challenge, correctly notes:

> The Soviet's problems are command and control of simultaneous missile strikes from aircraft, submarines and surface ships, and of making certain that after a missile attack no U.S. carriers remain operable to launch relatiatory strikes, against Soviet ships.

Mr. President, the reluctance of the Navy to explore more aggressively the VSTOL concept is disturbing since it does offer a means to meet the requirements of a future wartime environment at sea by taking advantage of certain technological trends favoring tactical aviation. Still, the committee has provided an environment within which the option for pursuing a VSTOL strategy is maintained.

The importance of maintaining a national defense so sufficient that it can never be successfully challenged cannot be overstated even though the world around us becomes increasingly complex and our economic, social and military-political problems ever more complicated. This task cannot confine itself to providing appropriate support to the Department of Defense alone. We must constantly remember that an expanding economy providing jobs and meeting the needs of our citizens in the areas of health care, equal opportunity for quality education and support for those who are disabled or otherwise unable to find gainful employment are critical challenges as well. Meeting these challenges while maintaining a strong defense can only enhance our overall strategic posture and guarantee the maintenance of a durable peace in a too often hostile world.

Mr. MUSKIE. Mr. President, I wish to take this opportunity to support the hardened ballistic missile defense—BMD—materials program and the dedication of a minimum of $4 million of the $107.297 million provided in the ballistic missile defense advanced technology program to hardened materials research.

The hardened ballistic missile defense materials program supports the materials technology base by developing specialized materials and technologies and by continually assessing U.S. materials capabilities and limitations. The dedication of a minimum of $4 million for this materials research in conjunction with the Army's research in materials program will assure the continuation of this vital effort.

The House Armed Services Committee included express language to that effect and the Senate has provided sufficient funds to accommodate the program. I encourage the Senate conferees to join the House in express support for this effort.

The Senate committee has also provided $18.635 million to meet the Navy's request for funding in the materials technology program. This level of funding is sufficient to accommodate a $6 million effort in the strategic missile materials technology program to develop advanced, high performance materials and design concepts for advanced strategic systems. It is crucial that this exploratory and development work be continued and I encourage the committee to provide appropriate guidance to the Navy in that regard.

Mr. MATHIAS. Mr. President, I rise today to speak in support of what I consider to be one of the most vital programs in the fiscal year 1978 military procurement authorization bill, which we now have under discussion. That is the A–10 close air support aircraft program.

The A–10 program, incorporate many of the good things which we would like to find in all of our new weapons systems: a clearly defined, extremely vital mission, that of working with the ground forces to destroy enemy armor by massive and concentrated firepower; a program so well managed that the contractor is currently a month ahead of schedule on deliveries; an aircraft system that is proving itself superior in every category from maintainability to mission effectiveness. Tests over the past few months have proven this time and time again.

Last fall, the A–10 flew a series of adverse weather tests against armored targets in the State of Washington. Ceilings were less than 1,000 feet and visibility ranged from 1 to 3 miles. Heavy rains reduced visibility even further. The A–10 proved it could operate, find, and attack targets in such weather—weather which is characteristic of Central Europe where a Warsaw Pact attack would likely occur. The GAU–8 30-mm gatling gun was especially effective when the poor weather precluded attack by more sophisticated weapons.

The A–10 has also been evaluated in the Air Force's red flag complex which is perhaps the most realistic threat and target environment range in the free world today. The evaluation showed the A–10 to be a very survivable weapons system and extremely effective in performing the close air support mission.

In February of this year, two combat configured A–10's flew 34 simulated combat sorties in 11 hours from an austere forward operating base in Arizona. Each A–10 flew 60 nautical miles to the target, dropped four 500-pound bombs, fired over 100 30-mm rounds and then returned for reloading and refueling. The A–10 surge rate was much higher than expected and the tests were stopped only because the supply of ordnance was exhausted at the forward base. Had more ordnance been prepositioned, more sorties could have been flown, but the 17 sorties per aircraft more than proved the A–10's sustained capability and set new standards of performance for close air support aircraft.

More recently, in fact the operation is still underway, the A–10 proved itself again in a massive training exercise with Army, Navy, and Marine Corps units at Bicycle Lake at Fort Irwin, Calif. The Army troops have been very satisfied with the A–10 because it is the one aircraft that stays with them and provides sustained support rather than making one fast pass and then disappearing.

All these tests prove beyond a shadow of a doubt that the A–10 is the weapon system necessary to provide the badly needed increase in antiarmor capability in Europe which the report, "NATO and the New Soviet Threat," so ably prepared by the junior Senators from Georgia and Oklahoma called for, and which just the other day was reiterated by the President after his visit to Europe.

The Air Force has testified that they are convinced the A–10 is the best close air support aircraft in the entire world and they are convinced that it will survive in its operational environment. In short, I believe the A–10 deserves the

support of each of my colleagues in the U.S. Senate.

Mr. BELLMON. Mr. President, I rise in support of the military procurement authorization bill reported by the Armed Services Committee. This bill is the foundation of our Nation's military capabilities. And hence, it is crucial to our continued national security. For this reason I would like to comment on the most important aspects of the bill.

First, Mr. President, I express my appreciation to the distinguished Senator from Mississippi for the great effort he exerted in readying this bill for the Senate's early consideration. This year the committee's work was complicated by the administration's submission in late February of major reductions to the January budget. These cuts created strong pressures to add money to the President's amended request. Senator STENNIS and his committee responded to this volatile situation with prudence and restraint. Where they felt specific cuts should be restored, this was done. At the same time, however, the overall request was scrutinized for lower priority items which could be reduced. The net result is a bill which supports the vital elements of our national security while coming in below the President's request by $0.1 billion in BA and $0.4 billion in outlays.

These reductions, Mr. President, make a contribution toward reaching the targets for the national defense function which were included in the first concurrent budget resolution passed by the Senate on May 13, 1977. The bill before us does not achieve the full reduction in the national defense function contemplated in the first concurrent resolution. It should not be expected to do so. The military procurement and research and development authorizations in this bill account for about one-third of the overall national defense function. Since these are the highest priority portions of the function, most of the reductions necessary to reach the target should come from lower priority items and from financial adjustments such as the utilization of prior-year unobligated funds. If historical reductions achieved by our Appropriations Committee are any guide, the Senate should be able to reach the targets contained in the budget resolution without cutting into defense muscle.

There is one portion of this bill which does give me serious concern, Mr. President, and that is the proposed shipbuilding program. It strikes me as extremely inappropriate to authorize advance procurement funds for another *Nimitz*-class nuclear aircraft carrier only 2 months after the Congress rescinded funds for a similar ship. In addition, this bill contains over $600 million for something called air capable destroyers. The shipbuilding section has been described as providing options for administration and congressional consideration next year. I must say that $600 million for two ships the Navy has not planned nor requested and which would require design modification appears overly generous. This is a time of tight budgets which requires a more careful weighing of spending priorities than the shipbuilding program appears to have received.

Mr. President, while the bill before us can be accommodated within the targets in the budget resolution, I am not confident that the same can be said of the House-passed military procurement authorization bill. Including the funding implications of the personnel ceilings in both bills, the House-passed bill is higher than the bill before us by $0.4 billion in both BA and outlays. Moreover, the House bill contains an unlimited authorization for payment of shipbuilding claims. This could add an additional $0.3 billion in BA and outlays which the administration requested but was not included in the shipbuilding section of the House-passed bill. Even greater costs could result if the administration took advantage of this provision to settle the remaining claims this year without the discipline normally exerted by authorization committee oversight.

Acceptance of these aspects of the House-passed bill by our conferees, Mr. President, would put a great burden on the subsequent appropriations process to achieve the reductions necessary to stay within the budget targets. An even greater danger exists, however. Pressure may develop from the House side to go outside the range and agree to a conference report above the House figures. I want to make it clear, Mr. President, that such an outcome could place an unbearable burden on the appropriations committees and would be the cause for reevaluating my expected support for the conference report.

In conclusion, I must say it is ironic that while the House Budget Committee supports low targets in the defense function, it seems to have little effect on the House military procurement bill. Thus, it falls to the Senate to exercise the discipline for both Chambers. It is a measure of the skill and responsibility of Senator STENNIS and the other members of the Armed Services Committee that they were equal to this challenge in conference last year. I am confident they will accomplish no less this year.

Mr. President, the bill before us provides for a strong national defense within the constraints and priorities set by the Congress in the first concurrent budget resolution. Senator STENNIS and the other members of his committee deserve our appreciation for this achievement. I urge my colleagues to support the bill here on the floor and to work to preserve its essentials in conference.

Mr. HOLLINGS. Mr. President, the conferees on the budget agreed last week to allow $118.5 billion in budget authority and $111 billion in outlays for national defense. This allowance amounts to a cut of $1.6 billion in budget authority and $900 million in outlays below the request of President Carter, and is below the amounts which will be authorized and appropriated in the national defense function if the military procurement bill we are debating today is accepted and fully funded.

Since, on the face of it, the budget resolution and this bill are in conflict, I think it is important to review exactly what the budget resolution implies with respect to defense.

When the first concurrent resolution on the budget was passed by the Senate, it provided $120.3 billion in budget authority and $111.6 billion in outlays for national defense—an amount sufficient to accommodate the bill now before us.

I fought against the recommended cut in defense during the House-Senate conference on the budget until it became evident that we could gain no further concessions from the House of Representatives. I agreed to the recommended amounts on one critical condition.

The critical condition is the one stipulated on the floor of the Senate last Friday by the very able chairman of the Budget Committee, Mr. MUSKIE. I quote:

> Reductions in manpower and its associated costs and in investment and readiness costs will not be used as the vehicle for accommodating the targets.

I wish to join the chairman of my committee, Mr. MUSKIE, in expressing my thanks to the Senator from Mississippi, Mr. STENNIS, who chairs the Senate Armed Services Committee, and the Senator from Arkansas, Mr. MCCLELLAN, who chairs the Appropriations Committee, for their aid and cooperation in working out this agreement. It is important because it means that no arbitrary cuts in defense programs will have to be taken as a result of the recommendation of the conferees on the budget. I wish to thank the Senator from Maine, Mr. MUSKIE, also for his efforts to resolve the deadlock with the House of Representatives over the defense budget without giving up the substance of the Senate's position on the need for a real growth in defense.

The budget resolution assumes that large financial adjustments can be made in the administration's request for defense funds, without reducing the defense program. These adjustments include a possible slowdown in foreign military sales, the transfer of unobligated funds from prior-year appropriations to finance a portion of the fiscal 1978 defense program, a lower rate of inflation than assumed in the administration's budget, and a partial absorption of the October 1977 pay raise.

While I am happy to see that the Senate's position on the substance of the defense program was preserved in the conference. I am concerned that we were forced by the House to agree to financial adjustments of this magnitude. With the exception of the pay raise absorption, which can be expected to be on the order of $300 million in budget authority and $300 million in outlays, the proposed financial adjustments are based on some highly dubious assumptions. I think most of the premised cuts are wholly unrealistic, and will not occur.

If they do not, we will be obliged to adjust the second concurrent resolution accordingly.

First let me take up the postulated slowdown in foreign military sales. The administration currently is of the opinion that there will be an increase of several billion dollars in budget authority for foreign military sales as the result of expected new orders. I informed the House conferees of this fact, but they chose to ignore it, and continued to assume that sales would decrease.

Second, the recent trends in inflation are not downward, as assumed in the budget resolution, but upward. This fact

reflects poorly not only on adequacy of the projected fiscal 1978 budget, but also on the premised availability of excess funds from prior year appropriations. Inflation in the first quarter of this year exceed an annual rate of 10 percent in the Wholesale Price Index. This is well above rates for fiscal 1977 as estimated in multi-year appropriations for procurement stretching back to fiscal 1972. Consequently these prior year funds may prove to be inadequate to cover approved purchases.

Moreover, medium-term forecasts of inflation are rising. In December 1976, Data Resources Inc. forecast an increase in the Wholesale Price Index in fiscal 1978 of 5.4 percent. In the most recent update of their forecast, issued this month, DRI now anticipates a rise of 6.9 percent in the WPI during the forthcoming fiscal year. This is an increase of 1.5 percent in the rate. Inflation allowances in the fiscal 1978 defense budget, which were built in last fall, thus may be low by more than 1 percent, or more than $500 million.

I am seriously disturbed to see the budget process muddied by dubious—if not devious—financial assumptions such as those postulated by the House Budget Committee and insisted upon by the House conferees. Therefore, I am serving notice that I will ask the Director of the Office of Management and Budget and the Secretary of Defense that I be supplied with an accounting of all actual transfers of unobligated balances, all lapsed balances of such funds, all receipts and all other historical evidence of financial adjustments in the defense budget for each of the 5 last fiscal years, through fiscal 1976. I will ask as well for their best current estimate of financial adjustments in the fiscal 1977 and fiscal 1978 defense budgets, as well as their estimates of foreign military sales activity and the adequacy of inflation allowances in the light of current trends.

Mr. PROXMIRE. Mr. President, I would like to discuss a point concerning the proposed 50-percent increase in the budget of the Defense Civil Preparedness Agency.

No one in the Government today can tell Congress how much is being spent each year for our total preparedness effort. We have asked, but there are no answers. The Joint Committee on Defense Production came up with a rough estimate of $175 million annually. Yet nobody really knows for sure. That is why I oppose additional spending for this purpose.

We should not spend any more money on disaster preparedness programs until we have solved the current problems with the organization and priorities of the Federal preparedness effort. Instead, we should move on proposals to consolidate the existing agencies in a more efficient organization. Right now, the Federal Government has three such preparedness plainning and relief agencies—FPA, DCPA, and FDAA. And there are 175 interagency committees, working groups, and task forces. Several dozen other departments and agencies have preparedness programs.

Before President Nixon reorganized the preparedness function in 1973, there was central policy direction and budget control. But not any more. No one can adequately explain why this important mission is split up among several agencies. Nor can it be explained why central budget management was stopped.

The confusion and misplaced priorities which result from this fragmentation waste taxpayers' dollars. More seriously, there are gaps in the protection of life and property in emergency and disaster situations. We must make sure that we are getting full value for every dollar spent by using each dollar for multipurpose programs for major widespread disasters of all kinds—not for duplicative programs that make a distinction between nuclear disasters and natural disasters. This fragmentation thwarts the ability of preparedness organizations to take advantage of the economies that are possible from central management of similar programs. Many of the preparations for natural disaster are the same as those for nuclear attacks. Yet, the Federal Government for the last several years has pretended that these similarities do not exist.

The distinguished Senator from Illinois and I have introduced legislation to achieve this needed consolidation. Other legislation has been offered by the Senator from Kentucky (Mr. HUDDLESTON). The Proxmire-Percy bill would restore centralized budget control over preparedness spending. It would allow us to determine whether we are spending preparedness money wisely. It would allow us to straighten out preparedness spending priorities, avoid duplication, and increase efficiency. These proposals must be addressed now, before we sink more money into the rabbit warren of the Federal preparedness organizations.

The Congress needs to move on consolidation legislation before it moves on spending issues.

SEAFARER

Mr. NELSON. Mr. President, for the past several years I have been working very closely with the distinguished chairman of the Armed Services Committee's Research and Development Subcommittee on Project Seafarer.

In preparing for consideration of H.R. 5970, the fiscal year 1978 military procurement bill, the Senator from New Hampshire (Mr. MCINTYRE) and I prepared a colloquy covering several points relating directly to this most controversial issue. I ask unanimous consent that the colloquy be printed in the RECORD.

There being no objection, the colloquy was ordered to be printed in the RECORD, as follows:

Mr. NELSON. Mr. President, I would like to ask the distinguished Chairman of the Senate Armed Services Committee's Research and Development Subcommittee (Mr. McIntyre) a few questions regarding the authorization for Project Seafarer contained in H.R. 5970, the Fiscal Year 1978 authorization military procurement, research and development, etc.

It is my understanding that this bill contains authorization of $20.1 million for further testing and evaluation of the system. The $3.6 million requested by the Navy to initiate Full Scale Development has been denied by the Committee. Is this correct?

Mr. MCINTYRE. The Senator is correct.

Mr. NELSON. Last year's conference report on H.R. 12438, the Fiscal Year 1977 military authorization bill, contained very specific criteria governing the sequence of events that must be followed by the Navy before the Congress will authorize Full Scale Development funding. The conference Committee's report stated that Full Scale Development authorization was "contingent upon: (1) completion of studies of the environmental and biomedical impacts of the Seafarer system and the conclusion that the system poses no unacceptable environmental or biomedical hazards; (2) selection by the Navy of a candidate site; and (3) a firm plan including a schedule to begin installation of the system at the selected site."

Am I correct in assuming that when the Committee voted to delete the requested funding for Full Scale Development it was simply underscoring and re-emphasizing this procedure?

Mr. MCINTYRE. The Senator from Wisconsin is quite correct. The Committee's position on that central point this year is identical to its reasoning last year.

Mr. NELSON. In other words, the Committee will continue to deny all requests from the Navy for Full Scale Development until: (1) the National Academy of Sciences submits its final biomedical and environmental report, (2) the final environmental impact statement for the system is filed with the President's Council on Environmental Quality, (3) the Navy has chosen a specific site for the system, and (4) the Navy has provided the Congress with a detailed development plan for the candidate location. Is this scenario correct?

Mr. MCINTYRE. Yes, the Senator has accurately described the approach the Committee will continue to take in reviewing Project Seafarer.

Mr. NELSON. Just one more point. As the Senator knows, the Senator from Wisconsin has been active in monitoring this program—the Sanguine-Seafarer program—over the past eight or nine years. I have always approached the problems posed by this technology within the context of three basic questions: (1) Does the system work? (2) Is it safe? That is, does it pose any adverse biomedical or environmental hazards? and (3) Is it vital to the Nation's defense?

On the first point, the Navy appears satisfied that the system does work. Second, regarding any biomedical or environmental impacts, the evidence is not yet in—the environmental impact statement process is incomplete and the final National Academy of Sciences report is not yet available. Finally, in regard to the need for Project Seafarer, as to its relationship to national security, this issue, in my view, has not been adequately debated. I note in the Committee report on pages 93–94 that (Report No. 95–129) it is the Committee position that an extremely low frequency communication system, either Seafarer or something very close to Seafarer, is indeed vital to the Nation's security. Would the Chairman like to comment on this point?

Mr. MCINTYRE. The Nation's security is involved in two ways. First, the effectiveness and stability of our nuclear deterrent depends on the certain survivability of our strategic submarines. We have the very highest confidence in their current survivability. However, our strategic submarines now must use buoys or wires to receive messages so, over a long period, it is conceivable that patterns of operation could be deduced if the Soviets acquire the ability to detect and monitor our submarines through this one indicator. A buried ELF communication sys-

tem would enhance the survivability of our strategic submarines by enabling them to operate at more survivable depths and without such buoys or wires.

An ELF communications system would also be important for the effective operation of our attack submarines. By far, the most formidable element of the Soviet Navy is their attack submarines and our best military counter to this threat is our own SSNs. An ELF system would permit substantive messages to be transmitted to our SSNs while they are engaged in an actual military operation and while they are operating at effective speeds. Without an ELF system, our attack submarines might have to disengage from their tactical situation, reduce their speed and come near to the surface in order to receive a critical message so the result would be the sacrifice of the military effectiveness of our SSNs.

The ELF system is, therefore, critical both to the survivability of our sea-based deterrent and to continued effectiveness of our attack submarines. These are the primary reasons why the Senate Armed Services Committee has insisted, over the years, that this technology be pursued.

We have also worked hard to find ways this very important capability can be acquired without risks to human well-being or any significant adverse impact on the environment. We also hope that a smaller system could be defined that would use much less land and thereby accommodate the feelings of the local population where an ELF system might be located.

Mr. NELSON. I thank the Chairman.

Mr. NELSON. I want to congratulate the committee for approaching this complicated and very emotional issue in this careful manner. It seems to me that everything that needs to be done is, in fact, being done to insure that the environmental, biomedical, and national security issues are fairly evaluated before the Congress makes a decision whether or not to proceed to full scale development. This decision will have to await all of the final reports we have just discussed.

Mr. President, I ask unanimous consent that a statement I made on this issue April 6, 1977, and additional material be printed in the RECORD.

There being no objection, the statement and attachment were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GAYLORD NELSON

Mr. Chairman, I appreciate the opportunity to share my views on the Fiscal Year 1978 Budget for the Navy's Project Seafarer with this Committee.

Before getting into the substance of this year's request, I want to commend the distinguished Chairman of the Research and Development Subcommittee (Mr. McIntyre) on the analytical and systematic approach adopted by the Committee in reviewing the advantages and problems of this extremely low frequency communication system. The process and criteria established by the Committee last year for the evaluation of Project Seafarer has worked well and should, in my view, be continued.

As you know, the Navy has requested $23,741 million for continued work on Project Seafarer during Fiscal Year 1978. Of this total, the Navy has asked for authorization to spend $3.6 million on Full Scale Development (FSD). Full Scale Development is the stage of program development immediately preceding system deployment. It involves selection of a system site and preparation of the site for construction of the actual antenna and communication network.

Last year, the Congress took an important step toward resolving the many technical questions that surround this communication grid. Senate Report 94-1004, the Conference Committee Report accompanying H.R. 12438, the bill authorizing appropriations for Fiscal Year 1977 for military procurement, contains, for the first time, a specific timetable and exact criteria governing future consideration by the Congress of Project Seafarer.

The Conference Committee Report provides that Full Scale Development funding is "contingent upon: (1) completion of studies of the environmental and biological impacts of the Seafarer system and the conclusion that the system poses no unacceptable environmental or biological hazards; (2) selection by the Navy of a candidate site; and (3) a firm plan including a schedule to begin installation of the system at the selected site."

In other words, the Congress agreed that Full Scale Development funding should be withheld until: (1) the final report of the National Academy of Sciences with regard to biomedical and environmental impacts was filed with the Congress, (2) the Navy had picked a specific site for project installation, (3) a site development plan was submitted to the Congress, and (4) the final Environmental Impact Statement was filed with the President's Council on Environmental Quality.

As of this date, the Navy has failed to make any of this information available to the Congress. They have failed to provide any of this documentation because it is not yet complete. Not one of these reports has been finished. The Congress must have this critically important data before authorizing Full Scale Development.

Therefore, according to the procedure laid down by this Committee and the Congress last year, I respectfully recommend that the $3.6 million slated for Full Scale Development be deleted from the requested authorization.

Last week the House Armed Services Committee voted to delete all funding for Project Seafarer from the FY '78 Budget. This action, in effect, kills the 18-year-old program. The Committee did, however, vote to authorize $2 million to upgrade the Wisconsin Test Facility as an operational test bed and $5 million for research and development of a blue-green laser communication system.

The House Commitee has decided that Project Seafarer is not vital to this nation's defense. Two points are now before this Subcommittee for resolution: (1) the Navy's $23.7 million FY '78 request and a repeated determination that Project Seafarer is necessary to the country's defense, and (2) the decision by the companion House Committee to kill this particular ELF effort. I do not have an opinion on the second point because the merits of the case have not been thoroughly argued in the Senate in open debate. Because of the House Armed Services Committee's action to delete all authorization for continued work on Project Seafarer, it seems to me that this Committee will have to decide and make a recommendation to the Senate whether or not this particular Project or some other communication system is vital to the defense of this nation.

There should be no question about the Full Scale Development funds; the Senate should deny the Navy the requested $3.6 million. The door of decision has been flung wide open by the House; we must now scrutinize this program and decide the fate of the Project Seafarer.

Mr. Chairman, I have a short list of questions that I would appreciate if the Committee would submit to the Navy so their responses can be printed in the record.

STATEMENT BY SENATOR GAYLORD NELSON

Senator NELSON. Thank you, Mr. Chairman.

I am addressing myself to the narrow question at the moment of timely necessity of the request of the $4.65 million for full scale development.

I have been involved in the project for 8 years since it was first announced. And I must say, Mr. Chairman, that over that period of time I have had the privilege of meeting with representatives of the Navy on a regular basis, sometimes once, and sometimes twice, and sometimes three times a year. The Navy has been most cooperative in sending over their experts and discussing in great detail the proposal and what the objective was. And I am very appreciative of it.

When the proposal was first announced it contemplated a system that involved 25,000 square miles. It is my understanding that it is now more sophisticated, to encompass about 3,500 square miles. And I immediately raise the question of environmental impact, because in that kind of area you would be crossing hundreds of streams and marshes, and you would be in clay country.

After these objections were raised the Navy immediately announced a study by the Hazlitt Corp. for approximately $125,000. We discussed that proposal at some length. We found that it would require substantially more funding. Consequently the Navy has proceeded to request and engage in extensive environmental studies contracted out to a number of universities and other scientific personnel.

From the beginning it has been my posture and my understanding, an understanding that has been repeatedly confirmed by conversations with representatives of the Navy, including Admiral Kaufman, with whom I met several times, including statements in the committee reports on several different occasions, and including a detailed exchange of letters with the Navy in 1972, that there were three aspects of the problem involved here. I put them in a different order for the 8 years the Navy has on this presentation:

One, the validation phase and the question of whether it would in fact as a practical matter work. It appears clear it will.

That validation phase was carried on at Clam Lake in the Chequamegon National Forest.

The second question raised was the question of environmental implications of the installation of the system. His question has been, as I said, studied very extensively.

Third is the question of whether or not this communications system is a vital part of our weapons system, is it vital to the defense of the United States, is it vital to assure the credibility of our capacity to respond?

That was the third issue to be considered as we discussed it at least over the past 8 years.

I have always taken the position that I was in no position, based upon what I knew thus far, to make any independent judgment as to whether or not it was vital to our defense. However, if it were vital to our defense, I don't think there would be any objection basically in this country, because it is necessary to have it. That question for debate has not been brought up in Congress thus far. Of course the Navy has long ago concluded that if it will work and if the environmental impact is not consequential, that in fact it is vital to the defense.

In a series of committee comments and reports it has been well understood and agreed that there would be no request for full-scale development or deployment, both words used interchangeably, for several years until the testimony today, until the first two questions have been settled, the validation question, and second, the environmental studies completed and evaluated by the scientific community. That second step has not yet been completed. We have repeatedly discussed this with the Navy. The record, is replete with comments. In fact, in an exchange of letters with the Assistant Secretary of the Navy, this was June 19, 1972, I said in my letter to the Navy, and they in return:

"In summary, it is my understanding in my discussions with the Navy that the fiscal

year 1973 appropriations which the Congress is asked to act involve only continuation of research and development (validation phase) and do not include any funds for the final development and deployment phases. I would appreciate being advised if my interpretations of these conferences do in fact represent a correct view of the status of Project Sanguine and the purpose of the funds requested for fiscal year 1973."

In response Assistant Secretary of the Navy Robert Frosca states in one paragraph:

"Approval of these funds and the conduct of the validation phase, do not constitute a commitment to full-scale development of production of a Sanguine system. Development needs to proceed in order to insure that future decisions on full-scale development are based on availability of all necessary factors, including environmental issues."

In several other places—and I will submit all of it for the record, Mr. Chairman—this posture has been endorsed in committee reports, House and Senate, as well as by the Navy.

Now, I notice in today's testimony by Captain Pollack that the language which is new to me for the first time—

"This phase is called full-scale development in the DOD weapons acquisition process."

As you know, this is occasionally confused with deployment of an operational system rather than a continuation of the normal development required before entering into production. That distinction was never made during the 8 years that I have discussed it with the Navy, and in fact the Navy itself didn't make that distinction in its own presentation. This is the 1975 fiscal year House Appropriations Committee report. In that report it states:

"None of the funds provided should be used for FSD of the Sanguine system. Furthermore, the committee will not consider funding full development of Sanguine until a site has been selected, and State and local government agencies concerned concur in the deployment plan."

And then supplied for the record by Captain Galloway was this:

"The DOD is taking active measures to select a site for an ELF system and will not enter into full-scale development until a DSARC II review has been conducted. Design validation, in its latter phase, will continue concurrently with full-scale development. Design validation consists of the development, test, and evaluation of critical ELF components on a site independent basis. Once a site is selected and approved, full-scale development will be accomplished utilizing the components developed in design validation."

I have several quotes which I don't want to burden the committee with. The National Academy of Sciences, as everybody knows, entered into an agreement with the Navy assessing the biological and ecological effects of the project. So it is simply my posture at least that the committee and the Congress should stick to the posture it has clearly had for the past 8 years that the issue of full-scale development and/or deployment, both of which are used in a number of places interchangeably in the past, should not proceed until we have completed the environmental studies that have been contracted for, and the scientific community has had the opportunity to evaluate them. If there are no serious environmental impacts, then we are down to the issue of whether or not the system is vital to the defense of the country and should then go to full-scale development or deployment, however, one uses the word.

So my only point is that point that we have made on the floor of the Senate, and every time the issue has been before us, sometimes in colloquy with Senator McIntyre, and also with Senator McClellan when it was before the Appropriations Committee. And I will quote that colloquy with Senator McClellan for the record.

Senator NELSON. In a discussion on the floor with Senator McClellan December 13, 1973, I stated:

"I used the phrase which the Navy uses "full scale development of Project Sanguine," which, by their definition, means deployment of the system for use.

"Senator MCCLELLAN. I would not want them to do that. I am happy personally to accept the amendment."

So, Mr. Chairman, I think the record is clear that the intent, the congressional intent all along has been to complete the validation and the environmental studies which have been contracted for prior to requesting and proceeding with full-scale development. And I would hope that the committee would stay with the posture that it has had for the past several years.

[The prepared statement of Senator Nelson follows:]

PREPARED STATEMENT OF SENATOR GAYLORD NELSON

Mr. Chairman, I appreciate the opportunity to participate with this Committee in its evaluation of the Navy's $29.8 million FY '77 authorization request for Project Seafarer, the Navy's land based extremely low frequency (ELF) submarine communication system.

Before getting into the specifics of this year's request, I would like to thank and commend the Committee for the time and effort it has expended so far in its investigation of the various controversial issues generated by Project Seafarer and its predecessor system, Project Sanguine. Over the years, the Committee has done an outstanding job in monitoring this project through its research, testing, and evaluation phase.

The FY '77 budget contains a request for $4.65 million Full Scale Development of Project Seafarer. I believe this request for funds should be denied.

In the period of time since 1968 that I have been involved in this question, I have met several times a year with the Navy. They have given me their specific assurances, in writing and verbally, that they would not proceed with Full Scale Development until the validation phase was completed and the evidence was clear that the system worked.

In 1968, I raised the question about the adequacy of the Navy's environmental impact research program. Consequently, the Navy has undertaken many studies and has made a substantial effort in this area. The studies are not yet complete. Each year the Navy has personally assured me, either verbally or in writing, that they have no intention of going to Full Scale Development until the first two items were completed; that is until the validation phase and the environmental impact studies had been carefully evaluated by the independent scientific communities.

Then, and only then, if based upon hard and scientific evidence, there were no serious environmental implications, the Congress would proceed to debate the question of whether or not this communication system is vital to our nation's defense.

On that question, I don't have a viewpoint. Based upon this understanding as well as a three year record of Committee report language and legislative history, I respectfully request that the $4.65 million requested for Full Scale Development of Project Seafarer be deleted from the fiscal year 1977 authorization. Such a request, in my judgment, is premature and ill-advised because a very large majority of the information essential to the Congress making an informed and considered judgment is not yet available. Much of this critical information will be produced within the next 12 months. Rational decision-making and sound public policy demand that the congressional decision whether or not to authorize and appropriate Full Scale Development funds be deferred until an adequate information base can be developed.

In my view, the following information should be submitted to the Congress before authorization and appropriation of Full Scale Development funds are considered.

First, the report of the National Academy of Sciences' review and assessment of the Navy's ELF biomedical and environmental research program. The Academy, under contract to the Navy, will evaluate the quality of past research. It will look into the very serious allegations of mismanaged research and the suppressions of adverse biomedical impacts of the Seafarer system. The Academy will make recommendations as to the need for future research and an assessment of our understanding of this issue.

Second, a copy of the new draft environmental impact statement the Navy will file with the President's Council on Environmental Quality (CEQ) around the first of the year.

Third, a report of the conclusions of the Defense Systems Acquisition Review Council II meeting and the submission of a recommendation where the system is to be deployed. According to the Navy, both items are due in April 1977.

Fourth, a copy of the final environmental impact statement, including public as well as other federal agency comments, will be filed, according to the Navy, with the CEQ in May 1977.

And finally, the concurrence of affected state and local officials as to site selection. This aspect is due in July 1977. Each and every one of these reports is critical and indispensable to the Congressional evaluation of Project Seafarer.

It seems to me these hearings could initiate the discussion of the technical feasibility, environmental capability, and national defense requirements of Project Seafarer. It is a logical time for such a detailed and rigorous examination and evaluation to begin. We are between stages in project development. Full Scale Development clearly is closer to actual deployment of the system than it is to research. In fact, using the Michigan candidate site as an example, a large majority of the work performed under Full Scale Development in the construction of a pilot project would be incorporated into the full Seafarer system.

These hearings certainly can speak to the question of technical feasibility. These hearings can begin the evaluation of the environmental compatibility as well as strategic need of the system. It is obvious, however, that these discussions on the last two points cannot be completed until the information outlined above is made available to the Congress.

Therefore, I suggest we begin a meticulous examination of the Navy's ELF program. An integral part of that examination would be an underscoring of the existing congressional policy that this committee will not consider authorizing Full Scale Development funds until an adequate information base has been developed and a specific site has been chosen and local concurrence for that site has been obtained.

In addition to the question of funding Full Scale Development, and the question of environmental impacts, several other areas of the Navy's ELF program bear examination.

First, we should clearly understand why the Navy has shifted its money and effort into the development of a non-survivability communication system when the Congress

had been funding Project Sanguine, a survivability ELF system for 16 years. Second, we should clearly understand the relationship of Project Seafarer to Project Sheif. Third, we should clearly understand what implications such a shift holds in terms of defense and foreign policy considerations. Fourth, the Navy request for funding of Project Pisces should receive most careful scrutiny.

Full scale development

Question. How does the Full Scale Development (FDS) activity scheduled for FY 77 differ from previous research? How does it differ from actual deployment? Is FSD a fine tuning process?

Answer. All research and development accomplished prior to FSD has been for conceptual system design, designing of system components, establishing working parameters and defining environmental impacts. In FSD prototype components of the Seafarer system are to be built for operational test and evaluation. The components are planned to be installed in a testbed or test facility. The FSD test facility will be a small scale version of the production (deployed) system capable of limited ELF transmission to submarine mounted prototype receivers. FSD is primarily a process of verification that the system will perform as designed. Component adjustment, timing and final design modification will be accomplished as required.

Question. For each of the three potential candidate sites, what is envisioned by full Scale Development? What is the planned location and configuration of this segment? How many miles of cable are involved? How many transmitters will be constructed?

Answer. FSD would be essentially the same at any of the three candidate sites. An FSD test facility would be constructed within the selected candidate production system area. Regardless of location, the test facility would contain one transmitter station, one transmitter control center and approximately 130 miles of antenna cable. In Nevada the test facility antenna would be two parallel east-west lines, totaling 125 miles, in the northern portion of the Air Force Range. For the White Sands, New Mexico site, five east-west lines totaling 130 miles are envisioned to be located in that portion of the Missile Range to the northwest of the City of Alanogardo. In Michigan a 135 mile antenna consisting of one east-west and two north-south would be located entirely within Marquette County.

Question. For each potential site, how much federal and private land will be utilized? What are the provisions regarding rights of ways and easements?

Answer. The FSD test facilities at either the Nevada or New Mexico sites can be located entirely on federally owned or controlled land. In Michigan, the only federal land to be employed would be K. I. Sawyer AFB, where the transmitter station and transmitter control center would be placed. The antenna lines would be routed along existing rights of way such as state or county roads and utility lines for all but about 18 miles of the 135 mile array. This 18 miles represents private or corporate land for which easements would be obtained.

Agreements for co-use of existing rights of way and easements for new rights of way would be acquired by the Naval Facilities Engineering Command using established real estate procedures after site selection.

Question. How long will the Full-Scale Development program operate? How much will it cost?

Answer. The Full-Scale Development phase of Project Seafarer is planned to be completed November 1978. The follow-on effort, utilizing the test facility constructed during FSD and using prototype equipment, will be used to gather test data and to conduct biological/ecological and environmental studies. This work will continue as needed.

Question. How will the pilot project be operated? What technical and biomedical/signal be modulated and represent as closely as possible the specifications required by Project Seafarer?

Answer. The test facility will be operated by the design validation/full scale development contractor and will provide assistance to the Navy in conducting tests of prototype equipment.

Baseline Biological/Ecological studies will be conducted at the Full-Scale Development site. The response to Biomedical/Environmental question 4 identifies the studies which may be conducted at the final site.

The signal design and modulation used at the test facility will be identical to those to be used in the production system.

Question. What are the estimated costs of building Full Scale Development at each of the three candidate sites?

Answer. Costs for design and construction of FSD test facilities are:

	In millions
1. Nellis AFB, Nevada	$12.4
2. White Sands MR, New Mexico	12.6
3. Michigan U.P	11.9

These do not include the cost of prototype equipment design, fabrication and installation which are carried under system development tasks. All costs are escalated to 1978 estimated values.

Question. What are the estimated costs of deploying Seafarer at each of the three candidate sites? What are the advantages and disadvantages of each site?

Answer. The estimated investment costs for deploying Seafarer, based on candidate site, are:

	In millions
1. Nellis AFB, Nevada	$983
2. White Sands MR, New Mexico	815
3. Michigan U.P	315

These costs represent the optimum systems that can be achieved at each site while minimizing environmental impact. All are escalated to the 1979/1980 time frame. Major advantages and disadvantages of each site are:

a. Michigan—Major economies in construction cost; power usage; and operational performance are associated with a Laurentian Shield site installation such as typified by the Michigan area. Easy access to/from the construction site and ample logistics facilities exist in the area. Attainment of an acceptable interface with public facilities is the primary distinct factor in this site area.

b. Nellis—Good operational performance, total utilization of Federal land, and relatively remote location are major advantages. Different antenna lay down in mountainous areas; interface with ongoing operations; and additional logistic support required for work crews provide the most serious problem.

c. White Sands—Poorest operational performance area, if constrained as planned to total Federal Land usage. Remote location and popular local support of citizens are major advantages. Antenna lay down problems similar to that at Nellis.

Question. How much of the pilot project at each candidate site will be included in the deployment of the full system?

Answer. Regardless of site, the entire test facility, including buildings is planned to be incorporated into the production system.

Question. What contact, if any, has the Navy or anyone associated with the ELF communication program had with the Air Force concerning the status of Sawyer Air Force Base? Has the Navy developed a memorandum, similar to the March 25, 1976 memorandum from the CNO to CSAF concerning Project Seafarer for the White Sands or Nellis site?

Answer. Seafarer Project Office presentations at Strategic Air Command (SAC) Headquarters in Omaha on 17 September 1975 advised the Air Force of Navy desire to locate portions of Seafarer on K 1 Sawyer AFB.

Seafarer Project Office presentation at K 1 Sawyer on 18 September 1975—advised this base of Navy desire to locate portions of Seafarer system on the K I Sawyer complex.

On 11 November 1975 the Navelex Special Communications Project Manager, Captain Cobb, visited K I Sawyer and discussed the Seafarer site survey effort and Navy plans to locate portions of the Seafarer installation at K I Sawyer.

25 March 1976 Memorandum from CNO to CSAF concerning Project Seafarer.

Correspondence has been originated by the Chief of Naval Operations regarding the Nevada and New Mexico sites. These communications were directed to the Chief of Staff, Army; Chief of Staff, Air Force; Energy Research and Development Agency (ERDA) and other interested activities. This correspondence outlines the scope and concept of Navy use of these facilities for Seafarer.

Question. One page 11, Captain Pollak states that White Sands "cannot fully satisfy the Seafarer requirements" principally due to "avoidance areas." Please detail the problems posed by these avoidance areas at White Sands as well as the other requirements the White Sands site cannot fulfill.

Answer. Avoidance areas/features are specific areas which a Seafarer antenna will not be placed near or through. At the White Sands Missile Range Complex these areas features include such areas as:

Trinity Site National Monument, White Sands National Monument, an extensive instrumentation system involving over 2000 instrument sites used to support range activities, radar target scatter facility hazardous test area containing electro-magnetic radiation effects laboratory, South Range Launch Complex, small missile range, radiation hazard areas, power distribution stations, telephone central exchangers, built up headquarters area, Rhodes Canyon Range Center, Oscura Range Center, Stallon Range Center.

The White Sands National Monument has had the most significant impact on system design and antenna layout. It was originally felt that Seafarer could utilize the Army-Park Service—co-use area of the White Sands National Monument for the installation of Seafarer. The Department of Interior National Park Service has advised the Navy that they would object to any Seafarer installation on the White Sands National Monument lands and sited the wilderness recommendation White Sands National Monument, New Mexico, August 1972 as a guideline reference for their objections. The Navy has now excluded the National Monument co-use area for possible Seafarer installation. This exclusion resulted in a reduction in the number of miles of antenna that could be installed at White Sands. Other avoidance features for the most part can be avoided by antenna routing.

Question. Captain Pollak also states, "A system in Nellis would almost meet the requirements." What requirements cannot be met? What effect would this have if Nellis becomes an FSD site?

Answer. A Seafarer system at Nellis AFB would be able to transmit messages at 70 percent of the rate of specification requirements.

If Nellis becomes the selected site, no effect will be experienced on the Full-Scale Development phase of the Project.

Question. In your professional judgment,

what is the prime candidate site for Full Scale Development of the Seafarer system?

Answer. The Full Scale Development site should be within the selected site for the production system in order to allow for the most realistic testing of prototype hardware and the incorporation of the test facility into the production system, if built. The site selection process involves a complex evaluation of trade offs. Major economies in construction cost, power usage, and operational performance are associated with a Laurentian shield area site location. Evaluation of all these factors must be completed prior to any conclusive assessment of a prime candidate site.

Time table

Question. When does the Navy estimate having Project Seafarer operational? How was this date set?

Answer. The expectation is to have the Seafarer system fully operational April 1981.

This date is predicated on many factors which include site selection and approval in April-May FY 77, Congressional approval of funding to permit entering Full-Scale Development in FY 77, a production decision and availability of military construction and procurement funds in FY 79.

Question. It is my understanding a production decision is slated for the second quarter of FY 79. How was this time table established?

Answer. The pacing factor for a production decision is analysis of the data obtained from the operation of the Test Facility. Data required to support a production decision is expected to be completed in October 1978.

Question. What problems would be posed by any slippage of this schedule?

Answer. The most significant effect of schedule slippage is delay in the availability of the operational system for use by our submarines.

Question. If Full-Scale Development funds were denied in FY 77 but included in the FY 78 budget, what impact would a two to six month delay have on the program?

Answer. The start of FSD would be delayed about five months if funding were to be denied until FY 78. This delay could cause a delay up to one year in the start of the production system and subsequent full operational capability. A delay of this type will add approximately $3.6M to total cost due to increased contractor costs and escalation.

Biomedical/environmental

Question. What is the current status of the Navy's biomedical/environmental research program?

Answer. The "Navy Sponsored ELF Biomedical and Ecological Research Summary" (update) attached, (TAB A) and the (TAB B) (Question 4) provide a summary of the current status of the present program.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., April 2, 1976.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: This is in response to your letter of March 24, 1976, concerning the requirement for an arms control impact statement on Project Seafarer.

As you point out, based on the single criteria of a $250 million estimated total program cost, Seafarer, like many Department of Defense sponsored programs, is affected by Section 36 of the Arms Control and Disarmament Act and subject to an arms control impact statement. You are aware, however, that the legislation which amended the Arms Control Act by adding this section was not enacted until December 1, 1975, very close to our FY 1977 budget submission date. Because the passage of this legislation occurred so late in our budget cycle, it was not possible to establish the requisite internal operating procedures and to accomplish the preparation of statements on all affected programs for the FY 1977 authorization request. The Secretary of Defense decided to adopt interim procedures pending full compliance next year.

You have seen a copy of these interim procedures. Basically, they limit the submission of arms control impact statements in conjunction with the FY 1977 budget to selected major programs. The Congress was notified of this intention when Defense submitted legislation to authorize appropriations during FY 1977. In selecting the programs on which to prepare statements this year, emphasis was given to the apparent intent of Congress in enacting Section 36—namely, the arms control impact of direct application weapons, particularly those which had passed DSARC II. As a command and control system still under development, Seafarer was deleted from the list of selected programs.

Although the preceding paragraph explains why a formal arms control impact statement on Project Seafarer has not been prepared this year, I cannot see how a communication oriented program such as this would impact on current arms control policies and negotiations at this time. There are no present agreements which constrain systems of this nature and such systems are not the subject of any ongoing negotiations. In light of Seafarer's capability to assist in minimizing the vulnerability of our submarine forces, the system enhances the credibility of one of our major deterrents and thus adds to stability.

You may be assured that the Department of Defense has fully balanced the impact of the Seafarer project and all other Defense programs on arms control against our overall national security needs.

Sincerely,

JAMES P. WADE, Jr.,
Deputy Assistant Secretary.

Question. Please describe the present and envisioned anti-submarine warfare capability and threat. How are the presently identified ELF communications systems, Projects Seafarer, Sanguine, and Shelf, expected to meet the enemy's current capability and future capability?

Answer. The force structure of the Soviet Navy has changed markedly since the mid-1950's reflecting the change in the Soviet Navy's role from a coastal defense force to a worldwide instrument of Soviet power with a true open ocean capability. The intentions of the Soviet in regard to seapower were recently summarized by Fleet Admiral Gorschov, the Soviet Chief of Naval Operations, in his book "Seapower and the State". He wrote, in regard to countering U.S. naval ballistic missile submarines—"The employment of naval forces against the enemy's seaborne strategic nuclear systems in order to disrupt or blunt their attacks against ground targets to the maximum degree has become the most important of the Soviet Navy's efforts." The foregoing, coupled with Soviet technological capability as evidenced by their development of sophisticated anti-submarine warfare equipment and techniques, dictates the need for the capability provided by ELF. Concern centers on their ability to detect and track submarine antennas displayed above the surface or in the near surface depths.

The characteristics of extremely low frequencies to penetrate to the deep ocean depths will permit the submarine to operate without an antenna above or near the surface.

Reference should be made to the SSBN Security briefing for the Senate Armed Services R&D subcommittee on 23 March 1976 and that portion of the Seafarer briefing for the same committee on 6 April 1976 provided by Captain John Shilling which provided extensive detail on techniques and threat.

Question. Is Project Sanguine dead?

Answer. Research and development for Project Sanguine was terminated in early 1975.

Question. Although the Navy has made it clear that deployment of Project Seafarer is not in pursuit of a U.S. first strike capability, please respond to concerns of those who believe an enemy might well perceive the construction of such a non-survivable command and control system in that manner.

Answer. The concerns cited are appreciated. It is the position of the Navy that the addition of this system to our existing communications network should make a significant contribution toward reducing the probability of a nuclear attack on the United States. Specifically, it would add redundancy to our communications, improve our capabilities against Soviet ASW, and thereby, strengthen the credibility, of our fleet ballistic submarines to retaliate against such an attack.

ADDITIONAL QUESTIONS SUBMITTED BY SENATOR NELSON REGARDING PROJECT SEAFARER

Senator MCINTYRE. Thank you, Senator Nelson.

Senator TAFT. I notice the final slide here says: "ELF is important to national security,"

Also above it says: "Rapid system attainment is essential."

Is that any more true today than it was last year or the year before?

Senator MCINTYRE. Admiral Boyes, you are here as a backup witness. I want to recognize you at this time. Perhaps you could take on Senator Taft's question.

Admiral BOYES. Thank you very much.

I think the answer to the question, Senator, is that the Soviets are becoming more oriented, and their technology is improving. Certainly they are fully aware of the very serious efforts required on their part to locate and detect the FBM submarines. And it is our belief that they take full advantage of technology, that they probably are taking full advantage of technology, and that therefore the sooner that we can test a system such as Seafarer, and ultimately deploy it, the safer our retaliatory capability will be.

I hope I have answered your question, sir.

Senator TAFT. Is the Backfire bomber to be developed as a part of that project?

Admiral BOYES. I am not qualified to answer that question, I am sorry.

Senator TAFT. How long would it take you to build the system if you get the green light on it?

Admiral BOYES. I think the system will take about 2½ years to build, once it has been tested.

Senator TAFT. What is involved in the preceding vessel? Would they have to refit?

Admiral BOYES. They will not be required to go into the yard to refit for an extensive period of time. The receivers, of which we are buying 15 this year, will become the prototype. And that type of receiver can be installed generally by a small yard force or a tender, sir.

THE B-1 BOMBER

Mr. HAYAKAWA. Mr. President, I would like to address an issue today that is of grave importance to the security and national defense of the United States—the B-1 bomber.

For the past few months, I have refrained from taking a definite and final position on the B-1 bomber program until I had studied all the pertinent material. As an educator for many years, I want to be thoroughly informed about both sides of an issue before committing myself to either side. I recently traveled to Edwards Air Force Base where I saw the B-1 bomber and was briefed in depth

on it. I have also read extensive material on the subject. In addition, I reviewed the Quanbeck-Wood study which assesses the B–1 bomber and proposes alternatives. After careful study and thought, I now feel confident in giving the B–1 bomber program my unqualified support.

From the outset, I have said that the B–1 bomber is an absolutely magnificent plane. It is two-thirds the size of the B–52 but carries twice the payload, it flies at Mach 1.6 at high altitudes, it climbs above 50,000 feet, it can cruise at treetop level, it is hardened against nuclear blast effects, it has a greater penetration speed, it has a smaller radar cross-section than the B–52—I could go on and on.

Having actually seen the plane, one cannot help but be impressed by its sheer beauty, its superb construction, and the brilliant technology that went into its creation. The B–1 bomber, I am convinced, will make aviation history.

The question, then, is not of the plane's capabilities—that, I think, is quite clear. Rather, the question is whether or not a triad is needed and the B–1 bomber's place in the triad.

I favor the triad concept for several reasons. For one, three systems provide a safeguard in the event of the failure of any one element. Second, the systems strengthen our deterrent posture and provide us with counterattack options by complementing each other. And, it will protect us in the event of a Soviet technological breakthrough against one of the systems. Already the Soviet Union is researching the development of a charged particle beam device that would render our ballistic missiles useless.

Manned bombers are the only element of the triad which have been proven under combat conditions. They can be launched and recalled, retargeted in flight, and are under the control of both the central command agency and experienced, highly trained crew members. In my opinion, manned bombers are an important element of the triad and the B–1 is the bomber that can do the job.

Opponents of the B–1 bomber program and other strategic military programs like to label proponents of these programs as "war lovers." Nothing could be farther from the truth. History has proven all too often that it is military weakness that leads to war more often than does strength. In this uncertain time when nations are seeking to protect their sovereignty and security, a strong national defense is the most powerful bargaining chip to the keeping of peace. Such a defense serves to deter confrontation—not to start it. If we do not have this weapon we are likely to need it desperately; if we have it we are likely never to have to use it.

The B–1 bomber is a vital element of our overall strategic defense. I therefore offer my full support for the production of the B–1 bomber.

THE B–1 BOMBER PROGRAM

Mr. CULVER. Mr. President, this bill contains nearly $1.9 billion for the B–1 bomber program—a huge sum in itself, but only the latest installment in what may well be a $28 billion program.

I want the record to be clear that my vote in support of this bill does not imply support for the B–1. Last year the Senate debated and approved legislation deferring the production decision until this year, when a new administration took office and began a full-scale review of the B–1 and related strategic programs.

President Carter, who as a candidate last year called the B–1 wasteful and unnecessary, has yet to announce his decision. I hope that he will act soon, so that we can have the benefit of his judgment in time for our consideration of the defense appropriations bill.

Meanwhile, we have additional evidence of increasing costs of this enormously expensive aircraft. The latest official estimate gives the program unit cost of the B–1 as $101.7 million—nearly triple the original projection. Moreover, the Senate Armed Services Committee has been informed that an independent cost analysis team in the Air Force has estimated that the actual cost of procurement could be 20 percent higher, leading to a unit cost of nearly $117 million.

Although the Air Force prefers the lower estimate, the higher figure may well turn out to be the actual price tag which U.S. taxpayers will have to pay.

Mr. President, I hope that President Carter will weigh these high costs and the marginal military benefits promised by the B–1 and will choose a better alternative.

RESERVATIONS ABOUT THE FY 1978 MILITARY AUTHORIZATION PROCUREMENT BILL

Mr. PROXMIRE. Mr. President, even though I have serious reservations about the fiscal year 1978 military authorization procurement bill, I will vote for this measure on final passage since it contains financing essential to the national defense.

This does not mean, however, that I find either the total amount authorized in this bill acceptable or individual items. On the contrary, there are many issues that are not adequately resolved in this bill.

First there is manpower. The limitation of generals and admirals is far too restrained. As Admiral Rickover has testified, we could reduce the number of generals and admirals by 30–50 percent.

Second, there is civilian manpower. The 2-percent cutback in civilians in the bill is far too small. There are more civilians employed at the Defense Department than all the other Government agencies combined except for the Post Office.

Third, the continued funding of the B–1 bomber is unnecessary and in fact wasteful of scarce defense resources. We should have made a decision on the B–1 long ago. I find myself in agreement with the Senator from Arizona (Mr. GOLDWATER) on this issue. It is time to make a final B–1 decision and get on with other critical defense programs. My choice would be to say no to the B–1 and begin looking at the alternatives.

Fourth, we need to pay more attention to solving the grade creep problem. The reduction in high level civilian employees in the Defense Department is a step in the right direction but may be too little too late to reverse the $1.1 billion annual cost of grade creep for both military and civilian personnel.

Fifth, there is no need to continue with the rewinging of the C5–A. At a total cost of $1.3 billion, the rewinging program is just about as disastrous as the original aircraft procurement. The money could better spent on new aircraft rather than fixing the C5–A.

Sixth, there still are about 300 military servants authorized in this bill. Although cut down substantially from prior years, there is no justification for continuing this program at any level. The brass can find ways to hire domestic help just like other Americans.

Mr. President, there are many areas I could mention that would document where several billion more could be saved in this budget. We are nowhere near the efficiency reduction of $5 to $7 billion mentioned by the President during the last campaign. I am convinced that by cutting away at the fat in this budget, we could encourage a more efficient fighting force.

THE F–18

Mr. DANFORTH. Mr. President, I was pleased to see that the Senate Armed Services Committee recommended the full amount requested for fiscal year 1978 by the administration for the F–18 aircraft—$626.6 million for research and development, and $29.3 million for long-lead procurement items.

The F–18 is, as you know, a multipurpose strike fighter designed to replace both the F–4 for the U.S. Navy and Marine Corps in the fighter role and the subsonic A–7 for the Navy in its attack role. By replacing two aircraft with one, enormous savings can be achieved in both production and maintenance costs throughout the life of the new aircraft.

I noted that in the report accompanying this bill, the committee stated that "maintainability and reliability criteria require increased emphasis in design and development of new weapon systems." In fact, reliability, maintainability, and survivability have been major design criteria for the F–18. The F–18 Hornet will have reliability improvements three to six times greater than the A–7 and the F–4. Less maintenance will be required for the Hornet than for either of the two older aircraft. And drawing on the recent experience in Vietnam, protection and system redundancy have been built in to achieve improved survivability.

In the fighter role, in comparison with the F–4J, the Hornet will require 53 percent less maintenance man-hours per flying hour and will have 31 percent better range than the F–4. Its turning performance will be 70 percent better than the F–4 and it will out-accelerate the Phantom by better than 30 percent. Its radar system will be far simpler; the new, more accurate F–18 radar will have only 12,000 parts compared with 20,000 parts in the F–4. Besides the technical and performance improvements such a radar system will have, fewer parts means improved reliability and easier maintenance.

Because of improved engine and aircraft design, the F–18, compared to

either the F–4 or the A–7, will take off in a shorter distance and will require substantially less maneuvering by an aircraft carrier to enable the plane to take off.

Increased maintainability also means that fewer personnel will be needed. Whereas an F–4 squadron requires approximately 270 people and an A–7 squadron requires about 260 personnel, the new F–18 will need only 204 people per squadron. This reduction in personnel obviously means reduced operating costs.

In the attack role, in comparison with the A–7, the F–18 will possess a higher subsonic speed and a better turning rate. An improved turning rate means that the aircraft can more easily escape hostile enemy action which in turn means improved survivability.

The F–18 will also have an improved air to ground weapons system which will give it substantially better bombing accuracy than either the F–4J or the A–7E. Therefore, it will need to spend less time in the target area. This feature also means less time over hostile territory and, again, improved survivability.

Because maintainability has been built into this aircraft from the beginning, the Hornet will require 25 percent fewer maintenance man-hours per flying hour than does the A–7. This means lower operating costs and increased operating availability.

Although the engine is in the same thrust class as the F–4 engine, it will have 7,700 fewer parts and will be 24 percent shorter in length and 45 percent lighter in weight. Prior to the time the aircraft becomes fully operational, the engines will receive 16,000 hours of testing compared with only 10,000 hours of testing in most other aircraft programs. This also means improved reliability, maintainability and performance.

This improved performance will be accomplished in an aircraft smaller than either of the two airplanes it is planned to replace. Three F–18's will take approximately the same amount of space as two A–7's and one F–4, a vital factor aboard an aircraft carrier where space is at a premium.

Finally, the F–18 reverses the trend of ever-increasing aircraft costs. By any measure, an F–18 will cost slightly less than half the cost of an F–14.

Mr. President, the F–18 is a realistically priced aircraft which will help meet the Navy's aircraft needs in the 1980's at reduced operating costs and improved performance. The committee has recognized that this combination is deserving of the full support of both the Congress and the administration.

Mr. EAGLETON. Mr. President, I have been most interested in Senator DANFORTH'S remarks on the F–18. I was pleased with the strong support which has been given by the Senate Armed Services Committee to the Navy's F–18 program. In its report the committee notes that the F–18 is an "excellent" airplane for its missions:

> The F–18 excels both as an escort fighter and as a light attack strike plane the two roles that the Navy and Marines plan for it.

The committee has recommended a total of $655.9 million for the F–18 program, which is the full amount requested. I believe this decision is a sound one, and that these funds will be well spent.

The F–18A naval program is well underway. The F–18, a multimission strike fighter, will replace the aging F–4 for the Navy and Marine Corps as fighter escorts, and the subsonic A–7 for the Navy's attack role. Its twin engines and improvements in radar and missile technology mean that the F–18 will have much better performance than the two aircraft it replaces—and the R. & D. costs are considerably less than those required to develop two separate aircraft.

The Navy has placed great emphasis on reliability, maintainability, and survivability as the F–18 is developed. The F–18 is anticipated to have a reliability of three to six times greater than the aircraft it replaces; maintenance will be significantly less than either the F–4 or A–7. Twin engines, sensors, and new sophisticated radar to use an all-weather missile, indicate that this will be the most reliable and maintainable fighter/attack aircraft ever.

It is important to note the F–18's low risk procurement schedule, and a most conservative production build-up compared to any recent fighter programs. The production decisions will be based on well-documented development results.

The F–18, when deployed on the Navy's carriers, will be helpful in simplifying the carrier deck, and will supplement the unique capability of the Navy's F–14 aircraft and its missile—a very valuable fighting addition to Naval airpower.

THE F–18 PROGRAM

Mr. KENNEDY. Mr. President, I rise to express my concern about reports that some service personnel are suggesting that the Navy should not request funds for the development of the F–18 fighter/attack aircraft for the 1979 fiscal year.

It seems to me that dropping the F–18 will at once weaken our defense through the 1980's and yet increase the cost of providing it. The F–18 was chosen by the Navy after competition between it and other planes showed that it better meets the Navy's needs, and will ultimately be less expensive.

Increasing production of the F–14 rather than starting F–18 production may save some money in the first few years but will prove more costly after that. No one denies that once in production, the F–18 is a less costly plane, unit for unit, even if we are optimistic about ironing out problems in the F–14. Moreover, we can hardly ignore the fact that while Malcolm Currie, the Defense Department's former Director of Defense Research and Engineering has noted of the F–18 that "all major milestones have been on schedule," the F–14 has been plagued with problems, prompting U.S. News & World Report to label an article on it "Inside Story of a Troubled Plane That Will Cost Taxpayers Billions." The magazine noted, in 1976, that there were no end of troubles in sight.

These technical troubles of course reflect on the ability of the F–14 to perform in our defense arsenal as well, while Vice Admiral Turner testified in the House Armed Services Committee to the reliability and maintainability of the F–18.

But even if we match up a fine tuned F–14, the F–18 is a better fighter plane and just as good an attack bomber.

In sum, I must note here that I will carefully review the fiscal year 1979 budget when it comes in to see if the F–18 has been abandoned, for the facts available to me suggest that the competitive selection process by which the Navy chose the F–18 produced the better plane.

Mr. President, one aspect of the legislation we are presently considering, section 612, is particularly significant. These provisions are the result of intense efforts on the part of the distinguished members of the Armed Service Committee to focus on the often haphazard and costly ramifications of base realinement decisions in the past.

I am especially heartened by the committee's strong endorsement of these provisions and the recognition that permanent law in this regard is necessary.

I concur with my colleagues on the Armed Services Committee that major base realinements do have a significant impact on the surrounding community—often an economically devastating impact—and decisions concerning base realinments should be made carefully and with adequate public participation.

On previous occasions in this Chamber I have emphatically stated that military bases should not be maintained when there is no military necessity or when significant and genuine economies in defense expenditures can be realized by realinement.

However I have also stated that realinements cannot be made indiscriminately and for political reasons. And the people of the Commonwealth of Massachusetts have adequate examples to demonstrate that base realinements in the past have been capricious and token nods to rational decisionmaking and good management on the part of the Defense Department.

While the list of these arbitrary decisions which seriously impaired the economic development of Massachusetts is too long to enumerate, there is one example that these base realinements provisions guaranteed a rationale and objective decisionmaking process to the residents of local communities and military personnel at a military installation in my State.

Over a year ago the Army announced that Fort Devens, located in Ayer, Mass., was a candidate for major realinement. Appropriate studies of military justification, and cost analysis were undertaken. As a result of these studies, President Carter was able to announce that Fort Devens stood on its own merits and consequently was no longer a candidate for major realinement.

The procedures set forth in section 612 are essential because they give Congress and the public adequate opportunity to contribute to the decisionmaking process. The procedures set forth in section 612 also assure that the adverse impacts of base realinements on local communities will be adequately considered before such action is taken. Possibilities to

mitigate these adverse impacts must also be explored.

Persons affected by base realinements are entitled to the guarantees which these provisions provide. They are entitled to the rationale decision-making process established by these provisions.

It is unfortunate in terms of the economic devastation left behind and the personal turmoil caused to personnel at military installations that these provisions were not implemented sooner. However it is important that these provisions were again included in the military construction authorization bill for fiscal year 1978. The people of Massachusetts whom I represent know exactly what they mean in human, economic, and military terms.

Mr. President, I would also like to make one other observation on the military construction authorization bill. I noted and I know my other colleagues from New England also noted that out of an authorization request of $3.6 billion for fiscal year 1978 only about $11 million of that amount is earmarked for New England. I think it important to point this out for the RECORD.

(This concludes additional statements submitted on H.R. 5970).

Mr. STENNIS. Mr. President, as far as I am concerned, I am ready for the third reading of the bill.

The PRESIDING OFFICER. The question is on agreieng to the committee amendment as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read a third time.

Mr. STENNIS. Mr. President, I request the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Is all time yielded back?

Mr. STENNIS. All my remaining time is yielded back.

Mr. TOWER. Mr. President, the Senate, I think, will soon vote on this measure. In my view, at best, it is barely adequate. Certainly, if further reductions are incorporated in next year's defense budbet——

Mr. STENNIS. Mr. President, may we have order? The Senator from Texas is entitled to be heard.

The PRESIDING OFFICER. Let us have order.

Mr. TOWER. Mr. President, the Senate will soon vote on the fiscal year 1978 Defense bill for defense programs which, at best, is barely adequate. Certainly, further reductions cannot be incorporated into next year's defense budget without taking unnecessary risks in meeting the national security requirements of the United States.

In the opening statement of our distinguished chairman, he commented on the relation of this bill to the overall budget ceilings for the national defense function defined in the First Concurrent Budget Resolution. Even though the budget target of $118.5 billion for national defense represents a $1.6 billion cut from the President's budget request, it is the committee's understanding, as explained by the chairman, that certain financing arrangements involving foreign military sales, inflation rate adjustments, and unobligated balances from previous budgets can be used to account for this reduction. I want to stress that should these accounting adjustments prove to be inadequate for the purpose of identifying a $1.6 billion reduction, the Senate must not permit reductions in procurement and research programs authorized by this bill in order to make up the deficit. I understand that the distinguished chairman of the Budget Committee, the Senator from Maine, and the able ranking minority member, the Senator from Oklahoma, support the bill reported by our committee. Though I have yet to see a concise explanation of just how we can go from $120 billion in defense to $118.5 billion in defense without possibly jeopardizing some of the programs supported in this bill, I will accept the judgment of the Budget Committee's leadership and the distinguished chairman of our committee that this difference can be reconciled by simple "bookkeeping adjustments." Mr. President, I want the record to show that it is not the will of this body that additional reductions to the defense program authorized in this bill be made in order to comply with levels in the First Concurrent Budget Resolution.

Mr. President, the support of this bill by the Senate marks an important step in the direction of continuing the essential modernization of our weapons systems and equipment inventories that have long been in need of attention. The real increase in our defense expenditures contained in this bill, although far less than I believe necessary, is vital for our forces.

Mr. President, I wish to commend to the attention of the Senate the work of those minority members of the committee, particularly those who serve as the ranking minority members on our major legislative subcommittees. These members include Senator GOLDWATER for the Tactical Air Power Subcommittee, Senator SCOTT for Manpower and Personnel Subcommittee, Senator BARTLETT for the Research and Development Subcommittee, and Senator GARN for the Subcommittee on General Legislation. In addition, I would like to commend the efforts of the able staff of the Committee on Armed Services for their diligent work on this bill.

Lastly, Mr. President, I want to call to the attention of the Senate that many major decisions which have not been addressed in this bill will come before the Senate next year as a part of the fiscal year 1979 budget request. In several critical areas of our national security program, we will be required to pass on proposals that will weigh heavily on the military posture of the United States for the remainder of this century. Thus, as one member of the committee, while I consider this year's bill to prove adequate funding for the Armed Forces, I would signal to all my colleagues that serious problems in our preparedness remain which we must not fail to more fully address next year. Thank you, Mr. President.

Mr. STENNIS. Mr. President, the Senator from Texas has been a highly valuable Member during his first year as ranking minority member of our committee. I thank him personally, too, for, when he heard this bill was up—we changed plans a little—he raced back here after canceling out a speech engagement. It is characteristic of the way he approaches his duties here. I thank him again.

Mr. TOWER. I thank my distinguished chairman for his very kind and generous remarks. I think it goes without saying, Mr. President, that I am grateful to have the opportunity to serve under the leadership of one of the giants of the Senate—not for this time, but for all time—JOHN STENNIS. He has done his usually splendid job on this bill.

I believe this is the first time we have ever passed a procurement bill in 2 days' time. I think it is a great tribute to our distinguished chairman. I can remember when it has taken 3 or 4 weeks to pass one. I think we would both be remiss if we did not thank the other Members of the Senate for their cooperation in helping us to expedite the passage of this bill.

Mr. STENNIS. I thank every member of the subcommittee, if the Senator will yield to me a moment, including those who became Members this year, and also the members of our splendid professional staff, who know the subject from working in depth—including Mr. Frank Sullivan, in his first year as our chief of staff. His work has really been outstanding.

Mr. TOWER. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The yeas and nays have been ordered. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from California (Mr. CRANSTON), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Montana (Mr. MELCHER) are necessarily absent.

I also announce that the Senator from Hawaii (Mr. INOUYE) is absent because of illness.

I further announced that, if present and voting, the Senator from Arkansas (Mr. MCCLELLAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE) is necessarily absent.

I further announce that the Senator from Oklahoma (Mr. BARTLETT) is absent due to illness.

The result was announced—yeas 90, nays 3, as follows:

[Rollcall Vote No. 144 Leg.]

YEAS—90

Allen	Gravel	Nunn
Anderson	Griffin	Packwood
Baker	Hansen	Pearson
Bayh	Hart	Pell
Bellmon	Haskell	Percy
Bentsen	Hatch	Proxmire
Biden	Hathaway	Randolph
Bumpers	Hayakawa	Ribicoff
Burdick	Heinz	Riegle
Byrd, Harry F., Jr.	Helms	Roth
Byrd, Robert C.	Hollings	Sarbanes
Cannon	Huddleston	Sasser
Case	Humphrey	Schmitt
Chafee	Jackson	Schweiker
Chiles	Javits	Scott
Church	Johnston	Sparkman
Clark	Kennedy	Stafford

Ford	Metzenbaum	Williams
Garn	Morgan	Young
Glenn	Moynihan	Zorinsky
Goldwater	Muskie	
	Nelson	

NAYS—3

Abourezk	Hatfield	McGovern

NOT VOTING—7

Bartlett	Inouye	Melcher
Brooke	McClellan	
Cranston	McIntyre	

So the bill (H.R. 5970), as amended, was passed.

Mr. TOWER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. STENNIS. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make clerical and technical corrections in the engrossment of the Senate amendments to H.R. 5970.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon, and that the Chair be authorized to appoint conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. STENNIS, Mr. JACKSON, Mr. CANNON, Mr. MCINTYRE, Mr. HARRY F. BYRD, JR., Mr. NUNN, Mr. CULVER, Mr. HART, Mr. TOWER, Mr. THURMOND, Mr. GOLDWATER, Mr. SCOTT, and Mr. BARTLETT conferees on the part of the Senate.

Mr. STENNIS. Mr. President, I ask unanimous consent that the bill as passed be printed in full, with amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I want to express my special appreciation for the cooperation and assistance which has been extended to me by all concerned on this legislation, from the beginning of the Senate hearings and on down until now. I especially want to thank the ranking minority member, Senator TOWER, for his fine work.

As we all know, Senator CANNON, chairman of the Tactical Air Subcommittee, Senator MCINTYRE, chairman of the Research and Development Subcommittee, Senator NUNN, chairman of the Manpower and Personnel Subcommittee, and Senator CULVER, chairman of the General Legislation Subcommittee, have also carried heavy responsibilities on this entire authorization bill in its preparation and presentation. Also, Senator CULVER conducted a special study on readiness and Senator HART looked into the shipbuilding portion of this bill. Both of these Members did a fine job in presenting the results to the committee.

I should like to extend the personal appreciation of myself, as well as the members of the committee, for the consistent hard and fine work performed by our able committee staff. Floor action is only a small portion of the time consumed in the preparation of this legislation. This year the committee received from witnesses testimony totaling thousands of pages, and the staff in their usual capable and professional manner analyzed all the facts in order to assist our Members in making the decisions. The entire staff was involved in this to some degree, and I should like to specifically mention their names:

Mr. Francis J. Sullivan, our staff director, and our other professional staff members John C. Roberts, John T. Ticer, Phyllis A. Bacon, Charles J. Conneely, Charles H. Cromwell, George H. Foster, Louise Hoppe, Edward B. Kenney, Don Lynch, Robert Q. Old, George Riedel, Larry K. Smith, George Travers, Roberta Ujakovich, William L. Ball, Rhett B. Dawson, Kenneth W. Fish, and Ernest Evans.

I also want to pay special tribute to the clerical staff since each of them participated in getting this bill passed. They are Doris Cline, Doris Connor, Chris Cowart, Marie F. Dickinson, Fran Frazier, Jeanie Killgore, Judy Landesman, Betty Mayo, Sue Ann Spatz, and Diane Varoz.

Finally, Mr. President, I want to acknowledge the printing work performed in connection with this bill. As the Senate well knows, this annual military procurement authorization bill is a very complex piece of legislation involving thousands of testimony. On behalf of the entire committee I would like to specifically thank Messrs. G. D. Strickler, Nathan Segal, Elbert Payne, Richard Caswell, and the Government Printing Office for their hard work and expert handling of this massive amount of material.

Mr. THURMOND. Mr. President, I commend the chairman, the Senator from Mississippi (Mr. STENNIS), and the Senator from Texas (Mr. TOWER), minority member, for their excellent handling of this important bill, H.R. 5970.

This bill provides important funding for essential defense programs, and I am pleased the Senate has given such strong support to the committee bill.

ORDER FOR STAR PRINT—REPORT NO. 95–114, S. 1305

Mr. NELSON. Mr. President, in the printing of report No. 95–114 for S. 1305, changes in existing legislation were not properly noted in italics. I, therefore, ask unanimous consent that report No. 95–114 be star printed, with the corrections as herewith submitted.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION TOMORROW OF S. 826, DEPARTMENT OF ENERGY ORGANIZATION ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the orders for the recognition of Senators have been completed, the Senate proceed to the consideration of S. 826, the Department of Energy Organization Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 12:30 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 12:30 p.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRANSFER OF MEASURES TO THE UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are three measures on the general orders calendar, Calendar Orders numbered 179, 180, and 182, which have been cleared for action by unanimous consent, and I ask that the clerk transfer those three measures to the Unanimous Consent Calendar.

The PRESIDING OFFICER. They will be so transferred.

JOINT REFERRAL OF A MESSAGE FROM THE PRESIDENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a message from the President of the United States relative to a governing international fishery agreement between the United States and Cuba be jointly referred to the Committees on Commerce, Science, and Transportation, and Foreign Relations. Earlier today Senator STEVENS had an objection. He has now cleared that, I understand, so I renew the request.

The PRESIDING OFFICER. Without objection, it is so ordered.

MAY 17, NORWAY INDEPENDENCE DAY

Mr. HUMPHREY. Mr. President, I feel it is most appropriate that the Senate of

the United States should once again be reminded, as indeed I hope the entire Nation of the United States of America will be reminded, that May 17 is Norway Independence Day, and I am happy to say that today my friend of Swedish extraction, the junior Senator from Minnesota (Mr. ANDERSON) presented me with a pin which I have in my hand, May 17, Norway Independence Day, Norway 1814.

Now, this is very significant to me, because my mother was born in Norway, and the first celebration that I can recall as a youngster, according to the reports that I have heard, and that is why I recall them, it is said that my mother one day found she could not find her little boy, and they looked around, and I was in a parade in the great metropolitan center of Codington County, S. Dak., known as Wallace.

I think there were approximately 150 Norwegian descent, with one or two other stragglers who had come in, and I was marching in the parade at the tender age of 4.

Ever since then I have always taken special interest in reminding my family, my friends, and those who are not even interested in having me remind them, that May 17 is Norway Independence Day.

Today in Minnesota there is jubilation and joy and happiness amongst those of Norwegian ancestry. Might I add, there are a rather substantial number of our constituents, and I might also add that some of them have been so broad-minded and charitable and understanding as to intermingle with people from other parts of the world, so you will have occasionally someone of Norwegian and Swedish ancestries.

The distinguished Vice President of the United States also claims to be Norwegian. He claims it, and I have reason to believe it is true, because only last year he visited the home of his grandparents.

Now, I visited the home of my mother, not just my grandparents. My mother's home is Kristiansand, Norway, a beautiful little community near Stavender in the southeast section of Norway. My grandfather was a Norwegian sea captain for over 15 years, sailing the high seas. He came into South Dakota as a young man feeling and with the understanding that he would be able to sail on the Missouri River.

When he arrived he found there were more sandbars than there was water in the Missouri River, so he retreated to the East, so to speak, and ended up in Dade County, S. Dak. He was one of the homesteaders, one of those who received some of the original Federal Government grant of 160 acres of good South Dakota land.

Now, all of this, of course, relates to this historic day, May 17. I wear today with great pride, this pin which, by the way, I had to literally pull off the jacket of my distinguished friend, the junior Senator from Minnesota.

I said it is bad enough to have had the Swedes dominate the Norwegians, and then to have them come in and wear the May 17 pin, was just a little too much. But because he is such a generous and good man and such a wonderful partner in the Senate, he said, "I will let you have it for a half hour," which means I have to cut this speech short which, I know, is going to be of great sorrow to my colleagues in the Senate (laughter) because, as you know, I am slow to warm up, but once I get started, I tell you it is that Norwegian blood; when you live up there in that north country, it takes a little while to thaw out.

By the way, I see my friend from Massachusetts (Mr. KENNEDY). Might I say that he is of Irish extraction, and very proudly so. But I think the record should reveal that had it not been for those of Norwegian background and the Vikings that the Irish to this day might yet be pagans, because it was the Vikings who brought the Christian faith to the Irish.

The Irish were ungrateful. We stayed there 100 years bringing them into the culture of the rest of the Western world and Christendom. What did they do? They kicked us out, and the poor Norwegians have been a-sail on the high seas ever since, trying to find some little place where they could continue their missionary work. They came to Minnesota, they came to South Dakota, and they have been doing very well in those areas.

In case the Senator from Massachusetts would like me to yield for any adjustments of the historical accuracy of what I just said, I am willing to yield at this point.

Mr. KENNEDY. Just to bring history into its proper perspective, the Senator is quite correct; the Vikings came to the southern shores of Massachusetts. If the Senator in his many travels might have visited some of the small inlets in the lower capes, he will still see the fastenings of the Viking ships that came there. But if the Senator remembers, after Leif Ericson traveled there, and he went back home to Scandinavia, and he reported back about his trip into this area, which then was Vineland, and it is indicated that he went to Martha's Vineyard and Nantucket, he described at that time certain words that were being used in certain colors and features of those who greeted him.

If you travel into the deepest recesses of Norway's historical places, you will find that these words that Ericson brought back were Gaelic words; so this helps to reaffirm the basic discoverer was St. Brendan the navigator, who came to this country in the 600's or 700's on the ships which were called currachs at that time, and if you read the oldest, oldest, oldest Irish history to see as St. Brendan traveled across through Iceland down through Greenland, he came to Massachusetts to welcome Leif Ericson, and I am glad we can get that straight on the floor of the U.S. Senate. [Laughter.]

Mr. HUMPHREY. May I say a word for Christopher Columbus? [Laughter.] We would not want to leave out that great navigator. But truly this was something I thought we needed, we needed a moment here—I have great respect for a gallant little country, the country of Norway, that is a faithful ally in the NATO Alliance, and that has a splendid record of democracy of the highest standards and, above all, to say something in the Senate today that would enlist the sort of repartee we have had here this afternoon.

I am very proud that I can now present the pin back to my esteemed colleague, Senator WENDELL ANDERSON, of Minnesota, who is much loved by the people of our State and who, might I say, when he attends Norwegian celebrations is Norwegian, and when he attends Swedish celebrations like St. Gunnar's Dag, he is Swedish but, above all, he is a great American.

Here you are, Senator. [Applause, Senators rising.]

HEALTH PLANNING AND HEALTH SERVICES RESEARCH AND STATISTICS EXTENSION ACT

Mr. KENNEDY. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 4975.

The Presiding Officer laid before the Senate a message from the House of Representatives insisting upon its amendment to the amendment of the Senate to the bill (H.R. 4975) to amend the Public Health Service Act to authorize appropriations for fiscal year 1978 for biomedical research and related programs, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. KENNEDY. I move that the Senate disagree to the amendment of the House of Representatives and agree to the request of the House for a conference, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Messrs. KENNEDY, WILLIAMS, CRANSTON, PELL, NELSON, HATHAWAY, JAVITS, SCHWEIKER, and CHAFEE conferees on the part of the Senate.

APPOINTMENT OF ADDITIONAL CONFEREE—H.R. 4991

Mr. KENNEDY. Mr. President, I ask unanimous consent that Senator WILLIAMS be appointed a conferee on H.R. 4991.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. I thank the Chair.

U.S. INTERNATIONAL TRADE COMMISSION BUDGET AUTHORIZATION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of H.R. 6370, Calendar Order No. 101.

This measure has been cleared for action by unanimous consent.

The PRESIDING OFFICER (Mr. ANDERSON). The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 6370) to authorize appropriations to the International Trade Commission for fiscal year 1978, to provide for the Presi-

dential appointment of the chairman and vice chairman of the Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

There being no objection, the Senate proceeded to consider the bill (H.R. 6370) which had been reported from the Committee on Finance with an amendment to strike out all after the enacting clause and insert the following:

SECTION 1. AUTHORIZATION OF APPROPRIATIONS.

Subsection (e) of section 330 of the Tariff Act of 1930 (19 U.S.C. 1330(e)) is amended—

(1) by inserting "(1)" immediately before "For", and

(2) by adding at the end thereof the following new paragraphs:

"(2) There are authorized to be appropriated to the Commission for each fiscal year after September 30, 1977, in addition to any other amounts authorized to be appropriated for such fiscal year, such sums as may be necessary for increases authorized by law and salary, pay, retirement, and other employee benefits.

"(3) There are authorized to be appropriated to the Commission for the fiscal year ending September 30, 1978, $12,187,000.".

SEC. 2. ADMINISTRATIVE RESPONSIBILITY OF CHAIRMAN.

Subsection (a) of section 331 of such Act (19 U.S.C. 1331) is amended to read as follows:

"(a) ADMINISTRATION OF COMMISSION.—

The Chairman shall—

"(1) appoint and fix the compensation of such employees of the Commission as he deems necessary, including a secretary,

"(2) procure the services of experts and consultants in accordance with section 3109 of title 5, United States Code, and

"(3) exercise the executive and administrative functions of the Commission with respect to—

"(A) the supervision of personnel employed by, or assigned to, the Commission, except that each Commissioner may select and supervise personnel for his personal staff,

"(B) the distribution of cases, investigations, and other official matters among personnel employed by, or assigned to, the Commission, and

"(C) the use and expenditure of funds appropriated or made available to the Commission.

Any decision by the Chairman pursuant to the preceding sentence shall be subject to disapproval by a majority of the full Commission.".

SEC. 3. CONTINUATION OF REPORTS WITH RESPECT TO SYNTHETIC ORGANIC CHEMICALS.

The International Trade Commission is hereby directed to make during each calendar year ending before January 1, 1981, reports with respect to synthetic organic chemicals similar in scope to the reports made with respect to such chemicals for the calendar year 1976.

Mr. CURTIS. Mr. President, I voted to report this bill which authorizes $12,187,000 in appropriations for the International Trade Commission for fiscal year 1978. Additional sums are also authorized to be as are necessary for increases authorized by law in salary pay, and retirement benefits.

The bill approved by the House of Representatives made a change in the term of and method for designating the Chairman and Vice Chairman of the Commission. Rather than a rotating system, the President shall appoint the Chairman and Vice Chairman, by and with the advise and consent of the Senate, for a term of 3 years with a limit of two full terms for each Commissioner.

In addition, the House of Representatives provided that the Chairman of the Commission shall be responsible for administrative matters of the Commission, except that the Chairman shall be responsible for initiating and the Commission shall be responsible for approving and may initiate administrative action in the following areas: The employment and discharge of key personal, external relations, and the budget of the Commission.

The bill as reported by the Committee on Finance did not make extensive changes in the organization of the Commission. Nevertheless, the bill does provide that the Chairman is to be delegated full responsibility for all administrative matters subject to majority vote in opposition by Members.

Mr. President, it is my understanding that the Commission has been spending an inordinate amount of time on routine administrative matters instead of concentrating on the major substantive issues before the Commission. While I am hopeful that we can offer some guidance in this area, I am strongly opposed to giving the Commission Chairman the authority to resolve all administrative problems subject to a vote by four members of the Commission. This provision would, in effect, give the Chairman an extra vote on administrative issues.

Mr. President, the International Trade Commission has a vital role to play in the solution of our international economic issues and it is our responsibility to determine that the Commission operate as efficiently and effectively as possible. In this regard, I will support the requested authorization for the Commission budget for fiscal year 1978 and will also support a method for the Commission to expeditiously carry out routine administrative chores. However, Mr. President, I cannot support legislation which would grant extraordinary authority to the Commission Chairman.

Mr. ROBERT C. BYRD. I move the adoption of the committee amendment.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read:

An act to authorize appropriations to the United States International Trade Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–122), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

I. SUMMARY

The Committee on Finance amendment to H.R. 6370, which is in the nature of a substitute, is designed to achieve three objectives:

To authorize appropriation of $12,187,000 to the U.S. International Trade Commission for fiscal year 1978;

To provide for efficient administration of the Commission by making the Chairman, rather than the full Commission, responsible for administrative matters; and

To require reports by the Commission on synthetic organic chemicals until 1981.

II. REASONS FOR THE BILL

Section 175(b) of the Trade Act of 1974 amended section 330 of the Tariff Act of 1930 to require an annual authorization of appropriations to the U.S. International Trade Commission (ITC). The committee recognizes the increased responsibilities of the Commission under the Trade Act of 1974 and therefore believes the ITC fiscal year 1978 request for $12,187,000 is entirely justified.

The ITC is suffering from internal administrative problems, particularly personnel problems which have inhibited efficient administration and hurt employee morale. The committee believes these problems result from the inability of the Commissioners to agree among themselves and the cumbersome requirement that the full Commission act on all administrative matters. The committee is convinced the best way to end these problems is to give the Chairman of the ITC administrative authority subject to the disapproval of the full Commission.

III. GENERAL EXPLANATION

A. Budget authorization

Secion 1 of the House bill would provide an authorization of appropriations of $11,522,000 to the ITC for fiscal year 1978. This amount represents a $655,000 decrease from the Commission's budget request. The Ways and Means Committee report calls for decreases in self-initiated investigations, travel, and printing and reproduction costs.

Section 1 of the committee amendment authorizes appropriation of the full amount requested by the ITC. The committee believes this amount is entirely justified by the increased workload of the ITC resulting from changes in its responsibilities made under the Trade Act of 1974.

The ITC authorization for fiscal year 1978, $12,187,000, represents a dollar increase of $347,000, or 2.9 percent, over the appropriation for fiscal year 1977. Seventy-four percent, or $9.5 million, of the fiscal year 1978 request is for personnel. The budget request calls for 395 permanent employees, the same number as was budgeted for fiscal year 1977. The ITC currently has 359 employees.

The low number of actual employees results from the hiring freeze which the Commission imposed pending completion of its internal reorganization. Before the reorganization, the ITC was authorized to hire 426 permanent employees. Under the current reorganization plan, approximately 90 old positions will be abolished and 60 new positions will be created, resulting in a net reduction of 30 employees.

Changes in the ITC budget between fiscal year 1977 and 1978 are shown in the following table:

COMPARATIVE OBLIGATIONS, BY ACTIVITY

[In thousands of dollars]

Activities	Fiscal year 1976 actual	Increase or decrease, fiscal year 1977 from fiscal year 1976	Fiscal year 1977 estimate	Increase or decrease, fiscal year 1978 from fiscal year 1977	Fiscal year 1978 estimate

Less: Estimated reimbursements	32	−22	10		10
Net obligations	9,830	2,010	11,840	347	12,187

Note: Does not include transition quarter.

The committee does not agree with the limitations on Commissioners' personal staff in the House bill or the specific budget reductions recommended in the House report. In particular, the committee believes the ITC should continue to anticipate the information requirements of the Congress and the Executive by initiating investigations on its own motion. The committee does not believe Congress should attempt to regulate the day-to-day activities of the Commission. The committee believes Congress must rely upon the discretion of the Commissioners in the conduct of their official duties.

The committee expects the ITC to continue its efforts to realize savings through internal reorganization and the use of modern techniques in printing and information collection. The committee also expects the ITC to consult with the committee and the Ways and Means Committee to insure that the Commission's self-initiated studies meet the information requirements of the Congress.

B. Administration of the Commission

The House bill included changes relating to administration of the ITC. The House bill would require an individual appointed to the ITC to be knowledgeable about international trade. Present law requires such an individual to be capable of developing knowledge of international trade.

The House bill would require the President to appoint the Chairman and Vice Chairman for 3-year terms. Present law rotates those offices. Each Commissioner serves as Chairman during the last 18 months of his term as a Commissioner.

The House bill would give the Chairman administrative authority for all matters except the budget, external relations, and employment of "key personnel." Present law gives the entire Commission administrative authority for the ITC.

The committee amendment deletes the House provisions on qualifications for appointment to the ITC. The committee believes commonsense and intelligence are prerequisites for appointment to the ITC. The President should be free to select any individual who possesses these characteristics. He should not be limited to individuals who may, because of prior knowledge of the substantive issues before the ITC, have rigid opinions on international trade issues. Such individuals may be unable to make the objective, unbiased decisions required of an ITC Commissioner.

The committee amendment deletes the House provisions on administration of the ITC and inserts a new provision in section 2. The committee believes the administrative problems of the ITC will best be resolved by giving the Chairman administrative authority for the agency. Because many of the administrative problems arise over the budget and the employment of "key personnel," the committee believes the House provision would be a change without effect: Disputes over the most serious administrative problems would continue to consume the time of the full Commission. The authority the committee proposes to give the ITC Chairman is similar to that of the chairmen of many independent regulatory agencies, such as the Chairman of the Securities and Exchange Commission (see sec. 2 of the act entitled an "Act To Authorize the Securities and Exchange Commission to Delegate Certain Functions," Public Law No. 87-592, sec. 2 (Aug. 20, 1962) (15 U.S.C. 78d-2); 1950 Reorg. Plan No. 10 (15 Stat. 3175, 64 Stat. 1265) (15 USCA 78d note)).

The committee recognizes that a strong Chairman could dominate the other Commissioners on substantive issues. For that reason, the committee believes administrative decisions of the Chairman should be subject to disapproval by the full Commission and the chairmanship should continue to rotate Commissioners. This will insure that no individual and no political party can exercise undue influence over the Commissioners on substantive issues.

The committee expects the Commission to quickly conclude revision of its Policy Manual to establish regular procedures for administration of the ITC, consistent with the administrative role of the Chairman established in section 2 of the committee amendment.

C. Synthetic organic chemical reports

The ITC prepares and publishes reports on sales of synthetic organic chemicals and the raw materials from which they are produced, a directory of manufacturers of those products, statistics on imports of benzoid chemicals, and monthly statistical reports covering production of a selected list of synthetic organic chemicals considered to be representative of the industry. The House bill does not contain any provision on these reports; the committee amendment authorizes continuation of the reports through 1980.

The ITC proposed to continue publication of synthetic organic chemical reports during fiscal year 1978. However, the ITC asked for congressional guidance on the future of the reports. Although approximately 90 percent of the reports are distributed to the public, the committee understands that the reports are used by many Government agencies. The Office of the Special Representative for Trade Negotiations, in particular, requires the reports for the multilateral trade negotiations now underway in Geneva. The committee believes the ITC should continue publication of the synthetic organic chemical reports at least during the trade negotiations. Because the negotiating authority terminates in 1980, section 3 of the committee amendment requires publication until January 1, 1981.

IV. COST OF CARRYING OUT THE BILL

In compliance with section 252(a) of the Legislative Reorganization Act of 1970, the committee estimates the cost of carrying out this bill, as amended, will be $12,187,000 during fiscal year 1978 if the amount authorized is appropriated. The committee estimates the

cost of carrying out the bill during fiscal years 1979, 1980, and 1981 will be approximately $248,000 per year for the preparation of synthetic organic chemical reports. The committee expects savings to be realized from more efficient administration of the ITC if its amendment is enacted. The committee is not able to estimate the amount of these savings at this time.

In compliance with section 403 of the Congressional Budget Act of 1974, the Director of the Congressional Budget Office has submitted the following report to the committee:

CONGRESSIONAL BUDGET OFFICE—COST ESTIMATE

1. Bill number: H.R. 6370. Date: May 3, 1977.

2. Bill status: Reported by the Senate Committee on Finance.

3. Description of bill: This legislation amends the Tariff Act of 1930, as amended to:

Authorize to be appropriated for fiscal year 1978, $12.187 million to meet the expenses of the International Trade Commission;

Authorize to be appropriated such funds as may be necessary for increases in pay and employee benefits authorized by law for each fiscal year after September 30, 1977;

Define the administrative responsibility of the Chairman of the Commission; and

Continue reports with respect to synthetic organic chemicals.

4. Budget impact:

Budget function 152

	Millions
Fiscal year 1978:	
Authorization amounts	12.8
Estimated costs	11.9
Fiscal year 1979:	
Authorization amounts	.7
Estimated costs	1.5
Fiscal year 1980:	
Authorization amounts	.6
Estimated costs	.6
Fiscal year 1981:	
Authorization amounts	.7
Estimated costs	.7
Fiscal year 1982:	
Authorization amounts	.7
Estimated costs	.7

5. Basis for estimate: This estimate assumes enactment of this legislation on or before September 30, 1977, and is subject to subsequent appropriations. The allowances for pay and benefit increases are compounded on the fiscal year 1978 pay raise using current CBO economic assumptions.

Estimated costs are derived by applying historical outlay rates to the authorization amounts.

6. Estimate comparison: None.

7. Previous CBO estimate: An estimate was prepared for H.R. 6370, as reported by the House Committee on Ways and Means, on April 21, 1977. The bill passed by the House on April 25, 1977, authorized the appropriation of $11,522,000, or $665,000 less than authorized for appropriation in this legislation.

8. Estimate prepared by: Joseph C. Whitehill.

9. Estimate approved by: James L. Blum, Assistant Director for Budget Analysis.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene at 12:30 p.m. tomorrow.

After the two leaders or their designees have been recognized under the standing order, Mr. DECONCINI will be recognized for not to exceed 15 minutes, after which I will be recognized for not to exceed 15 minutes, after which the Senate will proceed to the consideration of S. 826, the Department of Energy Organization Act.

It is likely that the Senate will stay in until a reasonably late hour tomorrow and that it will come in reasonably early on Thursday, stay in reasonably late on Thursday evening, come in perhaps reasonably early on Friday, stay in reasonably late on Friday evening, and come in reasonably early on Saturday and stay in until a reasonably late hour on Saturday, which normally is a little different from a reasonably late hour on any other day of the week.

There will be rollcall votes tomorrow undoubtedly on amendments and on motions in relation to the Department of Energy bill.

Other measures may be taken up from time to time if they have been cleared for action.

Conference reports, being privileged matters, may be called up, and rollcall votes may occur.

RECESS TO 12:30 P.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 12:30 p.m. tomorrow.

The motion was agreed to; and, at 6:01 p.m., the Senate recessed until Wednesday, May 18, 1977, at 12:30 p.m.

NOMINATIONS

Executive nominations received by the Senate May 17, 1977:

DEPARTMENT OF STATE

Richard K. Fox, Jr., of Minnesota, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Trinidad and Tobago.

DEPARTMENT OF JUSTICE

Thomas P. Sullivan, of Illinois, to be U.S. attorney for the northern district of Illinois for the term of 4 years vice Samuel K. Skinner, resigning.

Robert L. Wright, of Kentucky, to be U.S. marshal for the western district of Kentucky for the term of 4 years vice Jesse W. Grider, resigned.

James G. Barton, of Texas, to be U.S. marshal for the eastern district of Texas for the term of 4 years vice J. Keith Gary, resigned.

Joseph J. Harvey, of Washington, to be U.S. marshal for the western district of Washington for the term of 4 years vice Charles E. Robinson, resigning.

HOUSE OF REPRESENTATIVES—*Tuesday, May 17, 1977*

The House met at 12 o'clock noon.

Rev. Joseph M. Smith, director, Ministries in Higher Education, District of Columbia Baptist Convention, offered the following prayer:

O Lord, our Lord, how excellent is Thy name in all the Earth!

We praise Thee for implanting a sense of purpose within our hearts; we give Thee thanks for Thy indwelling spirit, luring us forward. Indeed Thou art a God who does not hide from us, but who gives us a renewed spirit.

Yet we also confess that we do lose sight of Thy calling, that even while we suppose that we do well, we are caught in self-interest.

Deliver, then, our Nation from causes too small to challenge us. Grant to this House fresh insight into Thy will; give them compassion for the needs of all Thy children; and endow them with the courage which will fill us all with hope.

In Thy power alone we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on May 13, 1977, the President approved and signed bills of the House of the following titles:

H.R. 11. An act to increase the authorization for the Local Public Works Capital Development and Investment Act of 1976.

H.R. 4876. An act making economic stimulus appropriations for the fiscal year ending September 30, 1977, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3477) entitled "An act to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform," and that the Senate agreed to House amendment to Senate amendment numbered 85 to the foregoing bill.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 3437. An act to make certain technical and miscellaneous amendments to provisions relating to vocational education contained in the Education Amendments of 1976.

The message also announced that the Senate had passed a joint resolution of the following title, in which the concurrence of the House is requested:

S.J. Res. 24. Joint resolution to authorize and request the President to issue annually a proclamation designating the first Sunday of September after Labor Day of each year as "National Grandparents Day".

LEONARD WOODCOCK

(Mr. BRADEMAS asked and was given permission to address the House for 1

minute, to revise and extend his remarks and include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, when Leonard Woodcock retires this week after more than 40 years with the United Auto Workers he will embark on two new careers—as a distinguished elder statesman of the American labor movement and the prospective new envoy from the United States to the People's Republic of China.

As cochairman of the congressional delegation which visited the People's Republic of China only last month, I can say that I am all the more sensitive to the great importance of this appointment. In selecting Leonard Woodcock to fill our chief diplomatic post in the world's most populous nation, President Carter has chosen a tough and skillful negotiator for the delicate task of moving toward normalization of our relations with that country. This will be Mr. Woodcock's second diplomatic mission to Asia this year. Last March, as the President's special representative, he led a five-member commission to Vietnam and Laos and returned with significant new information on the status of Americans missing in action during the Vietnam conflict.

Leonard Woodcock began his multifaceted career as a machine assembler at the Detroit Gear & Machine Co. before joining the United Auto Workers. He served as a member of a UAW local and on the staff of a union regional office before moving up in 1946 to become administrative assistant to UAW President Walter Reuther. In 1955 he became international vice president and succeeded to the UAW presidency upon Reuther's death in 1970. During a 7-year stewardship, he continued the UAW tradition of concern with domestic social programs and Leonard Woodcock served as the conscience of the labor movement in advocating opposition to further involvement in the Vietnam war.

Mr. Speaker, working Americans of all political persuasions can be grateful to Leonard Woodcock for his many efforts in their behalf over the years. His interests have transcended narrow issues of labor and management to address the vital concerns of the Nation. As a spokesman for human rights and social justice, Leonard Woodcock will find ample scope for his many talents in his new role of full-time diplomat.

DR. JOSEPH M. SMITH

(Mr. MAZZOLI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MAZZOLI. Mr. Speaker, I would like to commend Dr. Joseph M. Smith who delivered such a fine invocation at the beginning of today's session.

Dr. Smith is a native of my home of Louisville and has had a most distinguished career. He received his B.A. from the University of Louisville in 1960 and then went on to receive his doctor of divinities and doctor of ministries from the Southern Baptist Theological School in Louisville.

Since that time Dr. Smith has devoted his considerable skills and energies to the service of education. He has been the chaplain at five different schools including the University of Kentucky and Berea College.

Dr. Smith is now director of the Ministry for Higher Education of the District of Columbia Baptist Convention.

I also thank you, Mr. Speaker, for your courtesy in allowing Dr. Smith to offer today's prayer.

POSTAL REFORMS OF 1970 HAVE FAILED MISERABLY

(Mr. HAGEDORN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAGEDORN. Mr. Speaker, I am sure that I will not be alone in condemning the proposal of the Postal Service to simultaneously increase postal rates by up to 23 percent while eliminating Saturday mail deliveries. It is clear to most everybody now that the postal reforms of 1970 have failed miserably.

They have deprived Congress of any meaningful opportunity to oversee the operations of the postal system while yielding no counterbalancing economies. In effect, we have achieved the worst of two worlds: An enterprise completely independent of both public supervision and the constraints of the marketplace. The Postal Service is simply unaccountable to the public as either taxpayers or consumers. Despite repeated references to the quasibusinesslike aspects of the Postal Service, the hard fact remains that the service is free from competition in most respects and has few real incentives to manage its affairs in an efficient manner.

The Postal Service today is the largest single employer in the Nation, employing 700,000 individuals or nearly three-fourths of 1 percent of the entire work force in this Nation. Eighty-five percent of the total postal budget goes toward the salaries of this immense labor force, salaries which are tied to what is perhaps the most liberal cost-of-living escalator in either the public or private sector. It is no great mystery where economies are going to have to be achieved if accelerating postal costs are going to be checked.

While not necessarily the ultimate solution, I believe that Congress must reassert full supervision over the postal system and end the Postal Service mockery. At the same time, it is unreasonable to expect that renewed legislative supervision will result in any major efficiencies in the delivery of mail in this country. Likely, the system will operate the same total cost except that it will be borne, to a greater extent, by the taxpayer.

While insuring that any longer range reforms protect the interests of all segments of America, including otherwise isolated rural users, I believe that it is about time that we in Congress started considering new ways to structure postal delivery in this country.

GOVERNING INTERNATIONAL FISHERY AGREEMENT BETWEEN UNITED STATES AND CUBA—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC NO. 45–157)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94–265), I transmit herewith a governing international fishery agreement between the United States and Cuba, signed at Havana on April 27, 1977.

This Agreement, one of a series to be negotiated in accordance with that legislation, is significant because it is the first to be negotiated personally by representatives of the two governments since 1958. Favorable action by Congress on this Agreement will constitute a tangible step in the improvement of United States-Cuban relations.

In that regard I note that the Fishery Conservation and Management Act provides for 60 calendar days of continuous session for review of the Agreement by Congress. Since the Agreement in all material aspects is in accordance with the provisions of the Act, I strongly recommend that the Congress consider extending the provisions of the Fishery Conservation Zone Transition Act (P.L. 95–6) to this Agreement in order that it may be brought into force at the earliest possible date.

JIMMY CARTER.

THE WHITE HOUSE, *May 17, 1977.*

PRINTING OF REPORT ON H.R. 7171, AGRICULTURAL ACT OF 1977

Mr. FOLEY. Mr. Speaker, I offer a resolution (H. Res. 574) and ask unanimous consent for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 574

Resolved, That there shall be printed for the use of the Committee on Agriculture of the House of Representatives the maximum number of copies of the House report to accompany the bill (H.R. 7171) and entitled the "Agricultural Act of 1977" which may be printed at a cost not to exceed $1200.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON CAPITAL, INVESTMENT AND BUSINESS OPPORTUNITIES TO SIT TOMORROW, WEDNESDAY, MAY 18, 1977

Mr. LAFALCE. Mr. Speaker, since we will be starting our House session at

10 a.m. tomorrow, Wednesday, May 18, 1977, I ask unanimous consent that the Subcommittee on Capital, Investment, and Business Opportunities of the Committee on Small Business be granted permission to conduct hearings previously scheduled for tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

JENNET JUANITA MILLER

The Clerk called the bill (H.R. 1405) for the relief of Jennet Juanita Miller.

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

DIMITRIOS PANOUTSOPOULOS, ANGELIKI PANOUTSOPOULOS, AND GEORGIOS PANOUTSOPOULOS

The Clerk called the bill (H.R. 1940) for the relief of Dimitrios Panoutsopoulos, Angeliki Panoutsopoulos, and Georgios Panoutsopoulos.

There being no objection, the Clerk read the bill, as follows:

H.R. 1940

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Dimitrios Panoutsopoulos, Angeliki Panoutsopoulos, and Georgios Panoutsopoulos shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PATRICIA R. TULLY

The Clerk called the bill (H.R. 2661) for the relief of Patricia R. Tully.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

CHRISTOPHER ROBERT WEST

The Clerk called the bill (H.R. 2662) for the relief of Christopher Robert West.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MRS. CHONG SUN YI RAUCH

The Clerk called the bill (H.R. 3081) for the relief of Mrs. Chong Sun Yi Rauch.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from California?

MILOS FORMAN

The Clerk called the bill (H.R. 3085) for the relief of Milos Forman.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

FIDEL GROSSO-PADILLA

The Clerk called the bill (H.R. 3090) for the relief of Fidel Grosso-Padilla.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

OLIVE M. V. T. DAVIES AND HER CHILDREN

The Clerk called the bill (H.R. 3215) for the relief of Olive M. V. T. Davies and her children.

There being no objection, the Clerk read the bill, as follows:

H.R. 3215

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act (8 U.S.C. 1101 et seq.), Olive M. V. T. Davies and her children, Samira D. K. Davies, Ola-Tomi K. Davies, Ola-Yinka K. Davies, Ilesha E. K. Davies, and Baba-Tunji K. Davies, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees.

SEC. 2. Upon the granting of permanent residence under the first section of this Act to the individuals specified in such section, the Secretary of State shall instruct the proper officer to deduct the required numbers from the total number of immigrant visas and conditional entries which are made available under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act (8 U.S.C. 1153(a)) to natives of the country of each such individual's birth.

With the following committee amendment:

On page 1, line 7 after "can considered" strike out the remainder of the bill and insert in lieu thereof the following: "to be within the purview of section 203(a)(2) of that Act and the provisions of section 204 of the Act shall be inapplicable in their cases."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed.

The title was amended so as to read: "For the relief of Mrs. Olive M. V. T. Davies and her children, Samira D. K. Davies, Ola-Tomi K. Davies, Ola-Yinka E. Davies, Ilesha E. K. Davies, and Baba-Tunji K. Davies."

A motion to reconsider was laid on the table.

MARIE GRANT

The Clerk called the bill (H.R. 1427) for the relief of Marie Grant.

There being no objection, the Clerk read the bill, as follows:

H.R. 1427

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for purposes of determining entitlement to a survivor annuity under section 8341 of title 5, United States Code, Marie Grant of Chicago, Illinois, is deemed to have met the requirements of subsection (a)(1) of such section.

SEC. 2. For purposes of chapter 83 of title 5, United States Code, any entitlement of Marie Grant to a survivor annuity by reason of the first section of this Act shall be effective as of August 26, 1969, the day after the date of death of her husband, Nathaniel Grant, Junior. The aggregate amount to which Marie Grant is so entitled for the period before the date of the enactment of this Act shall be paid in a lump sum.

With the following committee amendment:

On Page 1, line 6, strike "(a)" and insert in lieu thereof "(b)".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

VELZORA CARR

The Clerk called the bill (H.R. 2563) for the relief of Velzora Carr.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

WILLIAM J. ELDER AND THE ESTATE OF STEPHEN M. OWENS, DECEASED

The Clerk called the bill (H.R. 3460) for the relief of William J. Elder and the estate of Stephen M. Owens, deceased.

The Clerk read the bill, as follows:

H.R. 3460

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That each of the following-named persons is relieved of all liability to repay the United States the amount which appears beside his name:

William J. Elder, $1,143.37.

The estate of Stephen M. Owens, deceased, $231.25. Such amounts represent overpayments of travel, transportation, and other related expenses made, as a result of an ad-

ministrative error to the above-named civilian employees of the Department of the Navy during the years 1974 and 1975. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for amounts for which liability is relieved by this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GARY DAVES AND MARC CAYER

The Clerk called the bill (H.R. 4533) for the relief of Gary Daves and Marc Cayer.

There being no objection, the Clerk read the bill, as follows:

H.R. 4533

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, $29,241.45 to Gary Daves of Albuquerque, New Mexico, and $25,869.47 to Marc Cayer of Quebec, Canada, for the period of their imprisonment in Southeast Asia which commenced while both Mr. Daves and Mr. Cayer were employed (as volunteers) by International Voluntary Services Incorporated pursuant to a Government contract between the Agency for International Development and International Voluntary Services Incorporated (AID/W235). Such compensation shall be in addition to that received by Mr. Daves pursuant to the provisions of the War Claims Act of 1948 (50 App. U.S.C. 2001 et seq.), and by both Mr. Daves and Mr. Cayer pursuant to the provisions of the War Hazards Compensation Act of 1942 (42 U.S.C. 1701 et seq.).

SEC. 2. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim. Any person violating this section shall be fined not more than $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COMMANDER EDWARD WHITE RAWLINS, U.S. NAVY (RETIRED)

The Clerk called the bill (H.R. 1445) for the relief of Commander Edward White Rawlins, U.S. Navy (retired).

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

LILIA ARAUJO

The Clerk called the bill (H.R. 1406) for the relief of Lilia Araujo.

There being no objection, the Clerk read the bill as follows:

H.R. 1406

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Lilia Araujo may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Mr. and Mrs. Rafael Araujo, citizens of the United States, pursuant to section 204 of the Act. The natural parents or brothers or sisters of Lilia Araujo shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

UMBERTO RUFFOLO

The Clerk called the bill (H.R. 1420) for the relief of Umberto Ruffolo.

There being no objection, the Clerk read the bill, as follows:

H.R. 1420

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions of section 212(a)(1) of the Immigration and Nationality Act, Umberto Ruffolo may be issued a visa and admitted to the United States if he is found otherwise admissible under the provisions of this Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act: *And provided further,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. DESOLINA SCIULLI

The Clerk called the bill (H.R. 1432) for the relief of Mrs. Desolina Sciulli.

There being no objection, the Clerk read the bill, as follows:

H.R. 1432

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Mrs. Desolina Sciulli may be issued a visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SOO JIN LEE

The Clerk called the bill (H.R. 1437) for the relief of Soo Jin Lee.

There being no objection, the Clerk read the bill, as follows:

H.R. 1437

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Soo Jin Lee may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. John H. Aleshire, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

SEC. 2. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. ANGELITA SHORT

The Clerk called the bill (H.R. 1428) for the relief of Mrs. Angelita Short.

There being no objection, the Clerk read the bill, as follows:

H.R. 1428

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mrs. Angelita Short of Chicago, Illinois, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, in the administration of the Immigration and Nationality Act, Mrs. Angelita Short, the widow of a citizen of the United States, shall be deemed to be an immediate relative within the meaning of section 201(b) of such Act, and the provisions of section 204 of that Act shall not be applicable in this case."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ABDELAH AHMED CHRAYAH

The Clerk called the bill (H.R. 1750) for the relief of Abdelah Ahmed Chrayah.

There being no objection, the Clerk read the bill, as follows:

H.R. 1750

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Abdelah Ahmed Chrayah shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available

to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, for the purposes of sections 203(a)(1) and 204 of the Immigration and Nationality Act, Anthony Rogers shall be held and considered to be the natural-born alien son of Mr. Charles Rogers, a citizen of the United States: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Anthony Rogers."

A motion to reconsider was laid on the table.

JOSEPH LEE SORYUNG

The Clerk called the bill (H.R. 1936) for the relief of Joseph Lee Soryung.

There being no obligation, the Clerk read the bill, as follows:

H.R. 1936

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Joseph Lee Soryung may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, and a petition filed in his behalf by Mr. and Mrs. Douglas Dix, citizens of the United States, may be approved pursuant to section 204 of the Act. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

With the following committee amendments:

On page 1, line 4, strike out the name "Joseph Lee Soryung" and substitute the name "Lee So Ryung".

On page 1, line 8, strike out the word "Act." and insert in lieu thereof the following: "Act: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Lee So Ryung."

A motion to reconsider was laid on the table.

RUBEN P. DIN

The Clerk called the bill (H.R. 2253) for the relief of Ruben P. Din.

There being no objection, the Clerk read the bill, as follows:

H.R. 2253

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Ruben P. Din may be classified as a child within the meaning of section 101(b)(1)(E) of the Act, upon approval by a petition filed in his behalf by Staff Sergeant and Mrs. Neal R. Olmstead, a citizen of the United States and an alien, respectively, pursuant to section 204 of the Act: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

YOUNG GUN KIM

The Clerk called the bill (H.R. 2553) for the relief of Young Gun Kim.

There being no objection, the Clerk read the bill, as follows:

H.R. 2553

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Young Gun Kim may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Roger D. Taylor, citizens of the United States, pursuant to section 204 of the Act: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MEEJA SA FOSTER

The Clerk called the bill (H.R. 3217) for the relief of Meeja Sa Foster.

There being no objection, the Clerk read the bill, as follows:

H.R. 3217

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Meeja Sa Foster may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in her behalf by Lieutenant Colonel William R. and Brenda Foster, citizens of the United States, pursuant to section 204 of the Act: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

SEC. 2. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARK CHARLES MIEIR AND LIANE MARIA MIEIR

The Clerk called the bill (H.R. 3313) for the relief of Mark Charles Mieir and Liane Maria Mieir.

There being no objection, the Clerk read the bill, as follows:

H.R. 3313

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Mark Charles Mieir and Liane Maria Mieir may be classified as children within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in their behalf of Mr. and Mrs. Charles Mieir, citizens of the United States, pursuant to section 204 of the Act: *Provided*, That the natural parents or brothers or sisters of the beneficiaries shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HEE KYUNG YOO

The Clerk called the bill (H.R. 4246) for the relief of Hee Kyung Yoo.

There being no objection, the Clerk read the bill, as follows:

H.R. 4246

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Hee Kyung Yoo may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Donald Weicht, citizens of the United States, pursuant to section 204 of the Act: *Provided*, That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, at the end of the bill, insert the following sentence: "Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that further reading of the Private Calender be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

TRANSMITTAL OF THE 26TH ANNUAL REPORT OF THE JOINT COMMITTEE ON DEFENSE PRODUCTION

Mr. MITCHELL of Maryland. Mr. Speaker, in accordance with section 712

(B) of the Defense Production Act of 1950, as amended, there is transmitted herewith the 26th annual report of the Joint Committee on Defense Production. I am filing this report on behalf of Leonor K. Sullivan, who before her retirement at the close of the 94th Congress, was chairman of the joint committee.

This report comprises two volumes, the first being information on the activities of the joint committee in 1976, results of committee studies, and such recommendations as it deemed desirable. The second volume contains information on programs carried on by departments and agencies performing functions under authority of the Defense Production Act for fiscal year 1976.

The report reveals the aggressive, close-in oversight activities which the joint committee carried out in the 94th Congress. During 1976, for example, the committee chose to concentrate on reviewing the condition of Federal emergency preparedness and mobilization policies, programs, and organizations, and examining the development of Federal materials policy in terms of its implications for the availability of materials for defense purposes.

I know that this report will be of especial interest to many Members of this body. I hope they will give it the close reading which it deserves.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement.

Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated, and after those motions to be determined by "nonrecord" votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATION PROJECTS ACT OF 1977

Mr. HAWKINS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6138) to provide employment and training opportunities for youth, as amended.

The Clerk read as follows:

H.R. 6138

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Youth Employment and Innovative Demonstration Projects Act of 1977".

TITLE I—YOUNG ADULT CONSERVATION CORPS

SEC. 101. This title may be cited as the "Young Adult Conservation Corps Act".

SEC. 102. The Act entitled "An Act to establish a pilot program in the Department of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes", enacted August 13, 1970 (84 Stat. 794; as amended, 16 U.S.C. 1701–1706) (hereafter in this Act referred to as the Youth Conservation Corps Act) is amended by adding at the end thereof the following new title:

"TITLE II—YOUNG ADULT CONSERVATION CORPS

"STATEMENT OF PURPOSE

"SEC. 201. The purpose of this title is to complement the Youth Conservation Corps and to provide employment and other benefits to young adults while reducing the inventory of conservation work and completing many other projects of a public nature on the lands and waters of the United States. This title supplements and extends the provisions of title I of this Act and does not limit or repeal any existing authority provided by title I of this Act.

"EXTENSION OF YOUTH CONSERVATION CORPS

"SEC. 202. The Secretary of the Interior and the Secretary of Agriculture (hereinafter in this title referred to as the 'Secretaries') shall jointly extend the Youth Conservation Corps so as to make possible the year-round employment of young adults. Section 102 of this Act applies to the extended Corps under this title, except that individuals employed as Corps members under this title—

"(1) shall be referred to the Secretaries by agencies affiliated with the United States Employment Service, prime sponsors qualifying under section 102 of the Comprehensive Employment and Training Act of 1973 and other agencies according to interagency agreements entered into with the Secretary of Labor;

"(2)(A) shall at the time of enrollment have attained age nineteen but not attained age twenty-four or (B) shall have attained age sixteen (or completed high school) but not attained age nineteen, in the case of individuals who have left school and who give adequate assurances, under criteria established by the Secretaries, that they did not leave school for the purpose of obtaining employment under this title;

"(3) shall be physically capable, as determined under regulations established by the Secretaries, to carry out the work of the Corps;

"(4) shall be given preference for employment if they reside in areas of substantial unemployment as defined in section 204(c) of the Comprehensive Employment and Training Act of 1973;

"(5) may be employed for a total period of not more than twelve months, with such maximum employment period consisting of one continuous twelve-month period or of two or more periods which together total twelve months; and

"(16) shall be unemployed at the time of enrollment.

"SECRETARIAL DUTIES AND FUNCTIONS

"SEC. 203. (a) Section 103 of this Act, relating to the duties and functions of the Secretaries, applies to this title, except that in administering this title the Secretaries shall—

"(1) place individuals employed as Corps members into jobs which will diminish the backlog of relatively labor intensive projects which would otherwise be carried out if adequate funding were made available;

"(2) employ such individuals in such projects as but not limited to—

"(A) tree nursery operations, planting, pruning, thinning, and other silvicultural measures;

"(B) erosion control and flood damage, and other natural disaster measures;

"(C) wildlife habitat and fisheries habitat improvements and preservation;

"(D) range management improvements;

"(E) recreation development, rehabilitation, and maintenance;

"(F) forest insect and disease control, road and trail improvements, and wildlife preservation; and

"(G) general sanitation, cleanup, and maintenance of State and public lands;

"(3) in determining appropriate work projects for Corps members, give priority to projects that—

"(A) are relatively labor intensive;

"(B) have work plans or for which work plans could be readily developed;

"(C) may be initiated promptly; and

"(D) are productive;

"(4) to the maximum extent practicable employ such individuals in areas where existing residential facilities are available;

"(5) to the maximum extent practicable employ such individuals in activities similar to activities of those employed in seasonal and part-time employment, in the case of the Secretary of the Interior, in the National Park Service, Bureau of Outdoor Recreation, the United States Fish and Wildlife Service, the Bureau of Reclamation, the Bureau of Land Management, and the Bureau of Indian Affairs, and, in the case of the Secretary of Agriculture, in the Forest Service and the Soil Conservation Service;

"(6) determine rates of pay which shall be at least at the wage required by section 6(a)(1) of the Fair Labor Standards Act of 1938; and

"(7) provide for the safety, health, and welfare of Corps members.

"(b) Whenever economically feasible, existing but unoccupied or underutilized Federal, State, and local government facilities, and equipment of all types, shall be utilized for the purposes of the Corps where appropriate, with the approval of the Federal, State, or local agency or government involved.

"(c) The Secretaries, in carrying out the purpose of this title, shall work with the Department of Health, Education, and Welfare to make suitable arrangements whereby academic credit may be awarded by educational institutions and agencies for competencies derived from work experience obtained through programs established under this title.

"EXTENSION OF GRANT PROGRAM FOR STATE PROJECTS

"SEC. 204. (a) The Secretaries shall jointly extend the grant program for State projects required by section 104 of this Act so as to provide increased employment to young adults to develop, preserve, and maintain non-Federal (including State and local) public lands and waters within the States, as defined in section 104(a) (and such employment may include employment on projects which assist the selective cutting and thinning of timber on such lands for essential fuel purposes). For the purpose of this section 'local' includes any political subdivision of the State. Sections 104 (a), (b), and (c) of this Act apply to the extended grant program for State projects under this title, except that for the purposes of this title, each grant application shall contain assurances satisfactory to the Secretaries that individuals employed under the project for which the application is submitted (1) meet the qualifications set forth in section 202, (2) shall be paid wages in accordance with section 203(a)(6), and (3) that the activities funded—

"(A) will result in an increase in employment opportunities over those opportunities which would otherwise be available,

"(B) will not result in the displacement of currently employed workers (including partial displacement such as reduction in the hours of nonovertime work or wages or employment benefits),

"(C) will not impair existing contracts for

services or result in the substitution of Federal for other funds in connection with work that would otherwise be performed,

"(D) will not substitute jobs assisted under this title for existing federally assisted jobs, and

"(E) will not result in the hiring of any youth when any other person is on layoff from the same or any substantially equivalent job.

"(b) Not more than 30 per centum of the sums appropriated to carry out this title for any fiscal year shall be made available for grants under this section for such fiscal year and shall be made on the basis of total youth population within each State.

"(c) Each of the Secretaries shall enter into an agreement with the Secretary of Labor with respect to the administration of the provisions of subsection (a)(3).

"SECRETARIAL REPORTS

"SEC. 205. The Secretaries shall prepare jointly and submit to the President and the Congress a report detailing the activities carried out under this title for each fiscal year. Such report shall be submitted not later than February 1 of each year following the date of enactment of this Act. The Secretaries shall include in such report such recommendations as they deem appropriate.

"APPLICATION OF PROVISIONS OF FEDERAL LAW

"SEC. 206. Except as otherwise specifically provided in the following paragraphs of this section, Corps members shall not be deemed Federal employees and shall not be subject to the provisions of law relating to Federal employment including those regarding hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits:

"(1) For purposes of the Internal Revenue Code of 1954 (26 U.S.C. 1 et seq.) and title II of the Social Security Act (42 U.S.C. 401 et seq.), Corps members shall be deemed employees of the United States and any service performed by a person as a Corps member shall be deemed to be performed in the employ of the United States.

"(2) For purposes of subchapter 1 of chapter 81 of title 5 of the United States Code, relating to compensation to Federal employees for work injuries, Corps members shall be deemed civil employees of the United States within the meaning of the term 'employee' as defined in section 8101 of title 5, United States Code, and provisions of that subchapter shall apply, except that the term 'performance of duty' shall not include any act of a Corps member while absent from his or her assigned post of duty, except while participating in an activity (including an activity while on pass or during travel to or from such post of duty) authorized by or under the direction and supervision of the Secretary.

"(3) For purposes of chapter 171 of title 28 of the United States Code, relating to tort claims procedure, Corps members shall be deemed civil employees of the United States within the meaning of the term 'employee of the Government' as defined in section 2671 of title 28, United States Code, and provisions of that chapter shall apply.

"(4) For purposes of section 5911 of title 5 of the United States Code, relating to allowances for quarters, Corps members shall be deemed civil employees of the United States within the meaning of the term 'employee' as defined in that section, and provisions of that section shall apply.

"ANTIDISCRIMINATION

"SEC. 207. (a) No persons with responsibilities in the operations of such programs will discriminate with respect to any program participant or any applicant for participation in such program because of race, creed, color, national origin, sex, political affiliation, or beliefs;

"(b) The Corps shall be open to youth from all parts of the country of both sexes and youth of all social, economic, and racial classifications.

"INTERAGENCY AGREEMENTS

"SEC. 208. The administration of this title shall be pursuant to interagency agreements entered into by the Secretary of Labor with the Secretaries.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 209. There are authorized to be appropriated such sums as may be necessary for the fiscal year beginning October 1, 1977, and for each of the two succeeding fiscal years, for the purpose of carrying out this title."

SEC. 103. The Youth Conservation Corps Act is further amended by—

(1) inserting immediately after the enacting clause the following:

"TITLE I—YOUTH CONSERVATION CORPS";

(2) redesignating sections 1 through 6 as sections 101 through 106, respectively;

(3) striking out "section 6" in section 104(d) (as redesignated by clause 2 of this section) and inserting in lieu thereof "section 103"; and

(4) striking out "Act" each place it appears in sections 101 through 106 (as redesignated by clause 2 of this section) and inserting in lieu thereof "title".

TITLE II—YOUTH INNOVATIVE DEMONSTRATION PROJECTS ACT

SEC. 201. This title may be cited as the "Youth Innovative Demonstration Projects Act of 1977".

SEC. 202. Title III of the Comprehensive Employment and Training Act of 1973, as amended, is amended by adding at the end thereof the following new part:

PART C—YOUTH INNOVATIVE DEMONSTRATION PROJECTS

"STATEMENT OF PURPOSE

"SEC. 316. It is the purpose of this part to establish pilot, demonstration, and experimental programs to explore methods of dealing with the structural unemployment problems faced by this Nation's youth. The basic purpose of these programs shall be to test the relative efficacy of different ways of dealing with these problems in different local contexts but this basic purpose shall not preclude the funding of programs dealing with the immediate difficulties faced by youth who are in need of, and unable to find a job. It is explicitly not the purpose of this part to provide make-work opportunities for unemployed youth; instead, it is the purpose to provide youth, and particularly economically disadvantaged youth, with opportunities to learn and earn that will lead to meaningful employment opportunities after they have completed the program.

"USE OF FUNDS

"SEC. 317. Twenty-five per centum of the funds available for carrying out this part shall be available only for carrying out section 318, and the remainder shall be available for carrying out section 319.

"YOUTH INCENTIVE ENTITLEMENT

"SEC. 318. (a) The Secretary shall enter into arrangements with prime sponsors selected in accordance with the provisions of this section for the purpose of demonstrating the efficacy of guaranteeing otherwise unavailable part-time employment, or combination of part-time employment and training, for economically disadvantaged youth between the ages of sixteen and nineteen, inclusive, during the school year who resume or maintain attendance in secondary school for the purpose of acquiring a high school diploma or in a program which leads to a certificate of high school equivalency and full-time employment or part-time employment and training during the summer months to each such youth.

"(b) Each prime sponsor who applies for and is selected by the Secretary to carry out a pilot program under this section shall guarantee such employment to each such unemployed youth who resides within the area or a designated part thereof served by the prime sponsor and who applies to that prime sponsor for employment, and the Secretary shall provide to each prime sponsor, from funds appropriated for carrying out this section, in combination with any funds made available by such prime sponsor according to an agreement made pursuant to subsection (e)(4)(E) of this section, the amount to which that prime sponsor is entitled under subsection (c).

"(c) Each prime sponsor shall be entitled to receive, for each youth who is provided employment by that prime sponsor, the costs associated with providing such employment. Such costs shall take into account funds made available by such prime sponsor under subsection (e)(4)(E).

"(d) Employment opportunities guaranteed under this section shall take the form of any one of the following or combination thereof:

"(1) part-time employment or training or combination thereof during the school year, not to exceed twenty hours per week for each youth employed, and not to last less than six months nor more than nine, on projects operated by community-based organizations of demonstrated effectiveness which have a knowledge of the needs of disadvantaged youth; local educational agencies (as defined in section 801(f) of the Elementary and Secondary Education Act of 1965); institutions of higher education (as defined in section 1201(a) of the Higher Education Act of 1965); nonprofit private organizations or institutions engaged in public service; nonprofit voluntary youth organizations; nonprofit private associations, such as labor organizations, educational associations, business, cultural, or other private associations; units of general local government; or special purpose political subdivisions either having the power to levy taxes and spend funds or serving such special purpose in two or more units of general local government;

"(2) part-time employment on an individual basis in any of the institutions and under the same conditions provided for in clause (1);

"(3) part-time employment on either a project or individual basis in any of the institutions and under the same conditions as provided in clause (1) which includes as part of the employment on-the-job or apprenticeship training;

"(4) full-time employment during the summer months, not to exceed forty hours per week for each youth employed, and not to last less than eight weeks, in any of the institutions described in clause (1).

"(e) In selecting prime sponsors to operate a youth incentive entitlement project, the Secretary shall—

"(1) select prime sponsors from areas with differing socioeconomic and regional circumstances such as differing unemployment rates, school dropout rates, urban and rural variations, size, and other such factors designed to test the efficacy of a youth job entitlement in a variety of differing locations and circumstances;

"(2) take into consideration the extent to which the prime sponsors devote funds made available under title I and section 304(a)(1), (2), and (3) of this Act for the purpose of carrying out a youth incentive entitlement program or for supportive services;

"(3) take into consideration the extent to which new and different classifications, occupations, or restructured jobs are created for youth;

"(4) not select any prime sponsor failing to submit a proposal which includes—

"(A) a description of the procedure to be utilized by the prime sponsor to publicize, consider, approve, audit, and monitor youth incentive projects or jobs funded by the prime sponsor under this part, including copies of proposed application materials, as well as examples of audit and client characteristics reports;

"(B) a statement of the estimated number of economically disadvantaged youth to be served by the prime sponsor, and assurances that only such disadvantaged youth will be served;

"(C) assurances that, if new and different classifications, occupations, or restructured jobs are created under section 318(e)(3) and are covered under section 208(a)(2) of this Act, prime sponsors have entered into agreements with employers and any labor organizations representing employees engaged in similar work in the same area with respect to the establishment of such new and different classifications, occupations, or restructured jobs;

"(D) assurances that the prime sponsor has consulted with public and private nonprofit local educational agencies including vocational and postsecondary education institutions and other agencies which offer high school equivalency programs; public employers, including law enforcement and judicial agencies; labor organization; voluntary youth groups; community-based organizations; organizations of demonstrated effectiveness with a special knowledge of the needs of such disadvantaged youth; and with the private sector in the development of the plan, and that arrangements are made with appropriate groups to assist the prime sponsor in carrying out the purposes of this section;

"(E) assurances that arrangements are made with the State employment security agencies to carry out the purposes of this section;

"(F) an agreement that title I funds planned for economically disadvantaged youth employment programs and funds available for the summer youth program under section 304 for youth eligible under subsection (a) will be used in support of the program authorized under this section;

"(G) assurances that the employment of eligible youth meets the requirements of eligible activities under subsection (f);

"(H) Assures that participating youth shall not be employed more than twenty hours per week during the school year and not more than forty hours per week during the summer;

"(I) assures that a participating youth is not a relative of any person with responsibility for hiring a person to fill that job;

"(J) assurances that youth between the ages of sixteen and nineteen, inclusive, employed thereunder shall be paid wages which shall not be lower than the higher of (i) the minimum wage specified in section 6(a)(1) of the Fair Labor Standards Act of 1938 or (ii) the State or local minimum wage for the most nearly comparable covered employment; except when such employment involves additional on-the-job, institutional, or apprenticeship training provided by the employer, and if such training is not paid for in full or in part by the prime sponsor under any other program authorized under this Act, wages may be paid in accordance with the provisions of section 14(b) of the Fair Labor Standards Act of 1938, and with the balance being applied to the cost of training;

"(K) assures that arrangements have been made with the appropriate local education agency or with the institution offering a certified high school equivalency program to assure that such youth is enrolled and meeting the minimum academic and attendance requirements of that school or education program and with employers to assure that such youth meet the minimum work and attendance requirements of such employment and that any employment guarantee is conditioned on such enrollment; and

"(L) assurance that the prime sponsor will make available the data necessary for the Secretary to prepare the report required by subsection (h).

"(f)(1) Employment and training under this section shall be of a nature of developing the participant's role as a meaningful member of the community, and may include, but is not limited to, such employment, and training in such fields as environmental quality, health care, education, social services, public safety, crime prevention and control, transportation, recreation, neighborhood improvement, rural development, conservation, beautification, and community improvement projects.

"(2) No funds for employment funded under this section shall be used to provide public services, through a nonprofit organization, association, or institution, or a nonprofit private institution of higher education, or any other applicant, which were previously provided by a political subdivision or local educational agency in the area served by the project or where the employment and training takes place, and no funds will be used under this section to provide such services through such an organization or institution which are customarily provided only by a political subdivision or local educational agency in the area served by such project or where the employment and training takes place.

"(g) The Secretary may, in approving a prime sponsor to operate a youth incentive entitlement project, test the efficacy of any of the following:

"(1) the use of a variety of subsidies to private-for-profit employers, notwithstanding the provisions of subsection (d) and (f)(1), to encourage such employers to provide employment and training opportunities under this section, but no such subsidy shall exceed the net cost to the employer of the wages paid and training provided;

"(2) arrangements with unions to enable youth to enter into apprenticeship training as part of the employment provided under this section;

"(3) a variety of administrative mechanisms to facilitate the employment of youths under an entitlement arrangement;

"(4) the inclusion of economically disadvantaged youths between the ages of nineteen and twenty-five who have not received their high school diploma;

"(5) the inclusion of occupational and career counseling, outreach, career exploration, and on-the-job training and apprenticeship as part of the employment entitlement; and

"(6) with the approval of the appropriate authorities, the inclusion of youth under the jurisdiction of the juvenile or criminal justice system.

"(h) The Secretary shall report to the Congress no later than March 15, 1978, on his interim findings on the efficacy of a youth incentive entitlement. He or she shall submit another report three months after the termination of the youth incentive entitlement projects authorized under this section. Included in such a report shall be findings as to—

"(1) the number of youth enrolled at the time of the report;

"(2) the cost of providing employment opportunities to such youth;

"(3) the degree to which such employment opportunities have caused out-of-school youth to return to school or others to remain in school;

"(4) the number of youth provided employment in relation to the total which might have been eligible;

"(5) the kinds of jobs provided such youth and a description of the employers—public and private—providing such employment;

"(6) the degree to which on-the-job or apprenticeship training has been offered as part of the employment;

"(7) the estimated cost of such a program if it were to be extended to all areas;

"(8) the effect such employment opportunities have had on reducing youth unemployment in the areas of the prime sponsors operating a program; and

"(9) the impact of job opportunities provided under the program on other job opportunities for youth in the area.

"DEMONSTRATION PROJECTS

"SEC. 319. (a)(1) Seventy-five per centum of the funds available for carrying out this section shall be allocated as follows:

"(A) 75 per centum of the amount available for this subsection shall be allocated on the basis of the relative number of unemployed persons within the State as compared to such numbers in all States; and

"(B) 25 per centum of the amount available for this subsection shall be allocated on the basis of the relative number of persons in families with an annual income below the low-income level within the State compared to such total numbers in all States.

"(C) Of the amount allocated to any State, 5 per centum shall be available to the Governor to provide financial assistance for special statewide programs or other types of programs or categories of eligible youths not being adequately provided by prime sponsors.

"(D) The remainder of the sums allocated to each State shall be allocated by the Secretary among areas served by prime sponsors within the State, as determined by the Secretary, on an equitable basis based upon the factors set forth in paragraphs (A) and (B).

"(E) In determining allocations under this subsection, the Secretary shall use what he or she determines to be the most recent and best available data.

"(2) The remaining one-fourth of the funds available to carry out this section shall be used at the Secretary's discretion to carry out innovative and experimental programs for eligible participants, for the purposes of preparing them for, enhancing their prospects for, or securing their employment in jobs through which they may be reasonably expected to advance to productive working lives.

"Eligible Activities

"(b) Financial assistance under this section shall be available for programs, projects, and activities designed to make a significant long-term impact on the structural unemployment problems of youth with particular emphasis on the problems of economically disadvantaged youth and consideration for youth with special problems such as migrants, native Americans, handicapped, offenders, and those with dependents. Such programs, projects, and activities may include but shall not be limited to—

"(1) outreach, assessment, and orientation;

"(2) counseling; including occupational information and career counseling;

"(3) activities promoting education to work transition;

"(4) development of information concerning the labor market, and provision of occupational, educational, and training information;

"(5) services to youth to help them obtain and retain employment;

"(6) literacy training and bilingual training;

"(7) attainment of certificates of high school equivalency;

"(8) job sampling, including vocational exploration in the public and private sector;

"(9) institutional and on-the-job training, including development of basic work skills and job skills;

"(10) transportation assistance;

"(11) child care and other necessary supportive services;

"(12) employment in community service and community improvement projects as defined in section 321;

"(13) programs jointly administered by prime sponsors and local education agencies to coordinate work in the private and public sector with education and supportive services;

"(14) job restructuring to make jobs more responsive to the objectives of this part, including assistance to employers in developing job ladders or new job opportunities for youths, in order to improve work relationships between employers and youths;

"(15) employment and training, employment opportunities, and related services conducted by community-based organizations which have demonstrated effectiveness in meeting the needs of youths;

"(16) community-based central intake and information services for youth;

"(17) job development, direct placement, and placement assistance to secure unsubsidized employment opportunities for youth to the maximum extent feasible, and referral to employability development programs;

"(18) programs to overcome sex-stereotyping in job development and placement;

"(19) programs and outreach mechanisms to increase the labor force participation rate among minorities and women; and

"(20) upgrading the quality of on-going title I youth programs.

"(c) The Secretary shall not provide financial assistance under section 319(a)(1) unless the prime sponsor or Governor submits an application, in such detail as the Secretary may prescribe, describing the programs, projects, or activities proposed to be carried out with such assistance. The provisions of sections 108, 109, and 110 shall apply to applications for financial assistance by prime sponsors under this section and such applications shall be reviewed by prime sponsor-planning councils in accordance with the provisions of section 104: *Provided*, That eligible youth and representatives of youth-serving agencies shall be added to such councils when reviewing applications under this part. Such application shall be coordinated to the maximum extent feasible, with the plan submitted under title I, but services to youth under that title shall not be reduced because of the availability of financial assistance under this section. Such application shall also provide for the maximum feasible utilization of any services that are available without reimbursement from the State employment service that would contribute to the achievement of the purposes of this section.

"(d) In order to carry out this section the Secretary, a Governor, or a prime sponsor may enter into contracts with project applicants (as defined in section 701(a)(15)) or employers organized for profit but payments to such employers shall not exceed the amounts permitted under section 101(5), or may operate programs directly if, after consultation with community-based organizations and nonprofit groups, they determine that such direct operation will promote the purposes of this part.

"(e) Participants in programs authorized by this section shall be limited to persons between ages sixteen through twenty-one, inclusive.

"(f)(1) Programs under this section shall serve youths who are not members of households which have current gross family income, at a rate exceeding the lower living standard income level.

"(2) Income eligibility determinations under this subsection shall be made consistently with the provisions of section 608(a)(2).

"(g) Notwithstanding subsection (f) not more than 10 per centum of the funds available for this section may be used for programs which include youth of all economic backgrounds to test the desirability of such a mix.

"(h) Prime sponsors may use up to 30 per centum of their allocation for community improvement projects and such projects may use up to 25 per centum of the financial assistance provided for them under this Act for supplies and equipment.

"(i) In the administration of this section, appropriate efforts shall be made to encourage the granting by the educational agency or school involved of academic credit to eligible participants who are in school and for competencies derived from work experience obtained through programs established under this section.

"(j) Programs under this section shall be subject to continuing performance evaluation pursuant to the provisions of section 313(a) of this Act. The Secretary shall report to Congress by March 15, 1978, on the progress of the program under this section.

"DISREGARD OF EARNINGS

"SEC. 320. Earnings received by any youth under this part shall be disregarded in determining the eligibility of the youth's family for, and the amount of, any benefits based on need under any Federal or federally assisted programs.

"DEFINITION

"SEC. 321. For the purposes of this part 'community improvement projects' means projects which provide work which would not otherwise be carried out, including, but not limited to, the rehabilitation or improvement of public facilities: neighborhood improvements, including basic repairs to low-income housing; and conservation, maintenance, or restoration of natural resources on publicly held lands other than Federal lands.

"LABOR STANDARDS

"SEC. 322. No program, project, or activity shall be funded under this part unless there is adequate assurance that no youth will be hired when any other person is on lay-off from the same or any substantially equivalent job and that it meets the requirements of this part, of sections 205(c)(8), 205(c)(24), 205(c)(25), 208(a)(1), 208(a)(2), 208(c), and 605(b), and of title VII: *Provided*, however, That in the case of community improvements projects of the kind to which the provisions of section 706 or 604(b)(3) would otherwise apply, the Secretary is authorized, for projects of under $5,000, to approve rates of pay for youth participants which are not less than the applicable minimum wage but not more than the wage rate of the entering apprentice in the most nearly comparable apprenticeable trade, and to prescribe the appropriate ratio of journeymen to such participating youths.

"AUTHORIZATION

"SEC. 323. There are authorized to be appropriated such sums as are necessary to carry out the provisions of this part for the fiscal year ending September 30, 1978.".

TITLE III—MISCELLANEOUS

SEC. 301. The limitations of section 4(e) of the Comprehensive Employment and Training Act of 1973 shall not apply to appropriations for part C of title III and for title IV of such Act for the fiscal year ending September 30, 1978.

SEC. 302. Appropriations for youth programs (other than those authorized under section 304(a)(3)) under title III of the Comprehensive Employment and Training Act as in effect before the amendments made by this Act shall to the maximum extent consistent with law, be obligated and expended in accordance with the provisions of part C of title III, as added by this Act.

The SPEAKER. Is a second demanded?

Mr. SARASIN. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

CALL OF THE HOUSE

Mr. ASHBROOK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 239]

Abdnor	Forsythe	Neal
Andrews, N.C.	Gaydos	Nix
Annunzio	Giaimo	Poage
Armstrong	Gibbons	Pressler
Ashley	Hansen	Price
Badillo	Harrington	Railsback
Beard, R.I.	Harsha	Roe
Bedell	Hefner	Roybal
Blouin	Heftel	Scheuer
Boggs	Jacobs	Sebelius
Clawson, Del	Johnson, Colo.	Seiberling
Collins, Ill.	Keys	Sisk
Conyers	Koch	Skubitz
Corman	Krebs	Staggers
Dellums	Lederer	Steers
Dent	McKinney	Stokes
Diggs	Mann	Teague
Dingell	Mathis	Thompson
Drinan	Mazzoli	Udall
Eilberg	Moffett	Van Deerlin
Fascell	Moorhead, Pa.	Waxman
Flippo	Murphy, Pa.	Wiggins
Florio	Myers, Michael	Young, Alaska

The SPEAKER pro tempore. On this rollcall 363 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 10, FEDERAL EMPLOYEES' POLITICAL ACTIVITIES ACT OF 1977

Mr. MURPHY of Illinois, from the Committee on Rules, submitted a privileged report (Rept. No. 95-350) on the resolution (H. Res. 575) providing for consideration of H.R. 10, to restore to Federal civilian and Postal Service employees their rights to participate voluntarily, as private citizens, in the political processes of the Nation, to protect such employees from improper political solicitations, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 6884, INTERNATIONAL SECURITY ASSISTANCE ACT OF 1977

Mr. MURPHY of Illinois, from the Committee on Rules, submitted a privileged report (Rept. No. 95-351) on the resolution (H. Res. 576) providing for the consideration of the bill (H.R. 6884) to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain changes in the authorities of that act, and for other purposes, which was referred to the House Calendar and ordered to be printed.

YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATION PROJECTS ACT OF 1977

The SPEAKER pro tempore. The gentleman from California (Mr. HAWKINS) and the gentleman from Connecticut (Mr. SARASIN) will each be recognized for 20 minutes.

The Chair recognizes the gentleman from California (Mr. HAWKINS).

Mr. HAWKINS. Mr. Speaker, I yield myself 4 minutes.

Mr. Speaker, I am pleased to rise in support of H.R. 6138, as amended, the Youth Employment and Innovative Demonstration Projects Act of 1977.

I wish to express my gratitude to the chairman of the Education and Labor Committee, CARL PERKINS, for his able assistance in drafting this legislation and for his cooperation in expediting committee action and House consideration of this measure. Of necessity, we have moved with haste, but I believe we have developed a bill which effectively addresses the problems of youth unemployment and offers us the opportunity to determine the best approach to take in long term legislation to be drafted next year. I also wish to congratulate the members of the subcommittee whose loyal attendance and thoughtful contributions brought about helpful refinements of this bill. Finally, I want to express my extreme gratitude for the fine cooperation I have received from the ranking minority member of the Subcommittee on Employment Opportunities, the Honorable RONALD SARASIN, and the very able ranking minority member of the full committee, the Honorable ALBERT QUIE. Through their efforts, we have developed a truly bipartisan measure to address a very complex issue.

Mr. Speaker, on March 9, President Carter submitted his message to Congress on youth employment. In his message, President Carter outlined his program to be financed by his request in the economic stimulus appropriation for a total of $1.8 billion for 18 months. Along with doubling the Job Corps, the President proposed a Young Adult Conservation Corps, a Youth Community Conservation and improvement projects program, and a comprehensive youth employment and training program. The combined program would operate under the existing titles of CETA. Later, on April 6, the President submitted his request as legislation establishing a new title VIII of CETA.

The bill before you today has taken the basic thrust of the President's proposal and has assumed the funding level outlined in the economic stimulus appropriation. However, this bill differs substantially from the President's earlier request in that it reflects the short term nature of the proposed programs. This legislation authorizes a variety of approaches to address the continuing high rate of youth unemployment. While the committee bill clearly recognizes the necessity to move promptly and forcefully to provide employment and training opportunities for our Nation's young people, it also recognizes that we do not have the answers about what works best.

We anticipate that youth employment programs, including those already authorized by CETA, will be carefully reviewed in connection with reauthorization of the Comprehensive Employment and Training Act next year. It is our intention to draft a comprehensive youth employment strategy tying in existing youth-serving programs and education programs. Further, we believe that by that time we will have some indication based on the experience of this legislation as to the most promising approaches to address the structural unemployment of youth.

There, rather than proposing at this time a new title to CETA with the implication that we are offering a truly "comprehensive" approach, we are proposing two separate programmatic thrusts: First, through the establishment of a Young Adult Conservation Corps to be funded for 3 years, and second, through authorization of demonstration projects as an amendment to title III of CETA for 1 year.

Title I of H.R. 6138 establishes a year-round Young Adult Conservation Corps for youth 16–24 to be administered by the Department of Agriculture and Interior through interagency agreements with the Department of Labor. Youth are to be referred to the Corps through CETA prime sponsors and Employment Services. The YACC is modeled after the successful summer YCC program enacted in 1970. Congressman LLOYD MEEDS authored a bill establishing the year-round program which passed the House in the last Congress by a vote of 290 to 70. Unfortunately, the Senate took no action on this program. We have incorporated this program in the committee bill to emphasize that while we view the YACC as a program primarily designed to address pressing conservation and land management needs, it offers an outstanding opportunity to provide useful employment to youth of all backgrounds. It is the intention of the bill's authors that the Corps should be open to youth from all areas of the country and should be represenative of youth of all socioeconomic and racial classifications.

Title II adds a new part C to title III of the Comprehensive Employment and Training Act. This new part authorizes a variety of innovative demonstration projects to explore the relative advantages of different approaches to the problem of youth unemployment. Twenty-five percent of the funds under this title are reserved for pilot projects to demonstrate the effectiveness of a program to guarantee employment to poverty-level youth age 16–19 who are in school or willing to return to seek a high school diploma or its equivalent. The Secretary of Labor is directed to select prime sponsors from a variety of socioeconomic and geographic circumstances to test the program.

Of the remainder of the funds under this title, 75 percent are to be allocated to prime sponsors by formula similar to title I of CETA for a variety of youth employment and training programs. Twenty-five percent of the funds are reserved for innovative programs at the discretion of the Secretary of Labor. Among the activities which the bill authorizes are: Outreach, counseling education-to-work transition, job sampling, cooperative programs between prime sponsors and education agencies, programs for minorities and women and other activities designed to improve the employability of youth.

It is the intention of the authors that this bill should encourage the continued involvement of private nonprofit youth-serving organizations and other community-based organizations in employment and training projects for youth. Section 319(d) of the act encourages prime sponsors to contract with community-based groups in the operation of such projects. One such organization which has provided particularly effective service in this area is OIC, Opportunities Industrialization Centers. OIC's career intern program is an example of one outstanding activity which this bill might fund.

The committee amendments to H.R. 6138 are based on several premises endorsed by numerous witnesses and endorsed by the committee members. Those premises are:

First. While there is acknowledged benefit in providing opportunities for all youth, there is a need to target limited funds to those youth in greatest need;

Second. Education, training, and supportive services are essential components for employability development for youth.

Third. An effective youth strategy must have ties with the educational system, including vocational education institutions;

Fourth. Employment opportunities must provide valuable experience in terms of training and work performed. "Make-work" jobs are little more than a temporary salve, and in fact are rejected by the youth themselves as efforts by the middle-class adults to keep them off the streets without improving their chances for future employment; and

Fifth. Private sector involvement is essential for a lasting and effective program to address the structural unemployment problems of youth.

While H.R. 6138 is not the answer to all the problems which face our Nation's youth in their efforts to obtain and improve their employment opportunities, it is, I believe, a valuable first step which will provide us with worthwhile experience and information as we attempt a more comprehensive approach in the near future.

Mr. SARASIN. Mr. Speaker, I yield myself 5 minutes.

Mr. Speaker, I wonder if it is possible in this Chamber to cast half a vote, because this is what I would prefer to do on the legislation providing jobs for youths, which we just this past week reported from full committee.

On the one hand, I like this bill. It is far superior to the legislation proposed by the administration or now under consideration in the Senate. As the esteemed chairman of the subcommittee, Mr. HAWKINS, has already pointed out, this bill is a reasonable response to a problem

we know little about. Rather than enact a full-scale, full-blown program, this bill is designed to search out the answers to the complicated and serious unemployment problems of youths before enacting a permanent fixture.

Second, rather than emphasizing short-term, make-work jobs for out-of-school youth which the administration proposal does, it places major emphasis on in-school youths and on encouraging youths to return to school. At the same time, it is a broad program, flexible in its design, which will reach to all youth in the Nation.

And, third, it will provide ample room to experiment with a variety of different approaches bringing in all segments of the community in trying to resolve the youth unemployment problem. Hopefully, by this time next year, after enacting this bill, we will have a better understanding of the needs of youths and perhaps we can write good legislation rather than legislation resulting from the pressure of politics. The chairman of the subcommittee, the honorable gentleman from California, is deserving of every praise for refusing to go along with the administration's approach.

Yet, I am dismayed by the inclusion of language in the bill requiring the payment of prevailing wage for all the youth jobs created in it. I am particularly dismayed by the application of this language to the section 318 program, the "youth entitlement incentive" program which is derived directly from H.R. 6044, legislation I introduced earlier this session.

The section 318 program can be an effective device to attack the root problems of youth unemployment. We must encourage youth to complete their basic education. Anything short of this will jeopardize their future employability.

Ironically, we now have extensive programs in higher education such as work-study and the basic opportunity grant program, but we have nothing for high school youths. And it is here where the problem of future unemployment really begins. Section 318 provides for such an approach—on a pilot basis. Yet the inclusion of prevailing wage, as opposed to minimum or apprenticeship wages, in this program is potentially ruinous.

During full committee, I distributed a list of the existing prevailing wages, some of which I have mentioned in the supplemental views to the report. For example, the prevailing wage for an unskilled worker in California is $5.03; for a parking attendant in the same State it is $4.95. In New York State, it is nearly $4. And if you employ a youth in a custodial capacity in Michigan, it is $4.29.

If local employers are required to pay this wage, I seriously doubt that any youth will be hired into this program, for it simply would be too much to expect of local employers to hire an unskilled youth for a part-time or entry level job at those wages.

Kenneth Gibson, mayor of Newark and president of the U.S. Conference of Mayors, argued forcefully during subcommittee consideration that what was really needed was a "differential" for youth and the direct involvement of the private sector. Unfortunately, this legislation has been stripped of almost every provision allowing this to occur.

During full committee, we came up with a compromise which I do not find altogether satisfactory but one which I am ready to accept, if somewhat half-heartedly, and this would provide for job restructuring at the local level before employing any youth. Perhaps this will reduce the prevailing wage and, possibly, it will open up some job opportunities, but I have my doubts.

The unions' concern is that if we don't provide for prevailing wages we will have created a huge number of cheap workers who will be quickly utilized to replace more expensive older workers. Although I share some of their concerns, I seriously doubt that youths working part time during the school year can be or will be used in this fashion, for what this program is at its heart is an education program, not an entry level jobs program. It is designed to urge youths to complete their education and gain some work experience. It is not designed to be used as public service employment by city officials.

Further, none of the existing education programs, such as the work-study program, the work-experience program under vocational education, and even the career education work experience program passed in this House a few weeks ago, include prevailing wage. Some of these programs do not even require minimum wage, yet they involve millions of youths, many times what I have proposed be included in this bill. In fact, the numbers of youths that might be involved under my particular provision, section 318, may not amount to more than 100,000 yet we are here requiring the payment of prevailing wages. Finally, prevailing wages destroys the essential flexibility needed to experiment fully. None of the assumptions regarding the effect of wages or job availability can be tested if we retain the prevailing wage.

I intend to support passage of this bill, but I believe it is up to the conscience of every Member of this House to reflect on what will happen in his or her district if youths are required to be paid prevailing wages as opposed to the minimum or apprenticeship wages; to ask themselves just how many of these youths will actually find jobs.

I am hopeful we can come up with a reasonable solution to this problem, and I hope we can go in a bipartisan fashion to the conference. I feel we must go to conference in this spirit, but it is clear to me that as long as prevailing wage is left intact we may be wasting our time.

Mr. HAWKINS. Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. WRIGHT), our distinguished majority leader.

Mr. WRIGHT. Mr. Speaker, we have before us today one of the most important bills of this session. It is one of the major building blocks in the program for economic recovery developed jointly by the President and the Congress.

This bill, H.R. 6138, the Youth Employment and Training Act of 1977, aims to conserve and to redeem the most precious natural resource we have in this country—our Nation's youth.

Among the staggering statistics of the recession which has plagued and haunted our economy there stand out certain figures that are more startling than the rest—the figures which show a persistent, high unemployment rate for young people.

During the first quarter of this year, when the overall unemployment rate was 7.4 percent, the rate for young people between the ages of 16 to 19 who were seeking work was 18.6 percent, and the rate for blacks in the same age bracket was 37.8 percent.

Even when we extend the bracket up to age 24, we find an unemployment rate approximately double the national average. Young people in this age range represent more than 46 percent of the unemployed workers in the Nation.

It is interesting to observe in this connection that 75 percent of all serious crimes in this country are committed by people under the age of 25. The persistent level of structural unemployment in that age range is certainly more than coincidental.

This bill will provide useful summer jobs and part-time work during the school year for more than 200,000 of America's young people. It also provides training.

It includes incentive programs for the private sector to offer useful part-time work for students who otherwise might not be able to stay in school and complete their education.

And it creates a Young Adult Conservation Corps to perform needed, long-deferred, labor-intensive work on our public lands and in our public parks—reforestation, trail and campground improvements, and control of insects, disease, soil erosion, forest fires and floods.

Occasionally we rhapsodize about modern technology, the age of computers, the spinoffs from the space program. But if there were no place in this technological society for humanity, if these advances should mean permanent structural unemployment for millions of people, technology would have failed us.

This need not be the case. But it also is true that young people cannot make it in today's society without education or training.

Most importantly, they cannot make it without motivation. They need to know that somebody sees them, that somebody cares. They need to know that there is work to be done and that there are decent jobs they can fill.

Of course we recognize that, for physical or mental reasons, or because of childrearing responsibilities, there always will be a few people who cannot work, either temporarily or permanently.

But to accept as immutable fact that young, able-bodied people can never find gainful employment—because of defective upbringing, insufficient education, or motivation—is to assign human beings to meaningless lives of oblivion before giving them a chance. It is to consign them blithely to the ash heap of lost causes.

The great merit of the Youth Employ-

ment and Training Act is that it seeks to do something about this deplorable situation through an approach that has been among the most successful in our Nation's history.

Title I of the bill would create the Young Adult Conservation Corps, patterned after the highly successful Civilian Conservation Corps of the 1930's and expanding on the present Youth Conservation Corps, a summer program for young people.

It would give young people aged 19 to 24, as well as high school graduates and school dropouts aged 16 to 19, an opportunity for employment up to a full year doing important conservation work that America needs to have done.

Back in the 1930's CCC workers planted trees which are now being harvested in our national forests. Meanwhile, there is a great backlog of tree planting and other resource conservation work that would go undone but for a new program like the CCC. The Young Adult Conservation Corps can be the answer.

Other examples of important work that needs doing—while many of America's young people remain in an economic and cultural vacuum—are erosion control, the repairing of damage from floods and other natural disasters, range management improvements, recreation development and rehabilitation, forest insect and disease control, road and trail improvements, and wildlife preservation.

Surely it makes eminent good sense to match these two needs—young people needing work, and work needing doing.

By providing young people with work, by broadening their horizons, by giving them the taste of accomplishment the Nation will realize an early return on its investment—and have the benefit, as well, of countless permanent improvements in its forests and parks.

One of the basic reasons we have structural unemployment is that so many young Americans have failed to complete their education, leaving them without marketable skills. Title II of this bill attacks that problem in two ways.

First, it provides an incentive to young people to stay in or return to high school. It does this through offering them part-time employment during the school year and full-time employment during the summer. This reduces the lure that otherwise draws many young people away from school—the irreducible need for funds.

How important it is for a young person to complete his education was shown in a study made in March 1975, of unemployment rates based on educational attainment.

What that study revealed was that persons with less than 12 years of education had an unemployment rate of 13.8 percent, compared to 9.1 percent for those with a high school diploma, 6.9 percent for those with 13 to 15 years of school, and 2.9 percent for college graduates.

Second, the bill provides funding for a variety of innovative demonstration projects that can explore methods of dealing with the structural unemployment of youth. Grants would be made available for projects proposed by local governments, educational agencies, labor organizations, businesses, private associations, and the like—giving us an opportunity to put the best brains of America to work on this critical problem.

Both of these approaches offer real promise of reducing the structural unemployment in our midst.

Mr. Speaker, the future of this Nation rests not only with the young people who go on to college and who hope to fill positions of the highest responsibility in this country. It rests as well with those who must become the artisans of the next generation—the mechanics, carpenters, plumbers, electronic repairmen, and all the rest who will be the backbone of our society.

As a nation we cannot accept and cannot tolerate leaving people by the wayside. Mere handouts often damage most those who receive them. It is our responsibility to give young people every chance to come into the mainstream of American life.

This bill we have before us today is intended to do just that. It extends not a handout but a hand up. I urge its passage.

Mr. HAWKINS. Mr. Speaker, I yield 5 minutes to the gentleman from Kentucky (Mr. PERKINS), the chairman of the Committee on Education and Labor.

Mr. PERKINS. Mr. Speaker, I rise in strong support of H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977.

This bill is the product of a bipartisan effort on the Committee on Education and Labor to come forth with a bill which truly addresses the problems of the millions of unemployed youth in this country, who are ready and able to work but can find no productive employment.

The Subcommittee on Employment Opportunities, chaired by my good friend and distinguished colleague, AUGUSTUS HAWKINS, held numerous hearings and mark-up sessions to come up with the measure we will be voting on today.

H.R. 6138 is a carefully crafted, well-balanced approach to the problem of youth employment, and cleared the committee by a vote of 32 to 2. I wish to congratulate Chairman HAWKINS for his leadership in getting this most important piece of legislation to the floor so rapidly, and I wish to congratulate AL QUIE, the ranking minority member of the committee, and RON SARASIN, the ranking minority member of the subcommittee, for their great contributions to this bill.

After all, Mr. Speaker, the problem of youth unemployment is too serious to be a matter of partisan dispute. The committee worked on this measure in a bipartisan spirit from start to finish, and I am proud of the bill we have reported out.

The Carter administration supports this bill, Mr. Speaker. While the administration wanted a number of features which we decided not to adopt, it nonetheless basically supports the bill as reported. The administration is committed to trying to solve the problem of youth unemployment, and we have tried to cooperate with them as much as we could in reaching that common goal.

Let me move now to a brief explanation of H.R. 6138.

Title I of the bill amends the existing law authorizing the Youth Conservation Corps summer program by creating the Young Adult Conservation Corps Act to employ young adults on a year-round basis.

This program is intended to concentrate both on the high level of unemployment among young people, and badly needed resources management work on our Nation's public lands.

The Department of Interior has informed the committee that it has identified approximately 370,000 man-years of projects within its vast inventory of natural resources and public recreational activities. The Department is ready to employ 10,000 young adults within 90 days of funding.

The Agriculture Department has informed the committee that it has a reforestation backlog of over 3 million acres. It is prepared to employ large numbers of young people to replenish this valuable land.

The program we have developed would be administered by the Secretaries of Interior and Agriculture pursuant to interagency agreements with the Secretary of Labor.

I might say at this point that the House-passed Young Adult Conservation Corps bill of last year, H.R. 10138, which we used as a model for this title, did not provide a role for the Secretary of Labor. The committee felt that it would be fitting to give the Secretary of Labor a role in the administration of the Young Adult Conservation Corps program in this bill. It is fitting because, while the program is an important conservation program, it is also a manpower program and should be administered to give due weight to our manpower policy as interpreted by the Secretary of Labor.

Applicant referrals for the Corps are to be made by way of the interagency agreements from the agencies of the U.S. Employment Service and CETA prime sponsors.

Youth between the ages of 16 and 24, who have completed high school or dropped out for reasons other than joining the Corps, will be eligible for membership.

They must be physically capable of carrying out the work to be accomplished and may be employed for one or more periods, not to exceed a total of 12 months. They may share common facilities with youth enrolled in other federally assisted employment and training programs. They may receive academic credit for their participation if applicable.

Title II of the bill is an amendment to title III of the existing CETA legislation.

Section 318 of this title is an experimental program proposed by Congressman RON SARASIN and adopted by the committee. This youth incentive entitlement program will be operated on a pilot basis by a limited number of prime sponsors to demonstrate the efficacy of guaranteeing employment and training to economically disadvantaged youth age 16 to 19, who are in school or willing to return to school to seek a high school diploma or its equivalency.

Participating youth would be entitled to part-time work not to exceed 20 hours a week during the school year and to a full-time summer job. The youth must meet three requirements:

First. The youth must be economically disadvantaged;

Second. The youth must remain in or enter high school or its equivalency for the purpose of completing his or her high school education;

Third. The youth must maintain the minimum academic and attendance requirements of the school and minimum attendance in work requirements.

The Secretary of Labor is required to report to the Congress on how well this entitlement approach works in meeting the employment and educational needs of disadvantaged youth. Twenty-five percent of the funds available under title II of H.R. 6138 are available for this program.

Section 319 of the bill provides that the remaining 75 percent of the funds for title II will be devoted to innovative demonstration projects in order to determine what approaches work best in alleviating the unemployment problems of youth.

Of the funds available under section 319, 75 percent are allocated to prime sponsors under the CETA title I formula, and 25 percent are to be allocated according to the Secretary's discretion. Of the funds allocated to the States, 5 percent would be available to the Governor to provide financial assistance for special State-wide programs or other types of programs for categories of eligible youth not being adequately served.

Eligible activities include outreach, counseling, activities promoting education-to-work transition, labor market information, attainment of high school equivalency, job sampling, on-the-job training, supportive services, programs jointly administered by prime sponsors and local education agencies, job restructuring, programs to overcome sex-stereotyping in job development and placement, outreach programs for minorities and women, and other activities designed to improve the employability of youth.

The major objective of the activities under title II is to test, on a pilot and experimental basis, what types of programs can best develop the capability of young people to enter the job market and to increase their chances for lasting employment. We can thus make a more intelligent and informed allocation of the resources we have available for assisting our Nation's youth.

Let me say in closing that I have heard some concern expressed about the fact that the bill includes a prevailing wage concept. When Members understand what wage provisions are in the bill, they will realize that these concerns are unfounded.

Under present law, public service employees under CETA must be paid the same wages that other employees employed by the same employer are paid for performing similar public occupations. Obviously, two persons doing the same work for the same employer should not be paid differently—just because the Federal Government is paying the wages of one of them. It is that simple concept that we have also applied to the youth who will be employed under this bill.

Will this lead to youth being paid high wages under the program? Emphatically, no. To make absolutely sure of that, we have special provisions in the bill to encourage public employers to establish new types of jobs, and new classifications and occupations for youth. As these new jobs will not be performed by regular employees, there will be no prevailing rate and the youth will be paid the minimum wage.

Looking at all the provisions of the bill, I think there is no question that the overwhelming number of jobs for youth under this program will be at the minimum wage.

The prevailing wage concept is included only to make sure that the jobs of existing employees are not undermined by unfair competition from underpaid youth. There is no point in providing employment to the young at the expense of the jobs of their parents.

I want to again commend my colleagues on the committee for the bipartisan effort which went into this bill, and I urge my colleagues to vote for its passage.

I want to repeat in conclusion, Mr. Speaker, that the prevailing wage rate as mentioned in the bill applies only to title II and was put in there as a safeguard against displacing adult workers, with classifications that any prime sponsor can come forward with, and as a result of those classifications in title II, in many cases the minimum wage only will be paid and not the prevailing wage rate in that section of the country. We all know the prevailing wage rate varies throughout the Nation, and that is the reason we set up the classification in this bill.

Mr. SIMON. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Illinois.

Mr. SIMON. I thank the chairman of my committee for yielding.

I simply want to concur in his remarks and to join in praising the chairman of the subcommittee, our colleague, the gentleman from California (Mr. HAWKINS) for his leadership not only on this bill but in the whole jobs area. I think the emphasis placed through the Sarasin amendments on encouraging education is a step forward. I think the bill as a whole is a step forward.

Mr. PERKINS. I wish to thank my distinguished colleague for his comments, and I certainly want to compliment the chairman of the committee.

Mr. SARASIN. Mr. Speaker, I yield 5 minutes to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Speaker, I rise in support of this legislation. I must admit I feel the strongest about the part of the bill, the Young Adult Conservation Corps, of which the gentleman from Washington (Mr. MEEDS) has been a long advocate and author. Here is an area where we find two particular needs in America right now. One is to provide the conservation work, and I point out particularly the reforestation and improved timber growth, a renewable resource, and the other is to provide jobs for the huge number of unemployed youth. They match together so beautifully to provide jobs and conservation and timber work that is necessary presently. I believe that this is going to turn out to be the most outstanding part of the legislation.

Mr. Speaker, it is far and away superior to what I have seen the administration propose.

The fact is that if we fail to pass this bill today we will only be providing what the administration wants and that is not good enough. Mr. Speaker, the money has already been appropriated and the Secretary already has ample authority to do what he wants under his discretionary authority. But the administration has indicated to us that notwithstanding they will follow what the Congress mandates, and if we prevail in the conference then it will be what we mandate.

On the subject of the prevailing wage, we have, I believe, a reasonable compromise. What we are saying is that the employers and the unions must get together to work out new jobs for youth, and I suspect these will be largely less than the prevailing wage and more than likely at the minimum. This does not exist in the Senate or the administration bills.

This bill is not a wild-eyed shot in the dark. It is flexible and provides ample room to experiment with a variety of different programs to find out what works best. It contains a Young Adult Conservation Corps which will provide all youth with an opportunity to work in the Nation's parklands and forests. It emphasizes the problems of school dropouts by encouraging them to return to school. And it leaves major decisionmaking responsibility at the local level and not in the hands of some Washington bureaucrat.

I would like to address another aspect of this bill. During subcommittee markup, I offered an amendment designed to improve the quality of occupational and career counseling for youth.

We often forget that the success or failure of particular programs depends more on the quality and skills of the people who run them than on the design of the program itself. This Congress could enact a "perfect" program, but it would fail if it were run by poorly trained people.

CETA has suffered from the outset from a lack of technical assistance and skill training. Local elected officials and CETA administrators have had to learn the hard way—by trial and error—when a lot of mistakes and money would be saved if only we improved their capabilities.

The need for qualified people is particularly important in a youth employment program. An unqualified counselor, who knows little about the problems of youth, can do more to undo the benefits of our efforts than any other single person.

I believe it is essential that everyone involved in this program know what they are doing. At the same time, I believe it especially important that local school of-

ficials and the private sector gear their activities toward working with CETA.

It was for these reasons that I offered an amendment during subcommittee markup calling for inservice and preservice training for youth counselors, and placing these counselors throughout the local community.

The committee has decided, rather than enact yet another specific program, to allow such training and pretraining as one of the eligible activities under the part C program. I am encouraged by the committee decision, but I believe it will take firm direction from the Secretary of Labor to initiate this process. It will mean tapping the expertise that already exists, or from the occupational and career guidance profession, or in new and innovative approaches.

Fortunately, this legislation has the flexibility to set new approaches in this area. It is my hope that the Secretary will take this issue seriously and improve his existing efforts to upgrade the quality of occupational or career guidance personnel at the local level.

Mr. Speaker, I yield to the gentlewoman from New Jersey (Mrs. FENWICK), who has some questions.

Mrs. FENWICK. Mr. Speaker, I thank the gentleman from Minnesota for yielding.

I think this is a splendid bill and I heartily concur in youth conservation. That is something I have been urging, as the chairman knows, for many years, ever since I have been here.

I think we should use some of the funds that result from the leasing of our forestlands for direct reforestation, but that is a detail. Wherever the money comes from, still it is the taxpayers who pay it.

But I am troubled by this bill because I, too, have discussed this with Mayor Gibson, who runs one of the most difficult cities in my State. This is not approached just to save money. We are going to have to make some differentials if these young people are going to be employed. They walk the streets of Newark with nothing to do because of the prevailing wage. Young people 16 to 19 years of age are the ones we are talking about.

Mr. HAWKINS. Mr. Speaker, I yield 3 minutes to the gentleman from Washington (Mr. MEEDS).

Mr. MEEDS. Mr. Speaker, I rise in strong support of H.R. 6138 and I want to express my appreciation to the gentleman from California (Mr. HAWKINS), the gentleman from Kentucky (Mr. PERKINS), the gentleman from Minnesota (Mr. QUIE), and the gentleman from Connecticut (Mr. SARASIN) for their help with this legislation.

I would just point out to the body that about 40 years ago almost to the day when this Nation faced a much more critical economic condition than it does today, President Roosevelt suggested an overwhelmingly sensible approach which was called the Civilian Conservation Corps. As near as Skyline Drive or as far as Alaska the physical monuments of that program still stand, the trails and shelters and other parts of the program. But even more important, in addition to the permanent enrichment of our public lands, that program also enriched the lives it touched, the lives of our present-day leaders and many of the people of our country. So the productivity of both our land and our people was enriched by this program.

Today our problems are not as bad as they were in the depths of the depression, but unemployment among youth is one of the most pervasive, one of the most chronic, and one of the most serious problems this Nation faces. This legislation attempts to do something about this problem. Our young people are languishing on street corners and in bars and in unemployment halls, and at the same time there are many jobs that need doing in this country.

Three and a half million acres of our national forests have been cut over and never replanted. There are thousands of miles of trails in our national parks and national lands to be refurbished and upgraded. Campgrounds need to be repaired. Soil erosion needs to be stopped. Fisheries need to be enhanced.

All of these things which will help this country and help the resources of this country and help the young people who need constructive work can be done under this program. This is a program to take the young people off the streets and away from lives of idleness and despair and put them into productive jobs.

It is open to all young people from 16 to 24, of all social-ethnic mix of young people. Title I will be run by the Forest Service and the Interior Department under an interagency agreement.

I think this is important. They have experience running this kind of program. They should continue to do so.

The remainder of the act, I think, Mr. Speaker, is very important.

While title I presents some answers it is not by itself a cure-all for youth unemployment. Title II calls for pilot and demonstration programs in youth employment which should produce some additional approaches to the problem of youth unemployment which will help us substantially reduce it.

Mr. Speaker, I am proud to be the original author and sponsor of title I. I also commend those responsible for title II. I ask my colleagues to overwhelmingly pass the bill.

Mr. SARASIN. Mr. Speaker, I yield 4 minutes to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Speaker, I am finding it difficult to believe that we are bringing a bill like H.R. 6138, the Youth Employment and Training Act, up under suspension of the rules. In effect, we are being asked to vote this bill, which authorizes $1.5 billion, up or down with no chance whatever to amend it one way or another. Although I voted to report this bill, I did so in the belief that the full membership would have a chance to have their say. Apparently, we will not.

I am especially concerned because title II of the bill contains a provision requiring the payment of prevailing wage to youth. This means, Mr. Speaker, that any employer who wishes to hire youth will be required to pay entry level wages ranging up to $5 and $6 an hour.

This is totally unacceptable. It not only will discourage hiring young people which is the intent of the bill, but also sets an unwise precedent.

Let me present some hypothetical situations which I believe will point out the absurdity of requiring prevailing wage.

Let us assume you are a public employer. A 17-year-old walks through the door along with a parent; both need the job, the question is whom do you choose, the parent who has the skills and can work fulltime and with a family to take care of, or the young person who lacks the schooling necessary, might be working only parttime and has no family responsibilities? Naturally you take the older person. The result of this situation is that the youth you are trying to help is not going to get the job.

Now, assume you as an employer have been given the money to hire the young person but you have nothing in your budget for the parent. Now what do you do? Of course, you hire the youth, but at what price? A frustrated, older worker who really needs the job and who would better fit your needs than the young person. Next, let us assume you have enough money for both. This situation may be very real since CETA is expanding so rapidly in the public service jobs program. Now you hire both, but you are required to pay both the same pay, even though the parent may have 20 years working experience and the youth none. Again I ask is this fair? In all three instances there are serious questions of equity.

There are those who might argue that this is not a "real world problem." Do not tell that to your local officials who have the responsibility for operating this program and hiring the people. I might add the "real world" also includes many Americans, heads of households who earn the minimum wage or a little better in the private sector and now that youngster next door is getting a public job paying a salary far beyond his capabilities. It will also encourage youth to leave their jobs in the private sector; a problem so clearly spelled out by economists such as Charles Schultz when "prevailing" was included in H.R. 50, the full employment bill.

It is possible that this committee would not have included the prevailing wage provision had not organized labor applied such immense pressure. At the same time, organized labor was successful in stripping the bill of most of its provisions to encourage private sector participation. The net result is that we have a bill that on one hand excludes youths from public jobs and on the other from private. So what then do we have?

The only attempt made to reconcile this problem, which I believe every member of this committee understands full well, is the language that encourages job restructuring, contained in the section 318 youth incentive entitlement program.

Unfortunately, fully three-quarters of the funds outside of the Young Adult Conservation Corps are to be spent under section 319, which includes a variety of demonstration projects to be operated by CETA prime sponsors.

But my chief concern is that passage of this bill along with the prevailing wage provision would have serious implications for every other youth employment pro-

gram we have on the books. The next thing we know we will be requiring prevailing wages in work-study, in vocational education, in the summer employment, and in title I of CETA. In effect, the prevailing will become the "minimum" and will distort the wage standards throughout the private sector of the economy.

The Youth Employment and Training Act is intended to improve a youth's chances in gaining long-term employment by encouraging that youth to complete his or her high school education. It couples work experience with job training. No Federal training programs require the prevailing wage, not even Chairman PERKINS' Career Education Act which we passed a few weeks ago. If we want our young people to get jobs, I do not believe we should impose the prevailing wage.

This bill on the whole represents a considerable amount of bipartisan effort to develop a truly reasonable approach, considering that the funds have already been appropriated. For the most part I would agree that it is reasonable, but this provision is its "Achilles' heel."

I ask the chairman of the committee to pull this bill off suspension and come back with a more reasonable approach.

Mr. HAWKINS. Mr. Speaker, I yield 3 minutes to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Speaker, I rise in support of H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977 because this legislation provides us with a necessary first step toward our solving the chronic youth employment problem which the Nation faces. I would like to thank chairman CARL PERKINS for his leadership in promoting this legislation and for his foresight in prompting its consideration. It is important that we move quickly in order that our young people may start working. It is my hope that the other body will follow the lead set by Mr. PERKINS and the committee and conclude its deliberations without delay.

During subcommittee consideration of the many youth proposals which resulted in H.R. 6138, there was a great deal of discussion concerning exactly whom this legislation would serve and whether urban youth — particularly inner-city youth—would have the opportunity to participate in the title I program, the Youth Adult Conservation Corps. In reviewing the enrollee characteristics of many of our existing programs, the subcommittee found that some groups without question were underrepresented.

We noticed a trend in the Youth Conservation Corps—the model program for the Young Adult Conservation Corps—YACC—away from participation by low-income youth; in 1971, 36.15 percent of YCC enrollees were from families with incomes of $5,000 or less and 13.8 percent were from families with incomes of $15,000 or more. In 1975, the situation was essentially the reverse: 8.2 percent from families under $5,000 and 25.5 percent from families $15,000 or greater.

In subcommittee, I proposed an amendment, which was adopted, which would have limited participation in the YACC to youths from families with income levels at or below 150 percent of the Bureau of Labor Statistics lower living standard, approximately $15,000 a year for a family of four.

While I, too, would prefer an untargeted program in an ideal situation, I found that we were talking about only 203,000 slots over the next 18 months. It is estimated that there are almost 3½ million unemployed youth. Since we are limited in the amount of money we have for this program. I felt compelled to attempt to target participation to those who would be in real need of the program, middle class youth and below. Interesting enough, over 60 percent of all American families would have qualified for participation had my amendment remained in the legislation. The full committee, however, thought that it would be best to have an untargeted title I program.

Another concern of many of the members of the subcommittee was the participation of young women in these programs. Many of the witnesses who appeared before us reminded the subcommittee that all unemployed youth are not male. They pointed to the Job Corps which is considered an effective training program but which in 1976 was comprised of 71.3 percent males and 28.7 percent females.

According to the Labor Department 1976 annual averages for teenage unemployment young women suffer substantially the same from unemployment: 17.2 percent of young white women and 43 percent of young black women in our cities are unemployed. The statistics for suburban areas and nonmetropolitan areas are not much better: in suburbs, 16.4 percent of young white women and 36.6 percent of young black women are unemployed; in nonmetropolitan areas unemployment includes 15.7 percent of young white women and 42 percent of young black women.

Title I of this bill has safeguards regarding discrimination of any kind: sex, race, creed, national origin, and political affiliation. In addition to these safeguards, title II has sections dealing with the special problems of young women who have dependents.

One other area of concern which the subcommittee dealt with was the participation of urban youth and youth from the eastern population centers in the title I program. The subcommittee accepted an amendment which includes local jurisdictions—cities, counties, townships—as eligible recipients of money under the State grant section of title I. This language together with the expressed intent of the Department of Interior that YACC sites will be 60 percent residential and 40 percent nonresidential insures that urban and eastern youth will have the opportunity to utilize this program.

In closing I would like to say a word about our subcommittee chairman, AUGUSTUS F. HAWKINS. I think that I would be correct in saying that no Member of this House is more committed to getting Americans back to work than is Chairman HAWKINS. This bill is yet another example of his leadership in the area of unemployment problems. As you know, H.R. 6138 is not the legislation which the administration proposed to the Congress in early April. The approach which the subcommittee and the committee has adopted under Mr. HAWKINS' guidance makes a great deal of sense: Establish a program with which we have had some experience—the YACC for 3 years—and promote innovative demonstration and pilot projects which we can review for future programs for 1 year. Under this legislation there will be input from various sources: State and local governments, the prime sponsors, the Department of Labor, and most importantly youths themselves.

H.R. 6138 is not the final word on youth employment. It represents a commitment to deal with the structural unemployment problems which plague our young people, but it is not a restraint. This bill gives us the opportunity to work with an administration which is sympathetic to our goal of constructively involving young Americans in our economic system. I applaud the chairman and I urge its passage.

Mr. SARASIN. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I thank the gentleman from Connecticut for yielding to me.

Mr. Speaker, over the course of the past two decades, Congress has enjoyed some success in its efforts to make life better for the American people. One of our Government's most startlingly failures, however, has been the evident lack of concern about our young people and the jobs that must be theirs if they are to realize their promise in this land of plenty. Since 1955, the unemployment rate among 16 to 24-year-olds has practically doubled, from 11 to 20 percent. Young people comprise only one-fourth of our labor force, yet nearly one-half—about 3.5 million—of the unemployed in this country are youngsters.

There bulk figures are, at best, but a crude description of a complex national problem of many dimensions. Consider, for example, statistics cited by one serious student of the problem, Representative RON DELLUMS. In 1955, about 16 percent of our black youth were jobless; today, the figure stands at 40.5 percent—a national disgrace. Furthermore, these figures do not take dropouts into account.

LABOR FORCE PARTICIPATION

One out of every five black high school graduates has dropped out of the labor force and more than two out of every five black high school dropouts are not looking for work. The LFP rates for young whites are not much better: 16.2 percent of the high school graduates and 36.4 percent of the dropouts are not looking for work.

This brief statistical sketch by no means is a complete picture of the very serious problem of youth unemployment in this country. But it does give one a fix on the enormity of the problem. It was with this in mind that I was deeply concerned over the youth employment proposals submitted this year by the Carter administration, most of which relied on existing CETA programs, referred to by Representative DELLUMS as

"old" and "shopworn"—retreads of the 1960's. Frankly, I was alarmed at the prospect of having to pass judgment on programs dredged up from a bygone era. Programs that did not work then, and would not work now, according to an April 7, 1977 study by the General Accounting Office, which concludes that CETA public service employment programs have been only minimally successful.

Unlike the Senate, the House committee saw fit to substantially change the Carter proposal and it is for that reason that I am pleased to support, with some reservations, H.R. 6138, as reported. The bill creates a Young Adult Conservation Corps, aimed at 16- to 24-year-olds who are unemployed, regardless of family income.

In addition to YACC, the bill authorizes funding through CETA prime sponsors for innovative demonstration projects to upgrade the training and employability of disadvantaged young people aged 16–21.

Finally, the bill calls for CETA prime sponsors to conduct imaginative, new demonstration projects to encourage economically disadvantaged 16- to 19-year-olds to either remain in high school or to return to high school. The youth incentives will be designed to keep young people in high school or to induce dropouts to return by funding 20-hour per week part-time jobs during the school year and full-time jobs during the summer.

Taken as a whole, I think the bill is a step in the right direction. We have a responsibility to the youth of the Nation, a national treasure that has been squandered as we have stood by and watched the unemployment rate for young people climb steadily for two decades.

At the same time, however, I am deeply concerned about one particular provision in title II, which stipulates that participants in the youth incentive programs must be paid the prevailing wage. In spite of language in the committee report which attempts to soften this requirement, I believe that its ultimate impact may be counterproductive and deliterious to our goal of reducing unemployment among young people. If strictly interpreted, the prevailing wage requirement will mean that young hirees may not be paid entry-level wages. Instead, they must be paid at the same levels—regardless of training or skill—as current employees performing the same task.

It seems to me that this could have a variety of adverse effects. A certain percentage of CETA prime sponsors, if required to pay prevailing wages, will undoubtedly want to hire more skilled, older workers eligible for CETA jobs. This would have the unfortunate effect of pitting young, unskilled labor against older, more skilled members of the labor force. The net result is to discriminate against young people, the very ones we are trying to help.

Another shortcoming of the prevailing wage provision is that it "shrinks" the authorization—approximately $250 million—for these incentive programs. It is estimated that as many as 90,000 young people could be put to work this summer with this money, if prevailing wages do not have to be paid. At higher wage rates, substantially fewer young people will be hired. Finally, if accepted, the prevailing wage requirement ruins a chance to test out the broader, more complete ramifications of the youth incentive experiments provided for in the legislation.

In spite of my misgivings, I intend to support this bill, because of my abiding concern about youth unemployment. I think it is a good investment in a sadly neglected resource and I encourage my colleagues to join me in support of H.R. 6138.

Mr. ERLENBORN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. I thank the gentleman for yielding.

Mr. Speaker, the gentleman has made a fine statement, and I want to thank him for it. The gentleman also serves on the Committee on Rules. I would like to ask the gentleman if he sees any hazard in going to the Committee on Rules and getting a rule and having their bill considered on the floor under the usual procedure.

Mr. ANDERSON of Illinois. Mr. Speaker, in response to the question of the gentleman from Illinois, of course I would vote for an open rule that would permit amendments.

But I will today support the legislation.

Mr. HAWKINS. Mr. Speaker, I yield 2 minutes to the gentlewoman from New York (Mrs. CHISHOLM).

Mrs. CHISHOLM. Mr. Speaker, I rise today in support of the Youth Employment bill.

The problems of our youth are enormous and for those of us who represent poverty districts, the situation has reached crisis proportions.

As I indicated in my testimony before the committee, the problems of our young people are so pressing and acute, there is tremendous political pressure on us to "do something!"

Unfortunately the youth employment problem is structural in nature and there is no agreement on the best approach or series of approaches to the problem. The purpose of the legislation before us today is to provide the money and resources for a variety of these approaches to be tried out.

Then we will review all of the approaches and incorporate those that have the most promise in a permanent Comprehensive Training and Employment Act for youth.

I think the inclusion of a program to encourage young people to complete their schooling and to involve the private sector are very important.

I am also especially pleased at the inclusion of these amendments which target the bulk of the money on those from poverty families and call for special attention to youngsters with special problems such as youthful offenders, those with drug and alcohol abuse problems, migrants, those with limited English speaking ability and young people with dependents.

I would like to take a few moments to enlarge on the employment problems of the latter category, most of whom are young women.

I have been distressed that throughout the testimony on the bill and in the literature on the subject, the reference is always to he, him, and his. It is assumed that this is a problem only for young men.

In point of fact, the two-parent working family is now the national norm. Most young women will have to work outside of their homes to support their families. This is especially true of children for low-income families.

In addition, there has been a dramatic rise in teenage pregnancies. In fact, pregnancy is the single biggest reason girls drop out of school.

The Library of Congress indicates that of CETA youth in the 20 to 24 age group—not including summer youth or public service employment—51 percent had one or more dependents.

If these young girls are not to become candidates for the welfare roles, we must help them to finish school and to acquire the job skills they need to support their families.

I would also like to reiterate the need for carefully monitoring, evaluation, and review as well as appropriate technical assistance so that those grantees who are trying out new techniques will provide us with the best possible data base from which to write permanent comprehensive youth employment legislation

Finally—and I realize that there are those who believe I am beating a dead horse—I believe that part A, the Youth Conservation Corps program ought to be targeted on low-income youth as well.

We have limited money and an enormous problem. We do have a responsibility to target our resources regardless of what is "politically popular."

I hope that such targeting will be employed when YCC is reviewed in the future.

I thank you.

Mr. SARASIN. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Speaker, I rise in opposition to H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act. Although the House bill is definitely superior to the one being developed in the other body, it still suffers serious shortcomings.

In addition, I am opposed to the procedure under which the bill is being considered. I cannot understand what a bill of this magnitude, complexity and importance is doing on the Suspension Calendar. Under this procedure no amendments are in order. The House will not have an opportunity to work its will on this major piece of legislation. In my view the bill should be rejected for this reason alone.

I am also concerned that the bill requires payment of prevailing wages for youths other than those in the Young Adult Conservation Corps. The overall

effect will be to exclude youth from public service jobs. Employers will in most cases select an older and more experienced person for the job rather than a young and inexperienced person. The goal of the program—to stimulate youth employment—will be greatly diminished.

Nevertheless, I believe that the House bill, despite its hasty drafting, is definitely superior to the one being developed in the other body. It recognizes that we don't know all the answers and that what we ought to do is experiment before enacting a full-blown, massive, permanent Federal program. If we have no choice in spending $1.5 billion, it is a better way to go, although I believe the bill suffers serious shortcomings and its effect has been severely undercut by the application of prevailing wage.

I am distressed, however, that we are spending $1.5 billion under any circumstances, when not a single day of hearings has been held on the actual problem of youth unemployment by the authorizing committees. Although hearings have been held on specific proposals, hardly a day's time has been spent trying to determine the nature of the youth unemployment problem.

Youth unemployment is a very complicated subject, and will not be resolved by throwing a billion and a half dollars at it. The problem involves the school systems and the effect which they have on making youth employable. It involves our socioeconomic problems and the effect which they have on youth. It involves the desires of youth. It involves the availability of long-term career jobs in the private sector.

It involves the differing needs of youth, be it in the inner-cities or in rural areas. To some extent it involves postsecondary education. It involves the changing nature of our labor market. It involves changes in attitude and family structure. In short, youth unemployment is not easily solved by short-term, make-work, quick-fix public service jobs approaches. Again, I believe that the House bill is superior because it provides for some experimentation. However, we ought to find out first what the problem is to some degree before experimenting. I seriously doubt whether we have enough of a grasp of the problem to even design a proper experiment.

Even more troublesome is that we are already spending billions of dollars specifically on youth and have little notion as to what these programs are doing or if they are working. In fiscal year 1976 this Government spent $5.4 billion on youth at the Federal level alone. Of this expenditure for youth, $1 billion is being spent on direct job creation; $2.7 billion on education programs; $1.6 billion on training programs not to mention the amounts spent in other areas such as juvenile justice and welfare programs, and those operated by the Veterans' Administration.

These programs cover a variety of different employment-related activities including vocational education, higher education programs, Job Corps, CETA title I of which more than 60 percent is spent on youth, the summer youth employment program where more than half a billion dollars is spent on youth and a variety of other areas. Considerable sums are being spent, in addition, to experiment with the problems of youth in the Office of Education, in the National Institute of Education, and other agencies of the Departments of Health, Education, and Welfare and the Department of Labor. Yet this Congress has not spent any time trying to find out what they have come up with. What seems to be a better course to follow is to understand what we are doing with our current $5.4 billion before throwing another $1.5 billion at the problem.

In sum, I do not oppose efforts to resolve the Nation's serious unemployment problem among youth. I am opposed to spending $1.5 billion based on a lot of preconceived notions, with no understanding of the real nature of the problem, with no effort to find out what we are doing now, and with no assurance that any of these funds will be spent correctly. As the old saying goes:

If you don't know where you are going, any road can take you there!"

This is my view of H.R. 6138, Mr. Speaker, my minority views filed in the report on this bill are as follows:

DISSENTING VIEWS OF CONGRESSMAN ASHBROOK

There are those who might wonder why anybody would be opposed to legislation ostensibly designed to resolve unemployment problems among our nation's youths. I am not; what I am against is throwing $1.5 billion out the window like so much confetti. And this is what we would be doing if we enacted this bill.

I think a review of the legislative process that was followed regarding this youth employment proposal provides an interesting comment on the consideration—or the lack thereof—which this Congress gives to some of our nation's social and economic problems.

Despite the fact that the minority members of our committee have for years talked about the need to target employment dollars to the structurally unemployed and particularly to youth, it wasn't until President Carter submitted his budget message that majority began to respond. And as soon as it became clear that the youth unemployment problem was the "in" issue for the year, those committees with jurisdiction rushed to do something. First, the House and Senate Budget Committees quickly enacted as part of their second concurrent resolution an additional $1.5 billion for youth employment programs, and almost immediately thereafter the House Appropriations Committee reported a bill including $1.5 billion for youth programs. Incredibly, this was done before any of the authorizing committees had even begun to consider a youth employment bill, much less hold hearings to investigate the problem. All the Appropriations Committee indicated was its belief that $1.5 billion ought to be spent in fiscal year 1977 for youth programs, although, of course, they had no firm idea what this involved except for a somewhat general description of the administration's proposal.

The authorizing committees' response to the Budget and Appropriations Committees' actions is instructive, for it reveals the manner in which this Congress really legislates. In effect, the Appropriations Committee had left the $1.5 billion on the proverbial stump. As is too often the case, members of this body reacted by moving as quickly as they could to grab it before someone else did. The first effort was an amendment offered to the public works legislation in the Senate which provided for a new title to that bill containing community service public works projects for youth. This program involved out-of-school unemployed youth who would be employed in labor-intensive, heavy construction. The Senate Human Resources Committee—lacking jurisdiction over public works—feared losing its jurisdiction of the youth issue along with the $1.5 billion. This esteemed committee quickly moved to block the passage of the public works youth employment program. In doing so, it hatched a deal with the administration to the effect that the administration would propose a youth employment package to include the community services program. As a quid pro quo, the public works forces agreed to drop their youth program.

Meanwhile, the House wondered if they would be consulted by the Administration. As events show, we were not. In fact, the Administration failed to consult with the House until just a few days prior to the markup of the bill before us, although it was their clear desire that the House enact their proposal without too much of a shift, as Department of Labor officials stated at the hearings. No one enjoys being told what to do without some chance to comment on it, and the legislation which we reported from this committee is a strong message to the current administration that unless they do some previous prior planning they will pretty much end up wtih poor performance. The House quickly moved to develop their own proposal. In fact, the Subcommittee acted so quickly that on the day the bill was scheduled for markup May 2, in the subcommittee, the chairman confessed he hadn't seen it. Nevertheless, a bill was reported and only 3 days later we reported virtually the same bill from full committee.

I believe that the House bill, despite its hasty drafting, is definitely superior to the one being developed in the Senate. It recognizes that we don't know all the answers and that what we ought to do is experiment before enacting a full-blown, massive, permanent Federal program. If we have no choice in spending $1.5 billion, it's a better way to go, although I believe the bill suffers serious shortcomings and has been made virtually meaningless by the application of prevailing wage.

But I am distressed that we are spending $1.5 billion under any circumstances, when not a single day of hearings has been held on the actual problem of youth unemployment by the authorizing committees. Hearings have been held on specific proposals but hardly a day's time has been spent trying to determine the nature of the youth unemployment problem.

Youth unemployment is a very complicated subject, and is not easily resolved by throwing a billion and a half dollars at it. It involves the school systems and the effect which they have on making youth employable. It involves our socioeconomic problems and the effect which they have on youth. It involves the desires of youth. It involves the availability of long-term career jobs in the private sector. It involves the differing needs of youth, be it in the inner cities or in rural areas. To some extent it involves postsecondary education. It involves the changing nature of our labor market. It involves changes in attitude and family structure. In short, youth unemployment is not easily solved by short-term, make-work, quick-fix public service jobs approaches. Again, I believe that the House bill is superior because it provides for some experimentation. However, we ought to find out first what the problem is to some degree before experimenting, and even here I would charge that neither committee on either side of the Congress has enough of a grasp on the problem to even design a proper experiment. Even more troublesome is that we are already spending billions of dollars specifically on

youth and have little notion as to what these programs are doing or if they are working.

In fiscal year 1976 this government spent $5.4 billion on youth at the Federal level alone. Of this expenditure for youth, $1 billion is being spent on direct job creation; $2.7 billion on education programs; $1.6 billion on training programs not to mention the amounts spent in other areas such as juvenile justice and welfare programs, and those operated by the Veterans' Administration. These programs cover a variety of different employment-related activities including vocational education, higher education programs, job corps, CETA title I of which more than 60 percent is spent on youth, the summer youth employment program where more than half a billion dollars is spent on youth and a variety of other areas. Considerable sums are being spent, in addition, to experiment with the problems of youth in the Office of Education, in the National Institute of Education and other agencies of the Department of Health, Education, and Welfare and the Department of Labor. Yet this Congress has not spent any time trying to find out what they've come up with. What seems to us the better course to follow is to understand what we are doing with our current $5.4 billion before throwing another $1.5 billion at the problem.

In sum, I do not oppose efforts to resolve the nation's serious unemployment problem among youth. I am opposed to spending $1.5 billion based on a lot of preconceived notions, with no understanding of the real nature of the problem, with no effort to find out what we are doing now, and with no assurance that any of these funds will be spent correctly. As the old saying goes: "if you don't know where you are going, any road can take you there!" This is my view of H.R. 6138.

Mr. HAWKINS. Mr. Speaker, I yield 1 minute to the gentleman from New Jersey (Mr. LE FANTE).

Mr. LE FANTE. Mr. Speaker, I rise in support of H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977.

As a member of the Subcommittee on Employment Opportunities, it has been my privilege to participate in the development of this timely and innovative legislation. I particularly wish to commend our distinguished subcommittee chairman, Mr. HAWKINS, for his outstanding leadership and efforts in bringing out a responsive and responsible piece of legislation in the limited amount of time available. Chairman HAWKINS afforded all members of the subcommittee the opportunity to contribute fully to the process of putting together this vitally needed legislation.

Joblessness among youth is an increasingly serious problem. Estimates show that young people aged 16 to 24 represent more than 46 percent of the unemployed workers in the Nation. Moreover, the unemployment rate of 16- to 19-year-olds has consistently been double that of the national adult rate. Among minority youths, the figures are even higher, reaching 37.8 percent for black youths aged 16 to 19 during the first quarter of 1977.

In my own State of New Jersey, which has one of the highest unemployment rates in the Nation, the picture is even worse. While the official rate of unemployment for youths between ages 16 to 19 averaged 19 percent nationwide last year, it was almost 22 percent for the same age group in New Jersey.

No single piece of legislation can solve the chronic unemployment problems faced by this Nation's youth. H.R. 6138 admitedly proposes short-term solutions to structural unemployment problems admittedly proposes short-term solutions which allows us to explore in greater detail various proposals and programs aimed at dealing with the long-term problems.

The Subcommittee held a series of in-depth hearings on the problems of youth employment and on the merits of specific proposals. I believe we were able to get to the heart of the youth employment issue during field hearings which I took part in in New York. We heard many experts testify as to the inadequacies of the response to our Nation's unemployed youth. But even more valuable to the members of the subcommittee was the chance to hear several panels of youths who told us of their frustrations and cynicism concerning the current employment efforts for young people. They told us about the difficulties they had in getting any kind of jobs; they related their desire to work at meaningful tasks, not just make-work or dead end jobs that do nothing for their future employment prospects.

These are the people we are trying to reach with this legislation—the youths who will be participating in the programs we are authorizing today. Young people are this Nation's most precious resource. We owe it to them as the leaders of the future to respond to their employment needs now. I believe this legislation does exactly that.

Mr. Speaker, I urge all my colleagues to support this bill which takes that first important step in making a commitment to our Nation's youth by combatting the unacceptably high rate of unemployment among youths.

Mr. SARASIN. Mr. Speaker, I yield 1 minute to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. Mr. Speaker, I thank my colleague, the gentleman from Connecticut, for yielding this time to me.

I would like to ask this question: Why do we put a phrase like "the prevailing wage" or "the minimum wage" in the bill if on pages 42 and 43 we show people how to get around those provisions? Why do they appear there? Why are they there in the first place?

Why do we not listen to a mayor who is trying to tell us what the problem is? My motivation for bringing this out comes from no other source than that. We are trying to deal with this situation in my State, and the problem there is one of the worst in the Nation.

The unemployment of the youth in the city of Newark has reached desperate proportions. The rate is 30 to 40 percent, as the gentleman from California (Mr. DELLUMS) has cited.

Why has "prevailing wage" been put in the bill if on pages 42 and 43 of the bill people are shown how to get around it? What is the point? Who put it there, and why?

Mr. Speaker, is there any answer to that question? I ask it because really this is a serious matter.

Mr. HAWKINS. Mr. Speaker, if the gentlewoman has time remaining, I will ask her to yield.

The SPEAKER pro tempore. The time of the gentlewoman from New Jersey (Mrs. FENWICK) has expired.

Mr. HAWKINS. Mr. Speaker, I yield myself 2 additional minutes.

Mr. Speaker, this bill has been thoroughly aired in committee for a long time.

Title I has a history of more than 2 years. Quite a bit of discussion has been addressed to the prevailing wage concept.

Mr. Speaker, I can assure the membership that the overwhelming number of jobs will be at the minimum wage. Further, a compromise was effected whereby prevailing wages can be limited by the restructuring of occupations so that practically most of the opposition can be eliminated.

Mr. Speaker, time is of the essence. We do appreciate the fact that we must move in a hurry, since this body has already made available to the Chief Executive of this Nation $1 billion to expend.

If there is any question of whether or not we wish to have any impact on the expenditure of that money which is already made available to the President to spend as he desires under existing authority, the authority in this legislation is not needed for the expenditure of that money. Therefore, if the Congress wishes to have any impact on the expenditure of this money, this is the only way in which to do it.

Mr. Speaker, let me just indicate what a "no" vote actually means. A "no" vote on this bill means that the Congress abdicates its responsibility and turns over completely to the administration the expenditure of $1 billion under existing authority, to spend as the administration so desires, without any impact by this body.

Second, Mr. Speaker, the expenditure of that $1 billion would be under a continuation of youth programs to which training and educational ties are too often not connected.

Mr. Speaker, a "no" vote also means that we will be voting against the involvement of the private sector which we have been able to put into this bill for the first time.

Mr. Speaker, I ask for an "aye" vote on this bill.

Mr. DRINAN. Mr. Speaker, I rise in strong support of the Youth Employment and Innovative Demonstration Project Act (H.R. 6138). This legislation is designed to provide employment opportunities for thousands of our young people who simply have not been able to find a job.

As the economy has improved in recent months, unemployment has dropped in most sections of the country. The average worker is better able to find a job and the employment market shows signs of substantial improvement. But, unfortunately, the prospect of finding a job has not gotten much better for our younger workers.

Mr. Speaker, the 16- to 24-year-old group makes up slightly under a quarter of the civilian labor force, yet they represent more than 46 percent of the unem-

ployed workers. The unemployment rate for youths between the ages of 16 and 19 is particularly disheartening, as it has exceeded 18 percent, or more than double the national unemployment rate, for the last 2 years. During the first quarter of 1977 when the national unemployment rate was 7.4 percent, the unemployment rate for youths age 16 to 24 was 14.3 percent, for white youths age 16 to 19 it was 18.6 percent, and for black youths the same age it was 37.8 percent.

While these joblessness figures are indicative of the problems which young people face in the job market, they only tell half the story. As Prof. Bernard E. Anderson of the Wharton School has commented, "the numbers will not convey the reduced sense of self worth, the dashed hopes and dreams, and the pervasive alienation that can develop among youth when joblessness leads them to believe that they can make no useful contribution to society." In view of these types of problems, the cost of youth joblessness may impose far more serious consequences on society than the loss of productive labor and unemployment compensation payments.

In order to deal with this country's very serious youth unemployment problem, I have consistently been a strong supporter of youth employment proposals. In previous years, I have cosponsored this type of legislation and I voted in favor of the Young Adult Conservation Corps last year when it was considered before the House of Representatives. This year I have drafted my own legislation, the Community Service Youth Employment Act, which is designed to both provide jobs for young people and help communities meet many of their public needs. Accordingly, I am delighted that the House is considering H.R. 6138 today.

Mr. Speaker, the Youth Employment and Innovative Demonstration Projects Act encompasses a number of employment programs for jobless young people. The bill expands the Young Adult Conservation Corp, authorizes the establishment of youth demonstration projects, and provides employment and training opportunities to disadvantaged youths while they attend school. The range of programs which are targeted to youth unemployment in H.R. 6138 promise to make inroads on a very serious problem which we have faced in the United States for years.

I would now like to expand upon the particular provisions in greater detail.

The Young Adult Conservation Corp will be a year-round compliment to the existing summer-only Youth Conservation Corp which has operated so successfully in the past few years. The program will employ persons between the ages of 19 and 24 for a maximum of 1 year. The Corp employees will be paid no less than the Federal minimum wage and they will be housed, wherever possible, in existing but unoccupied or underutilized Government facilities. It is also hoped that suitable arrangements can be made to have educational institutions award academic credit for conservation corp work experience.

Young people who are employed on conservation projects will have a great deal of work in store for them. Going to work in national parks, wildlife reservations, woodlands, and elsewhere on public lands, these youths can accomplish labor intensive projects which would otherwise not be carried out. The Corp will be particularly effective in diminishing the backlog of projects which must be accomplished in the very near future in national parks and forests which have been deteriorating to some extent in the past few years due to lack of funds.

The second major portion of this bill deals with youth demonstration projects. Demonstration and experimental programs can be set up to explore methods of dealing with the structural unemployment problems of youths. While the legislation does not mean to create makework opportunities, it is designed to provide the flexibility which is needed to establish successful job programs.

One of the reasons that demonstration projects were used in H.R. 6138 stems from the fact that all of the answers are not in yet as to the solutions for the problem. More information and experimentation is still needed before a truly long-term youth program is institutionalized. By having the Federal Government work with the States and local agencies and by trying out some of the more innovative ideas, we may in fact be able to establish programs which will lead to sound long-range strategies for the future.

A third major aspect of the legislation involves employment and training opportunities for disadvantaged youths who are still going to school. Youths would be entitled to part-time work not to exceed 20 hours a week during the school year and a full-time summer job when these individuals meet certain criteria. This provision will not only help a student stay in school but lead to training prospects which could lead to long-term jobs.

Mr. Speaker, we can no longer ignore our unemployed youth. The future prosperity of the Nation is dependent upon the creativity of our young people, and we must insure that this talent is utilized to the fullest extent possible. For this reason, I enthusiastically support the passage of H.R. 6138.

Mr. ZEFERETTI. Mr. Speaker, we are all aware of today's high rate of unemployment and the implications it has on the American economy. We have heard numerous proposals on how to reduce unemployment, but surely we must begin to attack the problem where it is most severe. It is for this reason that I wholeheartedly support passage of H.R. 6138, the Youth Employment and Training Act of 1977.

By now we are all familiar with the figures—a 17-percent unemployment rate among teenagers, and double that rate for black youths. But that figure does not reflect the severity of the problem in our urban areas such as New York City, where the rate of unemployment among teenagers is even more staggering.

The problem is not a lack of desire to work on their part. These people want to work, not rely on welfare. The jobs are simply not available, and the situation is worsening. If we continue to ignore youth joblessness we are courting future disaster when today's youth becomes tomorrow's middle-age Americans with little or no job skills.

The real tragedy is not only the fact that this national resource is being wasted, but also the ripple effect it has on other aspects of our society, particularly crime. Out of idleness and frustration, many of these potential workers turn to crime and vandalism. Well over half of the major crimes committed last year involved youth under the age of 25.

It is estimated that vandalism in our schools is costing the American taxpayer over $600 million per year. Street crime has been a surrogate for employment and vandalism is an alternative to boredom. Other consequences of youth unemployment include alcoholism and drug abuse.

The bill we are considering today is an excellent start toward alleviating these problems. The Youth Employment and Training Act of 1977 is an investment in human capital whose potential benefits far outweigh the initial costs. I am confident that my colleagues understand the importance and necessity of the disproportionate burden of unemployment shackling today's young Americans and will overwhelmingly approve the bill.

Mr. BOLAND. Mr. Speaker, I rise in support of H.R. 6138. The Youth Employment and Innovative Demonstration Projects Act of 1977 is an important piece of legislation. The Committee on Education and Labor estimates that this bill will create over 200,000 jobs. I do not think anybody will quarrel with the fact that those jobs are desperately needed right now. This bill is an important step in lowering the intolerably high unemployment rate among the young.

I am particularly pleased to support title I of this bill. I have long supported an extension of the Youth Conservation Corps program. The creation of the Young Adult Conservation Corps is, I believe, the necessary and logical extension of the excellent YCC program. The jobs created by the Corps are not "makework" jobs. They result in tangible benefits to Federal, State, and local lands. Dollars spent under title I reap two harvests—needed jobs for young adults and necessary resource management. This money is well spent.

H.R. 6138 does not end the problem of unemployment among our youth. It represents, however, definite progress toward reducing that unemployment. Funds authorized by this bill will go toward the development of demonstration programs to test new approaches to the problem of youth unemployment. It then will be an incentive program designed to keep youth in school by guaranteeing them part-time employment. CETA prime sponsors will be able to develop similar programs to deal with a problem that has already been too long with us. Funds will also be available for innovative projects and programs aimed at the special problems of employment training for youth. As I mentioned, these are not the absolute answers to this pressing problem. This bill does allow us to gain experience in different ap-

proaches for dealing with youth unemployment. That experience will be needed next year when the Comprehensive Employment and Training Act is reexamined.

Mr. Speaker, it will, of course, be up to the Department of Labor and the CETA prime sponsors to make this program work. I am certain they can. I expect a great deal from this program, because I perceive the problem to be a great one. If we do not take steps now to foster the employment opportunities for our youth, this Nation will face serious economic difficulties in the near future. We can take measures now to forestall those problems. H.R. 6138 is one such measure and I urge my fellow Members to support it.

Mr. FORD of Michigan. Mr. Speaker, I rise today to urge my colleagues' support for H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977. The problems which this bill addresses are critical; the programs which it offers are creative first steps to solve youth unemployment problems.

By passage of this act, Congress will recommit the Federal will to encourage the development and self-sufficiency of our youth, to minimize the country's high unemployment among youth, and through the Young Adult Conservation Corps (YACC) put the energies of our young people to the task of improving our Nation's public lands and natural environment. The House passed a similar bill last year which died in the Senate.

Title I of this act provides a particularly well proven and popular first step toward eliminating youth unemployment, the Young Adult Conservation Corps (YACC). Public support for the YACC concept is quite high. According to the latest Harris poll which appeared in the New York Post on May 2, 1977, Americans by a margin of 59 percent to 31 percent approve of a program setting up 3-year, noncompulsory camps for teenagers.

But the American people do not just want our youth off the streets and put into "make-work" kinds of projects. Our people want a program that will reduce youth unemployment by providing meaningful employment opportunities and supportive services so that youth can continue or resume their education and become more responsible and productive citizens. Thus, the idea of the Young Adult Conservation Corps, an idea proven effective 40 years ago, attracts the imagination of our people.

However, the YACC, whether it proves as effective today as during the Depression or not, cannot be the only means of alleviating youth unemployment. We must continue to develop new ideas and search for more meaningful programs for our youth. That is why the "innovative demonstration projects" section of this bill is so crucial. H.R. 6138 adds a new provision to title II of CETA to authorize the establishment of pilot, demonstration, and experimental programs to explore methods of dealing with the structural unemployment problems of youth. It specifically states that it is not the bill's purpose to provide make-work opportunities for youth. Rather, the bill directs that funds be made available for projects which are designed to make a significant long-term impact on the structural unemployment problems of youth. Programs are to serve low income youths, in particular, but 10 percent of the funds is reserved for innovative programs that include youths from all economic backgrounds.

Mr. Speaker, I believe that the innovative demonstration projects section of this act is a realistic and rational approach to creating solutions to the youth unemployment problem. It is an approach which allows for learning as much as we can so that when CETA is reauthorized next year, the Congress will have a better idea as to what types of programs actually work. Of all the witnesses that appeared before the Subcommittee on Employment Opportunities, not one had a definitive answer as to what would solve the problem of chronic youth unemployment. All agreed that a variety of methods should be tested and that the educational system should be linked with whatever approach was finally agreed upon. H.R. 6138 does provide for that variety and does link the educational system into these approaches. I am convinced that this approach offers the best possible solution, in the long run, to solving the problem of chronic youth unemployment.

Mr. Speaker, while a battery of statistics does not speak in human terms, it is helpful to grasp the size and nature of chronic youth unemployment. For each of the past 3 years, the unemployment rate for youths age 16 to 19 has exceeded 15 percent, or more than double the national unemployment rate; the unemployment rate for all young people (16 to 24 years) has not been much lower (14.3 percent). In fact, in some urban categories, the youth unemployment rate is as high as 42 percent. Perhaps the most striking statistic, however, is that youth aged 16 to 24 represent more than 46 percent—or almost half—of the unemployed workers in the Nation. Clearly, youth unemployment is a critical problem, critical enough to warrant the attention of the major Western World leaders at the economic summit meeting in London this month.

Yet, as I stated before, these statistics describe only part of the problem. The words of Prof. Bernard E. Anderson of the Wharton School, in testifying before the Subcommittee on Employment Opportunities, eloquently express the crucial human aspect of chronic youth unemployment:

> [Unemployment statistics] will not convey the reduced sense of self worth, the dashed hopes and dreams, the pervasive alienation that can develop among youth when joblessness leads them to believe they can make no useful contribution to society. In many ways the noneconomic cost of youth joblessness might impose more serious consequences on society than the narrowly measured economic cost of high unemployment and lost income.

For these reasons, Mr. Speaker, I am asking my colleagues to cast a vote for the future of this country by supporting passage of H.R. 6138.

Mr. LEGGETT. Mr. Speaker, in view of the recent public debate over whether President Carter's economic priorities run to controlling inflation or reducing joblessness, I am especially pleased that the House is coming forward today with a measure that attacks our economic problem carrying the most immediate human cost-unemployment. This Youth Employment and Training is a far-seeing proposal which is designed in part to help break the cycle of hopelessness that creates what we call the hard-core unemployed. I believe that the Youth Incentive Entitlement will become a significant tool in encouraging young people to complete their basic education, therefore making them more employable.

Title I of this bill enacts a program which I have advocated and cosponsored over several years, the Young Adult Conservation Corps. This marriage of needs, the combination of our requirement for resource management work on public lands and for suitable employment for the age group in which unemployment is highest must be, if not made in heaven, at least highly regarded there. I am particularly pleased that this proposal includes all unemployed youth regardless of family background. It is my belief, and the Committee on Education and Labor received testimony to this effect, that the sort of economic integration in pursuit of a common goal envisioned in this bill will return inestimable social benefits in coming years.

Unemployment, in my view, carries the most serious long-term implications for our society of any problem we face. No effort spent in attacking this problem is too great, but innovative and pragmatic strategies are required. I believe this bill meets those criteria, and I am proud to support its passage.

Thank you.

Mr. CONTE. Mr. Speaker, I would like to take this opportunity to commend the authors of this bill to authorize the establishment of a year-round Young Adult Conservation Corps, youth incentive demonstration projects, and innovative demonstration projects. Many of my fellow colleagues are aware of my strong commitment to reducing our Nation's high unemployment problem—a problem which affects all individuals, young and old. It is especially important for us to recognize the current plight of a young person today seeking productive work with thoughts directed toward pursuing a career. Young people between the ages of 16 to 24 comprise only one-quarter of the total labor force, but 46 percent of all unemployed workers.

As I have said time and time again, one of the best programs that ever came out of the New Deal era was the Civilian Conservation Corps. The provision of lasting benefits in the form of environmental and conservation work, combined with good solid jobs, are goals which are admirable in themselves as well as good for the American economy. And to recreate such a program for our youths is even more commendable, as it provides them with gainful employment which enhances their self-motivation and direction.

As a cosponsor of the original legisla-

tion for a Young Adult Conservation Corps, I am very pleased with the programs extended and created under the Youth Employment and Training Act, using the appropriation of $1.5 billion as approved as part of the economic stimulus appropriation.

It is also important to acknowledge that the Youth Conservation Corps has already been fully authorized in the amount of $60 million. This summer program will complement the year-round YACC by providing young people between the ages of 15 and 18 with important summer jobs while they are still in high school.

Mr. Speaker, I urge my colleagues to support this worthy bill.

Mr. DICKS. Mr. Speaker, the President in his legislative recommendations has provided strong recognition to the urgent need to provide employment opportunities for this Nation's youth. In the economic recovery package sent to the Congress on January 31 he requested a number of specific programs to meet this goal.

This bill, H.R. 6138, is a positive first step in reaching that legislative objective. It creates a Young Adult Conservation Corps for youth between the ages of 16 and 24. This program will build on the existing and successful Youth Conservation Corps. While the YCC provides summer work experience the Young Adult Conservation Corps would allow applicants to work for up to 12 full months and will operate year round.

A similar bill, H.R. 10138, passed the House in the last Congress by a very substantial margin was not, unfortunately acted upon by the other body.

The Young Adult Conservation Corps is designed to reduce the current volume of resource management work that needs to be done on our Nation's public lands. As a member of the Interior Subcommittee of the Appropriations Committee I have become painfully aware of this situation.

The YACC would be administered by the Secretaries of Agriculture and Interior through interagency agreements with the Secretary of Labor, similar to the way that Job Corps Civilian Conservation Centers are currently handled. The Departments involved have assured us of their capacity to operate both the YCC and YACC programs simultaneously because they are aimed at different groups and operate during different periods.

The requirement that applicants must be unemployed and have completed high school or dropped out of school for reasons other than joining the Corps will insure that this program will be able to directly address the youth unemployment situation. If applicable, academic credit may be awarded to help those in need of completing their education. Earnings received by youth in these programs would be disregarded in determining eligibility for, and the amount of, any benefits for other family members based on need under other Federal programs. In this way there will not be a family disincentive for those most in need of employment under the program.

The provisions for a youth incentive entitlement and demonstration project under title II establish experimental programs to explore methods of dealing with the structural unemployment problems faced by our youth and, I feel, are especially promising.

This program is not a pork barrel for one particular region of the country. Preference in employment would be given to applicants who reside in areas of substantial unemployment and 30 percent of the funds provided under title I would be allocated to the States based on their total youth population.

I was happy to join with my colleague from Washington, Mr. MEEDS, who has long been an advocate of this concept, in sponsoring H.R. 30, a similar bill to H.R. 6138. I commend the committee for the fine work it has done in reviewing and developing this legislation and strongly urge its passage.

Mr. PEASE. Mr. Speaker, I rise in support of H.R. 6138. Title I, which creates a Young Adult Conservation Corps (YACC), is of special importance and special interest to me.

High unemployment among young adults is a problem in Ohio as it is throughout the Nation. The Congress has enacted legislation to extend the Public Works Employment Act. Hopefully, these efforts will result in a sizable reduction of the unemployed. However, while we are creating jobs for workers in depressed industries who have been laid off because of cyclical fluctuations in the national economy, we must also strive to provide jobs for young people looking for their first jobs.

I have been a proponent of creation of the YACC for some time. In the Ohio legislature, I pushed for participation in such a program. When I came to Congress last January, I became a cosponsor of legislation to create the YACC and I have actively promoted it.

The YACC is modeled after the Civilian Conservation Corps of the 1930's and the Youth Conservation Corps created in 1970. It is a tried and proven approach to youth employment programing. The YACC would provide gainful employment to many of our young people, while reducing the tremendous backlog of work to be done on our public lands. It will give young people jobs that are meaningful because they give unemployed youth a sense of contributing to society while they learn a variety of work skills.

The time is right, the need is apparent, and the public support is there for Congress to enact legislation to provide jobs for our young people. I urge your support for this responsible legislation that will help revitalize our national economy. This reasoned, balanced approach to public service employment will tackle head-on the inter-related problems of youth unemployment and high juvenile crime rates.

Mr. DUNCAN of Oregon. Mr. Speaker, I rise in support of H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977. Specifically, I am pleased to speak regarding title I of that act which would amend the Youth Conservation Corps Act by authorizing creation for 3 years of a Young Adult Conservation Corps to be jointly administered by the Departments of Interior and Agriculture. Title I is similar, though not identical, to the bill I have introduced, H.R. 353, which would revive the Civilian Conservation Corps.

As you will recall, a bill which I cosponsored and which was introduced by Congressman MEEDS passed the 94th Congress last year by a vote of 291 to 70. Only a technical conflict with the Budget Act kept the bill from reaching the White House. That bill is essentially the same as title I of H.R. 6138. I expect this bill to pass the House again and am confident that in this session the bill will be enacted into law.

While my support for title I is unqualified, I hope I may be forgiven for suggesting that the details of my bill are preferable. I consider it inadvisable and unnecessary to have the Department of Labor involved in the administration—especially when the President is dedicated to simplifying Government and eliminating overlapping bureaucracies. I think it unwise to deny use of corpsmen on privately owned small woodlots and rangelands where cooperative programs are already authorized on a cost-sharing basis by existing law. Two-thirds of our timber potential lies in those holdings and they are most in need of help.

But these are details. The important thing is the program. We can improve it as time goes by and the public lands can use all the help we can give them at the moment.

The purpose of title I and all the other CCC related bills is primarily to find work for those hardest hit by unemployment, the urban youth of this Nation. But there are incidental and related benefits. For example, the urban crime rate should be reduced as the same youngsters are taken off the streets and put into productive employment. The program will also result in an infusion of labor intensive capital into the natural resources of this country, an area neglected too long by both political parties. It is a productive program, not paper shuffling. We still enjoy the trails and roads and camp sites built by the old CCC and we are beginning to harvest the trees the corpsmen planted. It produces wealth and therefore should not be inflationary. And its major product will be the productive, useful men and women it will produce.

This is also a program which is overwhelmingly supported by the Nation. A recent Gallup poll showed that 85 percent of those surveyed favored federally sponsored program youth camps such as the CCC. I believe the reason for that response is directly tied to the multipronged purpose I mentioned, plus a nostalgic fondness for the old CCC, a program which has been generally recognized as the best of the New Deal programs initiated by Franklin Roosevelt.

At its height, in 1935, the Civilian Conservation Corps numbered a half million men scattered in more than 2500 camps under supervision of the old War Department. The Corps was made up of young men from our Nation's troubled cities, scarred by the stigma of unemployment and with no hope for a job.

Unemployment is the No. 1 target of this Congress. In our zeal to act, I think we should look carefully at who are most affected by unemployment. The unemployment figures that I read points to the young people of this Nation as being the hardest hit by unemployment. We generally find that the rate for nonwhite teenagers is about 37 percent, and for white teenagers 17 percent. The economic and social implications of those figures, which are probably on the conservative side, are staggering. Many leading economists have said that a well-planned jobs program targeted at those between the ages of 16 and 24 is the best way to cut our overall unemployment figures, as well as to avert serious social consequences.

Probably the greatest problem associated with youth unemployment is that of time, and unquestionably idle time leads to crime. Criminal action becomes a much more attractive and viable option if one is unemployed, especially among the young. There is no question in my mind that our crime rate is far too high, and I think the answer to the problem is getting those young men and women who are potential criminals jobs. I think we all realize that unemployment leads to a never-ending circle of further unemployment, welfare and crime. Title I will help break that circle and give young men and women a chance that they do not now have.

Because I sit on the Interior and Related Agencies Subcommittee of the Appropriations Committee, I am most concerned about the necessary steps we must take to improve our natural resources. One thing has remained constant since the time I left Congress in the 1960's and my return in 1974, the great natural resource agencies have been and are starved by the Office of Management and Budget and its predecessor, the Bureau of the Budget, as they strived to compete with all other Government programs for a share of the Federal tax dollar. Inadequate capital investment coupled with excessive use in the past have resulted in the following: First. Our outdoor recreational facilities have deteriorated and many campgrounds and picnic facilities have been closed or abandoned. Second. Millions of acres of timberland lie fallow and unproductive because we have not spent the money and made the effort to replant. And this is at a time of rising lumber prices, increasing demands for wood products, and ever-increasing pressure from groups to diminish the harvesting of trees. Third. Millions of acres of rangelands are today capable of carrying only low allotments of livestock because they have been overgrazed and the waterholes stomped dry. Continued grazing with no efforts of rehabilitation results in further deterioration. Not only do we lose the capacity to convert forage unpalatable to humans in the useful protein to help feed a hungry world, but as the sagebrush and the bitterweed take over from the bunch grass and the crested wheat, reduced forage for the wildlife results in the diminution of their numbers. The drought in the West has only aggravated these already critical problems.

All of this work is labor intensive requiring many people and only simple tools and equipment readily available. And by so doing, we will not only be rehabilitating those who do the work, but we will be insuring the productivity of the land for those who come after us.

I have briefly summarized the benefits that title I of this bill will help bring to the American people. But there are other benefits to be derived from title I and those are mainly intangible benefits. The old CCC established a spirit among its members which endures to this day and in my own State there is not a segment of our lives which has not been leavened with the presence of former corpsmen. We find them in the top echelons of business, government, labor, and agriculture. Such things as leadership, civic pride, and spirit are nearly impossible to measure, but those are the truly lasting benefits of the old CCC. Those qualities are the things which distinguish the CCC from other jobs programs. And that is why the CCC holds such a unique place in American history. With the passage of title I and this bill we can again revive the spirit of the old CCC and begin to whittle down further our unemployment figures and at the same time offer a second chance and some hope to those young people who have been locked in the grips of despair for too long.

I ask for support from all of you on this bill which so many of you have worked tirelessly on. I am pleased to have had some input on this title, but I gratefully acknowledge the role of the chairman, the members of the committee, Congressman MEEDS, and the Speaker himself who has been a strong supporter.

Mr. BIAGGI. Mr. Speaker, the 95th Congress has already amassed an impressive record enacting legislation to put more Americans back to work. We have already seen signs of improvement. Last month our unemployment rate dropped to its lowest level in almost 2 years.

Today we are considering an extremely important bill which seeks to deal with a group that has suffered higher levels and longer periods of unemployment than others in this Nation—namely youth. The Youth Employment Act is a comprehensive and ambitious measure which provides a better economic future for thousands of young Americans.

I am proud to be a member of the House Education and Labor Committee which conceived and considered this bill. H.R. 6138 represents a sound fiscal investment for the future of this Nation. It deserves our unqualified support.

The unemployment figures among youth in this Nation are both shocking and intolerable. It is estimated that almost one-half of the total unemployed of this Nation are between 16 and 24. Youth unemployment averages twice the national level. Among selected groups of youth, particularly black youths, the unemployment rate runs in excess of 35 percent.

Congress in the past has not been oblivious to the youth unemployment problem. We have responded, but our solutions were short term and largely incomplete. Today we have a bill which will give young people employment for more than just the summer. We are providing in this bill year-round, substantive and meaningful employment for eligible young people. For example, the Youth Conservation Corps established in legislation passed in 1976 established hundreds of thousands of summer jobs for young people. The program has worked, but many of those employed under the bill were cut off at the end of the summer. H.R. 6138 will make the YCC program year round to employ persons between 19 and 24 who have completed school.

Other important features of the bill include the creation of a new part C of title III of CETA to authorize pilot, demonstration and experimental programs designed to find the causes of and offer solutions to the problem of youth unemployment.

In essence this legislation represents a positive response to a critical problem. We must view this legislation not only from an economic standpoint but a law enforcement standpoint. We are aware that the crime rate among young people is growing at an alarming rate. For many young people, crime represents a response to the frustrations of unemployment. One more young person gainfully employed might mean one less young person roaming the streets. We know that many thousands of young people presently unemployed want to work. This is evident quite clearly when we hear reports of many thousands of young people showing up at employment offices to fill several hundred jobs. The idea is to provide more jobs which can be filled.

H.R. 6138 represents an important commitment to the youth of this Nation. Both the Congress and the administration recognize the compelling need to provide more jobs for the youth of this Nation. In addition to this legislation we have enacted several other key legislation proposals which will provide employment for young Americans. This legislation is unique because it establishes a mechanism by which the problems of youth unemployment can be monitored on a regular basis and our response can be adjusted to meet special needs.

I am pleased to be associated with the development of this important measure. Special credit should be given to my colleague from California, Mr. HAWKINS, for his leadership on behalf of this bill. Passage of this bill today will be a tribute to him and will represent the continuation of the commitment of this Congress to the problem of unemployment.

The SPEAKER pro tempore. All time has expired.

The question is on the motion offered by the gentleman from California (Mr. HAWKINS) that the House suspend the rules and pass the bill H.R. 6138, as amended.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. HAWKINS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 6138, as amended.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

CONTROLLED SUBSTANCES ACT EXTENSION

Mr. ROGERS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5742) to amend the Controlled Substances Act to extend for 3 fiscal years the authorization of appropriations under that act for the expenses of the Department of Justice in carrying out that act.

The Clerk read as follows:

H.R. 5742

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 709(a) of the Controlled Substances Act (21 U.S.C. 904(a)) is amended—

(1) by striking out "and" after "1976,",

(2) by striking out "June 30, 1977" and inserting in lieu thereof "September 30, 1977, $190,000,000 for the fiscal year ending September 30, 1978, $215,000,000 for the fiscal year ending September 30, 1979, and $240,000,000 for the fiscal year ending September 30, 1980", and

(3) by striking out "(other than its expenses incurred in connection with carrying out section 103(a))".

(b) Section 103 of such Act (21 U.S.C. 803) is repealed.

The SPEAKER pro tempore. Is a second demanded?

Mr. CARTER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Florida (Mr. ROGERS) and the gentleman from Kentucky (Mr. CARTER) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I am pleased to present to this body legislation to extend the authorizations of appropriations for 3 fiscal years for the Drug Enforcement Administration in the Department of Justice to carry out its law enforcement and regulatory responsibilities under the Controlled Substances Act. The Controlled Substances Act is the primary Federal statutory authority for drug abuse law enforcement and for regulatory activities aimed at controlling abusable drugs distributed from illicit sources as well as those diverted from legitimate channels of trade.

The legislation proposes a simple 3-year extension of the appropriations authorizations which are due to expire at the end of the current fiscal year, 1977. In addition it merges the separate appropriation authorization under section 103 for administrative activities of the Drug Enforcement Administration with the appropriation authorizations under section 709 for the administration and enforcement activities of the DEA.

The proposed authorization levels for the next 3 fiscal years total $645 million. This total represents a new authorization of $627 million for the next 3 fiscal years since the bill repeals the ongoing annual $6 million appropriations authorization under section 103 of the act. The total authorization is comparable to a total level of $498 million for the 3 fiscal years 1975, 1976, and 1977 under existing law.

The Subcommittee on Health and the Environment held hearings on the proposed legislation, and it was ordered reported by unanimous voice vote in both the subcommittee and the full Committee on Interstate and Foreign Commerce.

Testimony on this legislation at hearings conducted by the Subcommittee on Health and the Environment this year reaffirmed the need for an effective law enforcement and regulatory program directed at drug abuse prevention and control. The testimony indicated that heroin addicts alone are responsible for 19 percent of all property crime in the United States at an economic cost of $3.65 billion annually and incalculable social costs in human suffering and wasted potential for productivity.

Although much more needs to be done in the area of drug abuse law enforcement, DEA has revealed significant achievement in carrying out these responsibilities. In 1976, total DEA arrests for high-level heroin traffickers represented a 26-percent increase over the 1975 total. DEA has reported that between fiscal years 1975 and 1976 there has been almost a twofold increase in the number of conspiracy prosecutions and convictions of major illicit drug traffickers.

The testimony of the Drug Enforcement Administration before the subcommittee indicated that the heroin purity level dropped from 6.6 percent in March 1976 to 5.8 percent in March 1977. I am not convinced that this measurement and other suggested measurements are entirely valid and reliable as indices of heroin availability and abuse. However, I would urge that the Drug Enforcement Administration, the National Institute on Drug Abuse, and other Federal and State agencies continue and increase their efforts to develop meaningful methods of data collection, measurement, and assessment.

The total number of heroin addicts currently in the United States has been estimated by various individuals and organizations at between 400,000 and 800,000.

There is obviously a need for the development of a reliable and valid method of pinpointing estimates of the size of the heroin addict population. Through new and improved methods of information retrieval, we now have more reliable estimates of the total annual number of heroin deaths. These estimates reveal that the total number of heroin deaths in the United States has continued to rise steadily on an annual basis since 1974. In fiscal year 1974, 1,465 heroin deaths were reported. This level was reported to have increased to 1,840 in fiscal year 1976, although there were indications that heroin deaths during the last 3 months of fiscal year 1976 decreased from the level of the preceding 3-month period.

I am hopeful that this latest indication of a decrease signals a long-term trend of reduction in heroin use and heroin deaths, but I believe it is premature to draw this conclusion.

Despite the impressive achievements of DEA in its drug abuse law enforcement and regulatory compliance activities, it still appears to me that heroin and other abusable drugs flowing into this country are certainly not in scarce supply. I believe that DEA needs to augment its current non-law-enforcement activities in conjunction with the State Department and other appropriate Federal agencies and foreign governments and their appropriate ministries and agencies to eliminate the sources of these drugs and to prevent potential new sources from developing. As a practical matter, it is only through such coordination that the flow of heroin and other abusable drugs into the United States will be substantially curtailed.

I commend these agencies and foreign governments for the actions they have taken to date. In particular, I would point out that the DEA and the State Department in their recent efforts worked with the Mexican Government to destroy thousands of poppy fields which, if harvested, could produce many tons of heroin.

In 1976, in fact, the poppy eradication program succeeded in destroying 28,280 Mexican poppy fields capable of producing 78 tons of 6 percent pure heroin. This year, between January 1 and April 10, this program succeeded in the eradication of an additional 25,479 poppy fields capable of producing 73 tons of 6 percent pure heroin.

I believe there is a need to continue to augment this program and to develop similar programs in other countries which are currently sources of heroin and which could become the primary heroin sources for the United States in the future. Also, additional intelligence gathering and analysis and information exchange resources need to be developed, and existing resources improved, in DEA, State Department, and other appropriate agencies in conjunction with other foreign governments.

The subcommittee intends to conduct additional oversight activities in the drug abuse law enforcement and regulatory area during the 95th Congress and to consider legislation to revise the Controlled Substances Act as necessary and consistent with foreseeable needs. The subcommittee invites the new administration and other interested parties to review existing programs and their implementation and to make recommendations with respect to these activities.

Mr. Speaker, I want particularly to thank and commend the activity of the

gentleman from Kentucky (Mr. CARTER), the ranking minority member on the subcommittee, and his staff, whose interest in the drug abuse enforcement programs in the Department of Justice has been demonstrated over the years. In addition, I want to thank the gentleman from West Virginia (Mr. STAGGERS) for his leadership on this legislation as chairman of the full committee. Finally, I want to express appreciation to all the other members of the Subcommittee on Health and the Environment, Mr. SATTERFIELD, Mr. PREYER, Mr. SCHEUER, Mr. WAXMAN, Mr. FLORIO, Mr. MAGUIRE, Mr. MARKEY, Mr. OTTINGER, Mr. WALGREN, Mr. BROYHILL, Mr. MADIGAN, and Mr. SKUBITZ, for their fine contributions and support of this legislation.

Mr. Speaker, I strongly urge you and my colleagues in the House to support this legislation for the continuation of the authorization of appropriations for our Nation's drug abuse law enforcement effort.

GENERAL LEAVE

Mr. ROGERS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of the legislation now under consideration.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CARTER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this bill does just as the chairman, the gentleman from Florida (Mr. ROGERS) has said, it extends for 3 fiscal years the authorization of appropriations for expenses of the Drug Enforcement Administration of the Justice Department at a total of $645 million. However, this bill also repeals the $6 million which is authorized for the hiring of additional agents under section 103 of the Controlled Substances Act over a 3-year period thus leaving a total of $627 million of new authorization.

As my good friend the distinguished gentleman from Florida (Mr. ROGERS) has said, the cost of heroin addict property related crime is more than $10 million per day or about $3.65 billion each year. That amount does not include the cost of drug law enforcement and treatment programs, nor the inestimable cost of human suffering.

At the present time the DEA employs over 4,000 people. There are 2,000 agents, almost 500 are in regulation and compliance, 300 in State and local enforcement, 500 in drug-trafficking intelligence, and 30 individuals in research and development. DEA also has 64 offices in 39 countries overseas.

Mr. Speaker, the arrests for high level heroin traffickers—class I—represented a 26-percent increase in 1976, but I regret to say that in my honest opinion we have not been too effective in our drug enforcement. It was reported that we had 1,465 deaths from heroin in 1974. This number has increased in 1975 to 1,698 and in 1976 to 1,840. There has been an increase in the number of deaths in the United States from this tragic habit. Even though the figures for the last quarter of 1976 do show a decline in deaths, I do not believe this change can be interpreted as the beginning of a long-term trend. We need to monitor this situation carefully.

It is evident that heroin can be easily obtained. This I regret, although, over the years, we have tried to stem the flow of heroin into our country. In 1972 we did this through an arrangement with Turkey in which Turkey agreed to prohibit opium—gum—production and we pledged $35 million to help compensate for the economic impact of this production change.

However, we get heroin now from Mexico. Eighty to ninety percent of the heroin supply today comes from there. We have had an arrangement by which we have lent six planes to Mexico and also aids, in 1976, which destroyed on one occasion some 28,000 fields of poppies, and recently some 25,000 poppy fields which would have produced 151 tons of 6 percent heroin.

Mr. Speaker, this was very effective, and very helpful, but the opium still comes in large amounts across the border. We have too much here at the present time. Some have suggested that DEA should be merged with the Federal Bureau of Investigation. I am not so sure that this should not be done because we have too many drug-related deaths; we have too much crime. The drug abuse problem is costing us too much in health and money.

Mr. GILMAN. Mr. Speaker, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from New York.

Mr. GILMAN. I thank the gentleman for yielding.

I want to commend the gentleman from Kentucky (Mr. CARTER), the ranking member of the subcommittee, and the gentleman from Florida (Mr. ROGERS), the chairman, for focusing attention on this highly critical problem.

Mr. Speaker, I want to take this opportunity to express my support for this measure, H.R. 5742, authorizing new budget authority for the Drug Enforcement Administration. As a member of the House Select Committee on Narcotics Abuse and Control, I have become acutely aware of the critical narcotics problem confronting this Nation.

The Drug Enforcement Administration, under the dedicated leadership of Peter Besinger, has been instrumental in a growing number of narcotics seizures, and in the stoppage of narcotics trafficking both domestically and internationally. While the work of the DEA in the past few years has been highly commendable and laudable, I believe that an increase in funding would be not only beneficial, but essential for the sustenance and maintenance of its enforcement work that has become so necessary.

Our law enforcement officers are pitted against the sophisticated operations of highly organized crime, and the level of drug related crimes has risen dramatically within the last few years, reaching a figure of $17 billion last year. The Justice Department has stated that narcotics crime is costing the American taxpayer $10 million a day, and that 19 percent of property crime is committed by heroin addicts. While these figures are startling, pointing to the urgent need for stronger and more effective enforcement efforts, We must not overlook the toll in human lives as a result of narcotics abuse. Last year, over 5,000 young Americans died of overdoses and more than 800,000 of our citizens are addicted to "hard drugs." The psychological and social effects that narcotics abuse has on young lives is immeasurable.

This legislation grants the Drug Enforcement Administration new budget authority of $190 million for fiscal year 1978, $215 million for fiscal year 1979, and $240 million for fiscal year 1980. These funds are authorized to continue for 3 years the programs under the Controlled Substances Act, and repeals the act's separate annual authorization for justice agents.

As a member of the House Committee on Narcotics, the need for more effective coordination of narcotics related agencies has become increasingly clear. There is an immediate mandate to halt the flow of narcotics along the 2,000-mile Mexican border; 80 to 90 percent of the heroin on the streets of America being "imported" from Mexico. The members of our Narcotics Select Committee saw first hand the techniques of smuggling and the severity of the problem on our recent trip to the Mexican border. Over $10 billion of narcotics is smuggled to the United States annually, causing a problem which reaches into all facets of American life.

Accordingly, I urge my colleagues to join with me in their support of this important authorization, and to pledge their support for waging an all out war against narcotics. I cannot stress strongly enough the urgency, and the importance of combatting and stamping out the formidable criminal organizations engaged in narcotics trafficking. It is essential that all of us—the Congress, the executive branch, as well as State and local governments—join together in this effort, an effort against one of the most insidious and debilitating miseries that plagues our Nation—narcotics abuse.

Mr. CARTER. I thank the distinguished gentleman for his contribution, but I regret to say, Mr. Speaker, that there is too much heroin in the United States today. I hope that the DEA will do a better job. Of course, DEA was created in 1973 by combining other drug enforcement agencies' functions including the Bureau of Narcotics and Dangerous Drugs, the Narcotics Enforcement section and the U.S. Customs Service, the Office of Drug Abuse Law Enforcement, and the Office of National Narcotics Intelligence, and also a segment from the White House Office of Science and Technology. All were combined under DEA.

Mr. Speaker, I certainly feel that we should have oversight hearings and demand more action and better work from this particular agency. It is my feeling, too, Mr. Speaker, that we should have careful oversight hearings to see that the personnel are trained and that they are doing the job. I support this legislation, but I would hope that in the future we can strengthen it so as to rid our country of this terrible drug habituation.

Mr. Speaker, I reserve the remainder of my time.

Mr. KASTENMEIER. Mr. Speaker, I wanted to take the occasion of our consideration of this bill to extend the authorization of the Drug Enforcement Administration for 3 additional years to note what I believe to be a serious deficiency in our current drug law—namely the classification of marihuana as a schedule I controlled substance, subject to some of the harshest criminal penalties under the law.

Under the Controlled Substances Act, which the DEA is authorized to enforce, marihuana is classified under schedule I along with heroin, LSD, mescaline, peyote, and other such "hard drugs" despite the fact that most scientific studies have shown that marihuana is not seriously harmful to either the physical or mental health of the individual user when taken in moderate amounts.

Under the Controlled Substances Act, simple possession of any amount of marihuana is subject to penalties of up to 1-year imprisonment and $5,000 in fines. This is excessive, in my view, and unreasonable in light of what we now know about marihuana.

Back in 1972, the National Commission on Marihuana and Drug Abuse, after one of the most exhaustic studies of the issue ever undertaken, concluded:

> Marihuana's relative potential for harm to the vast majority of individual users and its actual impact on society does not justify a social policy designed to seek out and firmly punish those who use it.

The National Institute on Drug Abuse, charged with the responsibility of reporting yearly to Congress on research related to marihuana and health, in six consecutive annual reports has never concluded that marihuana use poses a significant health hazard.

According to an April 1976 survey conducted by the National Institute on Drug Abuse, 35 million Americans have tried marihuana at least once, while 13 million Americans are considered current users. I would wager a bet that almost every one of us in this body knows at least one person who has used or uses marihuana. I am also relatively certain that we would not classify those persons as criminals.

Yet, under the law, that is exactly what they are. I am not talking about the trafficker. I am talking about the person who uses marihuana casually, as some use alcohol. The law classifies them as criminals. Those criminals are your neighbors, your friends, often your children.

According to FBI crime reports, there were 416,000 marihuana arrests in 1975. Sixty-nine percent of all drug arrests in the entire country in that year involved marihuana. And, the vast majority of those were simply consumers.

Fewer than 10 percent were commercial traffickers. While less than 1 percent of the arrests occurred under Federal law, the Federal statute remains a constant reminder to States that the U.S. Congress still classifies marihuana users as criminals.

Support for the removal of criminal penalties is growing rapidly. Eight States have removed criminal penalties. In those States where studies have been conducted after decriminalization, no significant increase in use was found, while it was discovered that the law enjoyed wide support among residents. At the same time, the energies and money of the law enforcement agencies were freed to concentrate on the hard drug problems and the problem of heavy trafficking.

Removal of criminal penalties for personal possession has been endorsed by the President's Marihuana Commission, the American Bar Association, the Consumers Union, the American Public Health Association, and the Governing Board of the American Medical Association, to name a few organizations.

Decriminalization has also been endorsed by such diverse individuals as President and Mrs. Carter, NIDA Director Dr. Robert L. DuPont, William F. Buckley, Jr., James J. Kilpatrick, Ann Landers, and Art Linkletter.

This is clearly not a radical position.

There are currently at least two bills pending before the Subcommittee on Health and Environment which propose to remove Federal criminal penalties for the possession of marihuana. I have introduced H.R. 2997 which calls for the removal of criminal penalties for the possession and not-for-profit transfer of up to 100 grams. The gentleman from New York (Mr. KOCH) has introduced H.R. 432, which removes criminal penalties for the possession and not-for-profit transfer of up to 1 ounce, imposing, instead, a $100 civil penalty. These bills provide reasonable alternatives to the unreasonable law which currently stands on the books.

I am not proposing to encourage the use of marihuana by such legislation, just as I would not encourage the use of alcohol or cigarettes. I strongly support a national policy of discouraging the use of all mind-altering drugs. However, I do believe it is time to acknowledge the fact that marihuana users are not criminals. They no longer should be stigmatized with criminal records that prevent them from getting jobs or licensed in certain professions. They should not be spending time in jail for using a substance which many believe to be less harmful than alcohol or cigarettes.

Mr. Speaker, I would conclude by urging my colleague, Mr. ROGERS, who has done such a superb job of providing leadership for the House on important health legislation, to schedule hearings on the bills to remove Federal criminal penalties for possession of marihuana now pending before this Subcommittee. It is far past the time to bring our law into conformity with reality. I hope that this Congress will finally act on the issue.

Mr. CONYERS. Mr. Speaker, I wish to register my opposition to H.R. 5742, a bill to extend a 3-year appropriations authorization for the Drug Enforcement Administration of the Department of Justice.

The simple fact is that the record of DEA does not support this reauthorization, either for the period of time—3 years—nor the level of funding, a 3-year total of $645 million—$190 million for fiscal year 1978, increasing to $215 million in fiscal year 1979 and increasing to $240 million in fiscal year 1980. This 3-year total represents a 30-percent increase over the past 3 years. The Committee on Interstate and Foreign Commerce, in favorably reporting this bill, itself noted that—

> Despite the impressive statistical successes of the DEA in its drug abuse enforcement and regulatory activities, it does not appear to the committee that there has been a substantial reduction in the supply of heroin and other abusable drugs and substances available in the United States.

This is consistent with the findings of the Senate Committee on Government Operations, whose permanent Subcommittee on Investigations last year issued a report on Federal narcotics enforcement. Testimony before that subcommittee indicated that not only had no improvements in enforcement been made under DEA, but that "there has been a failure to hold the gains which were in hand at the time DEA was created." Similarly, Dr. Thomas E. Bryant, president of the Drug Abuse Council, expressed doubt that spending more and more tax dollars on enforcement will curtail the drug problem to any substantial extent.

The record of DEA has been one of confusion and lack of direction, coordination, planning, and policy. It has a record of internal incompetence and allegations of widespread corruption at the highest levels. It has a long history of fighting with, rather than cooperating with, the agency it should be cooperating with most closely, the U.S. Customs Service. The list of its abuses of civil and constitutional rights is massive. Perhaps this institutional attitude is not surprising, given the atmosphere in which it was launched. When President Nixon created this superagency, it is reported that aide Egil Krogh, who was later to gain fame for other extraordinary administration of justice accomplishments, made the following remarks concerning reported opposition to the agency:

> Anyone who opposes us we'll destroy. As a matter of fact, anyone who doesn't support us we'll destroy.

Mr. Speaker, I believe it is also significant to note that this proposed reauthorization is considerably more generous that the Attorney General himself proposed. The Attorney General proposed only a 2-year appropriations authorization, asking for $182 million for fiscal year 1978—$8 million less than this bill would authorize—and for "such sums as may be necessary for the fiscal year ending September 30, 1979." Furthermore, it is a matter of public record that the Attorney General has under active consideration a recommendation that DEA be merged with the FBI. These are but additional reasons suggesting the lack of wisdom in reauthorization at this level and for this duration.

Mr. Speaker, I strongly urge the rejection of this bill.

Mr. ROGERS. Mr. Speaker, I have no further requests for time.

Mr. CARTER. Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. ROGERS) that the House suspend the rules and pass the bill (H.R. 5742).

The question was taken.

Mr. ROUSSELOT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

AUTHORIZING APPROPRIATIONS FOR THE SECURITIES AND EXCHANGE COMMISSION FOR FISCAL YEAR 1978

Mr. ECKHARDT. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize specified amounts to be appropriated for the Securities and Exchange Commission for fiscal years 1978–80, as amended.

The Clerk read as follows:

H.R. 3722

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 35 of the Securities Exchange Act of 1934 (15 U.S.C. 78kk) is amended—

(1) in the first sentence thereof, by striking out "and not to exceed" and inserting in lieu thereof a comma;

(2) by inserting immediatley before the period at the end of the first sentence thereof the following: ", and $67,000,000 for the fiscal year ending September 30, 1978", and

(3) in the last sentence thereof, by striking out "the 1977 fiscal year" and inserting in lieu thereof "fiscal year 1978".

The SPEAKER pro tempore. Is a second demanded?

Mr. BROYHILL. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. ECKHARDT) and the gentleman from North Carolina (Mr. BROYHILL) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the bill we are considering today which was unanimously reported out of my Subcommittee on Consumer Protection and Finance, and out of the full Interstate and Foreign Commerce Committee, amends the Securities Exchange Act of 1934 to provide for a budget authorization for the Securities and Exchange Commission for fiscal year 1978 of $67 million.

This represents an increase of $10.5 million over the agency's fully appropriated authorization for 1977, and is very much needed for several reasons:

First, the increase will permit the Commission to continue its program to modernize its automatic data processing and records keeping systems. In light of the enormous amount of corporate information that is filed with the Commission, this systems updating is urgently needed to insure the disclosure of such information in a timely manner.

Second, this will permit the Commission to acquire additional office space to relieve the present intolerable overcrowded conditions. The office space problem at the Commission is even worse today than it was 2 years ago when my subcommitee held hearings on the General Services Administration's attempt to relocate the Agency to Buzzards Point.

Third, the authorization would allow an increase in the size of the staff of the Commission to cope with what is perceived to be a crushing workload problem. As a result of the Securities Acts Amendments of 1975, alone, the Commission, without additional staff, has undertaken substantial new responsibilities in the municipal bond and transfer agent areas. As the mandated national market system develops, it will continue to take on additional responsibilities.

Moreover, the enforcement division of the Commission has been so overburdened, that its ability to continue to provide necessary public investor protection may be impaired without additional personnel. As an example, options trading has exploded to the point where the present value of outstanding contracts exceeds $1 trillion. This provides the potential, without close and continuous monitoring, for frauds of enormous dimensions. Yet, the Commission has been able to allocate only one person, part time, to the surveillance of this activity.

Last, the authorization provides for anticipated increased inflationary costs.

It should be noted that the authorization represents a $3 million or 4.6 percent increase over the Commission's original request of $64 million. Although the outgoing Chairman of the Commission acknowledged the space and manpower problems at his Agency, he was unable to satisfactorily explain how his budget, which did not contemplate any increase in staff, nor, of course, additional office space to accommodate them, would solve these problems.

To highlight the problem, in the Division of Enforcement alone, all but the highest ranking professional staff are required to share offices. They have only one secretary for every five professional persons. As a result, attorneys are typing much of their own work and performing other clerical functions. The inefficiencies and counterproductiveness generated by these conditions are self-evident.

It is the intention that this modest increase in authorization will permit the Commission, under its new Chairman, to request appropriations of such sums as are necessary to alleviate the existing overcrowded conditions and to provide for necessary increases in staff. The Securities and Exchange Commission has long been regarded as the most effective and responsive of the independent regulatory agencies. The authorization contained in H.R. 3722 is the bare minimum necessary to assure that this agency will be able continue to maintain that standard.

Mr. BROYHILL. Mr. Speaker, I yield myself 5 minutes.

Mr. Speaker, I rise in support of this bill, H.R. 3722. It is merely a 1-year authorization for the funding of the Securities and Exchange Commission for the fiscal year, 1978. This is only a 1-year authorization. There is a modest increase, I would point out to my colleagues, in this authorization over prior years. I think that the increase is justified, based on the facts that have been outlined by the chairman and in the committee report. We do have a new market operating now in the trading of options. These contracts have a market value of $1 trillion. The market surveillance capacity of the Commission has not kept pace with the tremendous growth of this particular new market. Also, new responsibilities have been added to the Commission in the last Congress under the amendments to the Securities and Exchange Act. The regulatory responsibility was given to the Commission over municipal security dealers.

In addition, responsibility to monitor the planning and implementation of an integrated national market system, where all financial market systems would be interconnected, has been given to the Commission.

When we consider the fact that the Congress has not given any additional funding for additional staff to the Commission in recent years; in other words, the staff has remained fairly static in spite of this increased workload, I think that a case has been made for this very modest increase in the level of funding.

Mr. Speaker, I support the bill as reported from the committee.

Mr. ECKHARDT. Mr. Speaker, I have no further requests for time.

Mr. BROYHILL. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas (Mr. ECKHARDT) that the House suspend the rules and pass the bill, H.R. 3722, as amended.

The question was taken.

Mr. BAUMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. ECKHARDT. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this bill H.R. 3722.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDING THE INDIAN FINANCING ACT OF 1974 BY REVISING THE APPROPRIATIONS AUTHORIZATION FOR THE INDIAN BUSINESS DEVELOPMENT PROGRAM

Mr. RONCALIO. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4992) to amend the Indian Fi-

nancing Act of 1974 by revising the appropriations authorization for the Indian business development program, as amended.

The Clerk read as follows:

H.R. 4992

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 403 of the Indian Financing Act of 1974 (88 Stat. 77, 83), is amended to read as follows:

"SEC. 403. There are authorized to be appropriated not to exceed the sum of $14,000,000 for each of the fiscal years 1978 and 1979 for the purposes of this title.".

The SPEAKER pro tempore. Is a second demanded?

Mr. BAUMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Wyoming (Mr. RONCALIO) and the gentleman from Maryland (Mr. BAUMAN) are recognized for 20 minutes each.

The Chair recognizes the gentleman from Wyoming (Mr. RONCALIO).

Mr. RONCALIO. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 4992 amends the Indian Financing Act of 1974 by extending the authorization of appropriations for the Indian business development program, created by that act, for 2 fiscal years, 1978 and 1979.

The Financing Act was comprehensive legislation designed to address the critical credit needs of Indian tribes and individuals through direct Federal loans, Federal loan guarantees and insurance, and business development grants.

The Indian business development program, created by the act, authorized the Secretary of the Interior to make nonreimbursable "seed money" grants to tribes and individuals to stimulate the development of Indian-owned businesses on or near the reservations. As some of the Members are aware, most Indian reservations are economic deserts with the economic structure owned and controlled by non-Indians surrounding the reservations. It is the function of the business grant program, along with the other provisions of the Financing Act, to give the Indians more control over their economic futures.

Grants under the program may not exceed $50,000: At least 60 percent of the necessary funds for the proposed project must come from other sources: And the applicant must reasonably make available his own financial resources.

As originally established, the grant program was authorized for three fiscal years, 1975, 1976, and 1977, at a level of $10 million. Under this authorization, the administration has requested and the Congress has appropriated $20,464,769 over the three fiscal year period.

In the opinion of the committee, this program, overall, has been successful and deserves continuation. It has resulted in a few green spots in the economic deserts of Indian reservations.

Mr. Speaker, the report of the committee contains a table of statistics relating to this program and I will not go into that. However, I do want to comment on one aspect of the success of the program.

In addition to establishing Indians in business enterprises, the program has resulted in the creation of 6,658 jobs on the reservations. In terms of grant fund dollars, that means that one job was created at a cost of $3,074. I think that that compares very favorably with other Federal employment programs.

Mr. Speaker, I urge the passage of the bill.

Mr. BAUMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Speaker, I rise in support of the legislation, and concur in the remarks made by the distinguished chairman of the subcommittee, the gentleman from Wyoming (Mr. RONCALIO).

Mr. Speaker, I am pleased to rise in support of H.R. 4992. This legislation authorizes appropriations of $14 million for each of fiscal years 1978 and 1979 to continue the Indian business development grant program under the Indian Financing Act of 1974.

The Financing Act was one of several key legislative initiatives designed to implement the policy of Indian self-determination first enunciated in 1971. To achieve meaningful self-determination it was and still is necessary to provide a basis for achievement of long-sought Indian economic self-sufficiency. Central to this problem is the generally inadequate availability of financial resources to enable Indian people to develop their own resources and potential.

During consideration of the Financing Act, the Bureau of Indian Affairs estimated that the credit needs in Indian country were in excess of $1 billion. To meet this need, the act initiated a three-pronged attack on the problem. First, it consolidated and increased by $50 million the revolving loan programs in the Bureau of Indian Affairs to provide direct Federal loans to tribes and individuals at a relatively low rate of interest. Second, it established a loan guaranty and insurance program under which the United States either guarantees loans made by a tribe or individual from a private lender or insures loans a private lender makes to Indian tribes or individuals. Third, it created the 3-year Indian business development grant program which H.R. 4992 would extend for 2 years.

The Indian business development program provided for "seed money" grants to be made to Indian tribes and individuals to establish or expand profit-making Indian-owned businesses and to enhance reservation economies. Grants could be up to $50,000 but for not more than 40 percent of an enterprise. Between 1974 and 1977, Congress appropriated $24 million of the $30 million authorized by the Financing Act. The Bureau of Indian Affairs made 1,395 grants totaling $20,755,000 to Indians and Indian tribes in 24 States. These grants generated $97 million in additional capital and created or sustained 6,658 jobs with an annual payroll estimated at $30.3 million. The average grant per job created or sustained was $3,070.

The grants have been utilized in a wide variety of business enterprises. Individual Indian entrepreneurs received the largest share of the grants, 1,137. Partnerships received 109; Indian tribes, 67; Indian corporations, 79; Indian cooperatives and associations, 15. Significantly, business failures involving these grants have occurred at a rate of only 8 percent, well below SBA's rate and below the annual rate of private business failures nationally, which is about 25 percent.

Witnesses at hearings on H.R. 4992 before the Subcommittee on Indian Affairs and Public Lands testified that the grant program, together with the revolving loan and loan guaranty and insurance programs, have made sizeable inroads into the economic development capital needs in Indian country. However, much more remains to be done, as Indian reservations generally remain areas of chronically high unemployment and do not have significant on-reservation economic communities. The demand for capital remains high. The BIA estimates their current needs under the grant program, based on applications received, is approximately $14 million per fiscal year.

In an era of multibillion dollar proposals for make-work jobs, it is refreshing to know that a program administered by the much-maligned Bureau of Indian Affairs is making progress in creating meaningful jobs and encouraging private economic initiatives in areas of chronically high unemployment. It is providing the taxpayer with a decent return for his tax dollar. The administration, the Interior and Insular Affairs Committee and the Indian community all agree that the Indian Business Development Grant program is cost-effective and worthy of continuation. For these reasons I strongly urge the House to support enactment of H.R. 4992.

Mr. BAUMAN. Mr. Speaker, I have no further requests for time.

Mr. RONCALIO. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wyoming (Mr. RONCALIO) that the House suspend the rules and pass the bill H.R. 4992, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. RONCALIO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

EXTENDING CERTAIN AUTHORITIES OF THE SECRETARY OF THE INTERIOR WITH RESPECT TO WATER RESOURCES RESEARCH AND SALINE WATER CONVERSION PROGRAMS

Mr. MEEDS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4746) to extend certain authorities of the Secretary of the Interior with respect to water resources research and saline water conversion programs, and for other purposes, as amended.

The Clerk read as follows:

H.R. 4746

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Water Resources Research Act of 1964 (Public Law 88-379; 78 Stat. 330) as amended, and the Saline Water Conversion Act of 1971 (Public Law 92-60; 85 Stat. 162) as amended, are further amended as follows:

(1) Title II, additional water resources research programs, section 200(a) of the Water Resources Research Act, is hereby further amended by adding after "for each of the fiscal years 1972-1976", the words "and for 1978,"

(2)(a) Section 10(b) of the Saline Water Conversion Act is amended by changing the phrase "during the fiscal years 1973 to 1977, inclusive," to read "during the fiscal years 1973 to 1978, inclusive,".

(b) There is authorized to be appropriated to carry out the provisions of the Saline Water Conversion Act of 1971 during fiscal year 1978 the sum of $11,950,000, to remain available until expended as follows:

(1) Research Expense, $1,500,000;

(2) Development Expense, $7,950,000;

(3) Test Facility Operation and Maintenance, $1,500,000;

(4) Administration and Coordination, $1,000,000.

(c) Expenditures and obligations under any activity authorized by paragraphs (1), (2), and (3) above may be increased by not more than 10 per centum if any such increase is accompanied by a corresponding decrease in expenditures and obligations in one or more activities set forth in subsection (b) above.

(d) Notwithstanding any provision of the Saline Water Conversion Act of 1971 (85 Stat. 162) or any other provision of this Act, no authority to make payments under this Act shall be effective except to such extent or in such amounts as are provided in advance in appropriations Acts.

All other provisions of the above Acts shall remain unchanged by this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. LUJAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Washington (Mr. MEEDS) will be recognized for 20 minutes, and the gentleman from New Mexico (Mr. LUJAN) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Washington (Mr. MEEDS).

Mr. MEEDS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the bill H.R. 4746 is the annual authorization for appropriations to carry out research and development in saline water conversion technology by the Office of Water Resources Research in the Department of the Interior.

The bill also reinstates the authorization for appropriations with which to finance grants and contracts for research on other water resources problems bearing on the mission of the Department of the Interior. This program is also administered by the Office of Water Resources Research.

The saline water conversion research program, which is quite familiar to most Members of this body, is carried out pursuant to the Saline Water Conversion Act of 1971, which by its terms requires annual authorization of appropriations. H.R. 4746 accomplishes this authorization at the level of $11,950,000 for fiscal year 1978. The President has requested $5,025,000. The committee appreciates that this is a $6,925,000 increase. This increase is amply supported by the needs of the program as developed in the hearing record where qualified witnesses presented impressive justification of increased Federal input to this activity.

In fact, Mr. Speaker, this Member would be quite comfortable with a program level of twice that we are recommending today except that the previous administration has over the past 6 years nearly liquidated the technical staff and brought into question its capability effectively to utilize any more funds than is now proposed to be authorized.

The emphasis in the bill as introduced was limited primarily to the reverse osmosis process for seawater conversion. The committee amendment provides a more diverse program and reinstates funding for the freezing process, the electrodialysis process, and specifically mandates the continued operation of the Government owned test facilities at Wrightsville Beach, N.C., and Roswell, N.M. The overwhelming evidence available to us indicates the desirability of testing desalting systems and components under the uniform conditions that can be afforded at the test facilities. It is most important that testing be uniformly conducted and impartially monitored so that valid conclusions can be drawn with respect to comparative test results.

The attention of the House is also invited to the fact that the bill as presented today provides specifically for the initiation of a program, expected to require 3 years, through which we expect to demonstrate the applicability of membrane desalting processes to the reuse of sanitary sewage effluents for the purpose of recycling the water for reuse. The program visualized by the committee would be carried out in cooperation with a non-Federal groundwater management agency in California having responsibility for preserving the quality and productivity of its groundwater resources. The end product of the proposed demonstration program would be reinjected into the groundwater to provide a fresh water barrier to salt water intrusion from the ocean and ultimately for withdrawal for municipal and industrial consumption. We believe this program will, in addition to providing major technical information, serve as a graphic demonstration of the versatility of desalting processes in solving water resources problems and otherwise justify the confidence that Congress has long reposed in desalting research.

A secondary purpose of H.R. 4746 is the reinstatement of appropriations authority for research activities pursuant to section 200(a) of the Water Resources Research Act of 1964. This program is not operative in fiscal year 1977, the authority having expired at the end of fiscal year 1976. The committee has not heretofore been willing to renew this program because of concern with the lack of evenhanded distribution of the grant funds among the several classes of eligible grantees. There is now some assurance that this program, if reinstated, will not be biased toward one class of eligible grantee and that it continues to merit a limited degree of public support. The bill therefore authorizes, in a technical sense, an appropriation of $10,000,000 for fiscal year 1978. It should be kept in mind, however, that only $2,600,000 has been requested in the budget and that this lesser amount is really all that is in question in this legislation.

In summary, Mr. Speaker, I believe that this is about the best and most realistic bill that we can expect for fiscal year 1978, and it warrants the support of the House. In requesting this support, I want to assure my colleagues that we have definite plans to conduct a far-reaching overview of both these programs to develop, if at all possible, a new and better charter for guiding the Interior Department's water resources research activities. We hope to bring to you, later this year or very early next year, updated organic legislation to provide more relevant and better managed research programs and to have it firmly enacted into law before addressing the fiscal needs of 1979.

With this commitment, I urge every Member to support this bill and thereby identify with us in our effort to upgrade our technological capabilities to solve the water resources problems of the years ahead.

Mr. Speaker, I reserve the balance of my time.

Mr. LUJAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I concur with the remarks of the gentleman from Washington, the very able chairman of our Water and Power Subcommittee, and will add that I consider the saline water program to be one of the most important programs we have in this country to provide new sources of water for future generations.

While we are only extending the appropriations authorizations for 1 year in this bill, I would make it clear that this does not in any way indicate that we intend for the program to die next year. We limited the authority to 1 year at the request of the administration to provide flexibility for the President and the Secretary in their reorganization plans.

The conversion of brackish and saline water to fresh water is one of the major hopes we have in our efforts to make maximum use of every drop of water in this country—particularly in the arid

Western States now suffering from a disastrous drought.

We have increased the administration's requested funding authority by $6.4 million, for a total of $11.9 million. And we have told them where we want the money to go, in terms of the various technologies under development. One of those technologies—the conversion of brackish water by reverse osmosis membranes—is of particular importance to New Mexico, not only because the research facility is located at Roswell, N. Mex., but because our State vitally needs the technology being developed there. We are one of the most arid States in the West, yet we sit on a veritable ocean of brackish water.

If we had the means to convert that brackish water to potable or irrigable water, we would not need to import water from the Colorado River. And our distant neighbors to the northwest, Washington and Oregon, would be relieved of their moral obligation to share with us the surplus waters of the Columbia River.

Brackish water conversion, coupled with the development of geothermal energy, holds promise of providing western States with fresh water and a new source of energy in areas that are now in short supply of both.

The economical conversion of seawater would eliminate the need for huge aqueducts to carry water from our inland river systems to the coastal communities where so many people want to live. Billions of dollars will be saved. And, more importantly, the fragile ecosystems of our river valleys would remain undisturbed by man-made dams, lakes and delivery ditches.

The saline and brackish water conversion program can give us the tools we need to clean up the Great Lakes and keep them clean. We already have under construction a large desalting plant at Yuma, Ariz., that will clean the salts and minerals from the Colorado River before it flows to Mexico, thus honoring our treaty with that nation.

Mr. Speaker, I earnestly hope this administration will catch the same vision of this program that has been apparent to the Congress for many years. And I ask my colleagues to give a strong signal in that direction by passing this bill unanimously.

Mr. MEEDS. Mr. Speaker, I have no further requests for time.

Mr. LUJAN. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Speaker, the saline water conversion program is one of the most important and far-reaching programs in Government today. It is also one of the most successful in terms of accomplishing its original mission. The President wanted to hold the program to the skeleton funding level of $5 million. Our committee increased that amount to $11.9 million because of the overwhelming evidence of need demonstrated and dramatized by the current drought situation in our Western States.

The testimony we received from the Interior Department shows that the staff of highly specialized technicians that had previously been assembled has now been cut to less than a tenth of its 1973 strength. They have neither the manpower nor current planning capability to use more money than is authorized in this bill.

That is why we have limited the authorization to 1 year. We expect the administration to use this money this year to strengthen its Office of Water Research and Technology—with emphasis on the "technology"—so that it will be ready next year to shift into high gear.

When the saline water conversion authorization bill came to the floor 4 years ago, I made the following prediction:

> The water crisis that faces this nation will become more acute than the energy crisis. We must move ahead now, with every resource at our disposal, to develop new sources of water while at the same time developing better methods of managing and conserving the water we now have. Every western state is treading a narrow line today, trying to keep its water supplies in balance with its water demands. The slightest change in climatic conditions—the slightest drop in our water supplies through drought or reduced precipitation—will have disastrous results unless we move now to augment those supplies.

Mr. Speaker, that change in climatic conditions has come about. That drought is upon us. We did not move ahead 4 years ago, and we were therefore unprepared to meet the crisis that changing weather conditions has thrust upon us. California alone will lose billions of dollars in crops this year. The Nation will be faced with reduced food supplies this summer. In State after State throughout the West, farmers cannot plant their parched lands. City after city is being forced to ration household water. And in our committee hearings in Seattle earlier this year, we heard testimony from farmers who said they were ready to defend their dwindling water supplies with guns if necessary.

Yet, during the years when these conditions were developing, the saline water conversion program was allowed by the administration to die on the vine. Despite annual proddings by the Congress, the development of new technology ground to a halt.

And even today, months after the drought has brought devastation to half of the Nation's farmlands, the administration not only seeks to cancel water projects already underway but asks us to stand by while it completes the burial of the saline water conversion program.

I urge my colleagues not to permit this to happen. I ask them to join me in demanding action and results from the people downtown who have the responsibility for developing new supplies of water while better managing the dwindling supplies we now have.

This bill should pass by unanimous vote and I assure you that our committee will exercise strong oversight measures to make certain that we get water-producing hardware as soon as is humanly possible.

Mr. LUJAN. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. LAGOMARSINO).

Mr. LAGOMARSINO. Mr. Speaker, I rise in support of H.R. 4746, a bill to extend certain authorities of the Secretary of the Interior for programs in water resources research and saline water conversion for fiscal year 1978.

As you know, this is basically an interim measure that seeks only to allow work to continue on existing programs and to restore funding that had lapsed for fiscal year 1977 for some programs under title II of the Water Resources Research Act. In other words, H.R. 4746 would allow research programs now in effect to continue for an additional year without the risk of further disruption, or pressure on us to rush through more extensive legislation on an emergency basis. There are several bills now being considered by this body to reorganize water reclamation and saline water conversion programs and to provide for a sustained commitment in these research areas. More time is needed, however, to insure enactment of a responsible bill. It is imperative that these programs be continued in the interim without further disruption. H.R. 4746 would fill this gap and is a major step to revive serious efforts to insure adequate water resources for future needs.

Mr. Speaker, the current drought in California and the West emphasizes the need to get on with the business of finding practical and economical ways to desalinize sea water and reclaim brackish and wastewater for domestic and industrial uses.

The saline water conversion research and development program includes research and development on sea and brackish water membranes, technology transfer, and water reuse. Considerable progress has been made in these research areas and it is our hope that a renewed effort will yield major dividends in water reclamation and desalinization technologies.

In addition, the bill earmarks funds for research and development on freezing technology, a promising new method which can be combined with liquified natural gas plants, and helium plants utilizing "waste cold" from the gas vaporization process.

The administration supports this bill and I urge its immediate adoption.

Mr. BROWN of California. Mr. Speaker, I thank the gentleman from Washington (Mr. MEEDS) for providing the opportunity to support this legislation, which includes environmental research leading to methods of reducing the impacts of discharge of brines into lakes, streams, and other waters.

As members of the Subcommittee on the Environment and the Atmosphere heard last fall in hearings on water quality research, the environmental concerns which emerge is converting saline and other chemically contaminated water into water suitable for beneficial consumptive uses are not dissimilar from some of the problems which have been encountered in the EPA Office of Research and Development water quality and water reuse research programs. EPA's efforts to scrutinize innovative technologies in water reuse received a large infusion of support in H.R. 5101, EPA ORD's fiscal year 1978 authorization, which has passed the House.

I note from the committee report that the Office of Water Research and Technology is to be strengthened in its capa-

bilities by this legislation. I would simply like to urge, as the Science and Technology Committee has stated in the EPA Research, Development, and Demonstration Authorization Act (section 6.(b)), that the OWRT Director coordinate with the heads of other agency programs in order to enhance the overall Federal research efforts and to minimize the unnecessary duplication of programs, projects, and research facilities.

Finally, I wish to note that the Subcommittee on the Environment and Atmosphere, which I chair, is planning to have oversight hearings on water recycling and water reuse environmental research issues this fall.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Washington (Mr. MEEDS) that the House suspend the rules and pass the bill H.R. 4746, as amended.

The question was taken.

Mr. HARKIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 33(b) of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. MEEDS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 4746.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

AMENDING THE WATER RESOURCES PLANNING ACT (79 STAT. 244), AS AMENDED

Mr. MEEDS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6752) to amend the Water Resources Planning Act (79 Stat. 244) as amended, as amended.

The Clerk read as follows:

H.R. 6752

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Water Resources Planning Act of 1965 (79 Stat. 244 as amended) is hereby further amended by deleting section 401(c) the words: "not to exceed a total of $10,000,000 for fiscal years 1976 and 1977" and inserting in lieu thereof "not to exceed the sum of $3,905,000 for fiscal year 1978".

(b) Section 401(a) of the Water Resources Planning Act (75 Stat. 244) is amended by deleting from the first sentence the word "annually" and inserting in lieu thereof the following "for fiscal year 1978".

(c) Section 401(b) of the Water Resources Planning Act (75 Stat. 244) as amended, is further amended by deleting the word "annually" and inserting in lieu thereof the following "for fiscal year 1978".

The SPEAKER pro tempore. Is a second demanded?

Mr. LUJAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Washington (Mr. MEEDS) and the gentleman from New Mexico (Mr. LUJAN) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from Washington (Mr. MEEDS).

Mr. MEEDS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the bill H.R. 6752, as amended by the Committee on Interior and Insular Affairs. This measure will authorize appropriations for the fiscal year 1978 for the U.S. Water Resources Council to carry out its responsibilities under section 401(c) of the Water Resources Planning Act.

As recommended by the administration, the measure would have authorized continuing appropriations in an indefinite amount. The committee saw fit, and I believe rightly so, to limit the authorization to $3,905,000—the amount requested in the President's budget.

In addition to authorizing the amount requested to be appropriated, the bill was further amended in committee to convert two other continuing authorizations to the single fiscal year 1978. Thus, all funding authority for activities authorized to be conducted by the Water Resources Planning Act will expire at the end of fiscal year 1978 unless there is further legislation enacted by the Congress.

I believe it is important to point out at this time for the information of our colleagues and for legislative history that the Water Resources Planning Act provides four separate authorizations for appropriations with which to carry out the purposes of the act. One of these authorizations; that is, planning grants to States for assisting in developing State level planning capability, expires at the end of fiscal year 1977. The administration in recent years has not supported extension of this authority.

The other authorizations are to carry out administration of the council and to finance comprehensive river basin planning either through River Basin Commissions or through ad hoc interagency committees. While the objectives of these programs, as intended by Congress in establishing the Water Resources Council, are to stabilize, standardize, and enhance the management and development of our Nations' water resources, the record of the council in this regard is quite undistinguished.

It is simply for this reason that the committee recommends that all authorizations be terminated at the close of fiscal year 1978, or until the program can be carefully scrutinized through oversight hearings to see if its institutions warrant continuation.

Such hearings will be among the highest priorities of the Subcommittee on Water and Power Resources during the remaining days of this session of Congress. We simply must come to grips with this issue. The water resources management and development problems facing this country are simply too crucial to tolerate the present chaotic situation that exists organizationally within the policymaking structure of our Government. Out of the hearings we propose to conduct will hopefully come legislation that will result in there being given meaningful guidance to the water resources development community. It may come through a structure that resembles the present Water Resources Council or it may come through something else—that remains to be seen. Our greatest hope is that we can write a Planning Act that will work better than has been the case with the law on the books for the past 12 years.

Mr. Speaker, I recommend that all Members support H.R. 6752 and thereafter that they support our committee in its efforts to bring into being workable and effective water resources planning mechanisms.

Mr. WEAVER. Mr. Speaker, will the gentleman yield?

Mr. MEEDS. I will be most happy to yield to the gentleman from Oregon, but first let me commend the gentleman for his help in this legislation and for his constructive criticism of the legislation.

Mr. WEAVER. Mr. Speaker, I thank the gentleman and commend him for his work as chairman of the subcommittee and in bringing this legislation to the floor.

I offered the amendment in the subcommittee to terminate authorization for this council at the conclusion of fiscal year 1978, because I believe we must explore deeply the justification for further expenditures on this council and define exactly what the direction of its work should be before the council should be allowed to continue past that date.

Mr. MEEDS. Mr. Speaker, I thank the gentleman from Oregon (Mr. WEAVER). I am sure the gentleman agrees with me that water resources planning is among the most important and imperative functions we must undertake, but that we must do so in a fashion which guarantees that we are going to get some results from those expenditures.

Mr. LUJAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, in supporting this bill, I want to notify the members and staff of the Water Resources Council that our committee is not at all satisfied with the results we have seen in recent years from its work.

This council has been in existence for more than 10 years, yet the work of establishing river basin commissions is not yet completed. Nor have we seen any significant results of its river basin planning. It seems to me that after 10 years of work, the council should have had in hand some definite plans for the coordinated operation of river basins that would help the Western States meet the current drought crisis. But after all these millions have been spent for planning, I have yet to see any tangible results in saving, conserving, or producing a single drop of water.

As amended by our committee, the bill limits the council's funding authorization to 1 year and reduces its authorization for preparation of assessments and river basin plans from $5 to $3.9 million for this year.

We want to keep the council in business long enough for it to complete its work, but we want them to move briskly toward that completion and to show us some tangible results.

With those comments, Mr. Speaker, I support the bill and urge my colleagues to vote favorably on it.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. LUJAN. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I concur with the remarks of the very able gentleman from New Mexico and will add only that the Water Resources Council has missed a golden opportunity to perform a much greater service than its work to date would indicate.

Throughout our hearings on the Western drought earlier this year, our committee saw firsthand the need for more comprehensive planning and coordination of our river systems. It is for that purpose that the council was established in 1965. While I recognize the difficulties it has had in obtaining agreement among the States for such coordinated planning, I believe it should be much farther along with its job than it is.

I support this bill, and I commend both the gentleman from Washington, the chairman of our Water and Power Subcommittee, and the gentleman from New Mexico, our very able ranking member on that subcommittee, for the strong emphasis they have placed on prodding the council for faster and better results. As we exercise our oversight responsibilities on this program during the coming year, we will take a very close look at how the money is being spent and at the results we are getting.

I see no objection to the bill as amended and I support its enactment.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Washington (Mr. MEEDS) that the House suspend the rules and pass the bill H.R. 6752, as amended.

The question was taken.

Mr. HARKIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. HARKIN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

The point of order is considered withdrawn.

RIVER BASIN AUTHORIZATIONS

Mr. ROBERTS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5885) authorizing additional appropriations for prosecution of projects in certain comprehensive river basin plans for flood control, navigation, and for other purposes, as amended.

The Clerk read as follows:

H.R. 5885

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) in addition to previous authorizations, there is hereby authorized to be appropriated for the prosecution of the comprehensive plan of development of each river basin under the jurisdiction of the Secretary of the Army referred to in the first column below, which was basically authorized by the Act referred to by date of enactment in the second column below, an amount not to exceed that shown opposite such river basin in the third column below:

Basin	Act of Congress	Amount
Alabama-Coosa River Basin	Mar. 2, 1945	$13,000,000
Arkansas River Basin	June 28, 1938	20,000,000
Arkansas-Red River Basin	Nov. 7, 1966	8,000,000
Brazos River Basin	Sept. 3, 1954	60,000,000
Central and Southern Florida	June 30, 1948	9,000,000
Columbia River Basin	June 28, 1938	77,000,000
Mississippi River and tributaries	May 15, 1928	459,000,000
Missouri River Basin	June 28, 1938	170,000,000
North Branch, Susquehanna River Basin	July 3, 1958	75,000,000
Ohio River Basin	June 22, 1936	60,000,000
Quachita River Basin	May 17, 1950	2,000,000
Red River Waterway project	Aug. 13, 1968	101,000,000
San Joaquin River Basin	Dec. 22, 1944	125,000,000
Santa Ana River Basin	June 22, 1936	3,000,000
South Platte River Basin	May 17, 1950	30,000,000
Tampa Harbor	Dec. 31, 1970	23,000,000
Upper Mississippi River Basin	June 28, 1938	2,000,000
White River Basin	-----do-----	2,000,000

(b) Of the amount authorized for the Columbia River Basin, $1,000,000 shall be available for the local flood protection projects authorized by section 204 of the Flood Control Act of 1950, and the authorization for such local flood protection projects is hereby increased to $16,000,000.

(c) The total amount authorized to be appropriated by this section shall not exceed $1,239,000,000.

SEC. 2. The project for flood protection on the Sacramento River, California, authorized by the Flood Control Act approved March 1, 1917, as amended, is hereby further modified to authorize the Secretary of the Army, acting through the Chief of Engineers, to construct bank protection works along the reach of the Sacramento River and its tributaries from Red Bluff to Shasta Dam, subject to the same requirements of non-Federal cooperation applicable to other similar elements of the project, and to include mitigation of fish and wildlife losses induced by the project. The evaluation and justification of the project shall be based on the overall benefits and costs of all project elements. In addition to previous appropriations there is hereby authorized to be appropriated the sum of $25,000,000 to carry out the purposes of this section.

SEC. 3. (a) The project for the Caesar Creek, Ohio River Basin, Ohio, authorized by section 4 of the Act entitled "An Act authorizing the construction of certain public works on rivers and harbors for flood control, and for other purposes", approved June 28, 1938 (52 Stat. 1215, 1217), is hereby modified to authorize and direct the Secretary of the Army, acting through the Chief of Engineers, to construct a public water supply system in accordance with the document entitled "Southwest Ohio Water Plan", prepared by the Ohio Department of Natural Resources (April 1976), with modifications as the Secretary deems advisable.

(b) The Federal share of the cost of construction of the water supply system pursuant to subsection (a) of this section shall be 100 per centum.

(c) Prior to the construction of the water supply system pursuant to subsection (a) of this section, the Secretary of the Army, acting through the Chief of Engineers, shall enter into an agreement with appropriate non-Federal interests which provides that (1) such non-Federal interests will provide the Secretary with the lands, easements, and rights-of-way necessary for the Secretary to construct such water supply system, and (2) after such construction is completed, all right, title, and interest of the United States in such water supply system shall be conveyed to such non-Federal interests who shall thereafter operate and maintain such water supply system.

(d) There is authorized to be appropriated not to exceed $19,000,000 to carry out this section.

SEC. 4. Authorizations for appropriations contained in this Act are for those fiscal years which begin on or after October 1, 1977.

The SPEAKER pro tempore. Is a second demanded?

Mr. DON H. CLAUSEN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. ROBERTS) will be recognized for 20 minutes, and the gentleman from California (Mr. DON H. CLAUSEN) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I bring to the floor, H.R. 5885, a bill authorizing additional appropriations for Corps of Engineers water resources projects in eighteen river basins throughout the country. I wish to commend the distinguished chairman of the committee, the gentleman from California (Mr. JOHNSON) for the usual fine leadership he has shown during the course of our consideration of this legislation. I want to also thank the ranking minority member of the committee, the gentleman from Ohio (Mr. HARSHA), the ranking minority member of the Subcommittee on Water Resources, the gentleman from California (Mr. DON H. CLAUSEN) and all of the members of the subcommittee and full commmittee for the cooperation and assistance they gave us in connection with this legislation.

H.R. 5885, as reported, the River Basin Monetary Authorization Act of 1977, provides additional authorizations for appropriations for water resources projects of the Corps of Engineers. The additional authorizations are designed to cover potential appropriations for fiscal years 1978 and 1979. In each of the basins sufficient authorizations have been included to cover the contingencies of full capability funding and unexpectedly good progress on construction schedules. This was done to avoid the possibility of a recurrence of problems such as those which occurred in the San Joaquin River Basin in California and the Brazos River Basin in Texas where projects will exhaust their monetary limitation prior to the end of fiscal year 1977 even though they were funded to full capability, because of unanticipated good weather which enabled construction to proceed at a faster pace than believed possible.

By providing the contingency allowance for each basin, flexibility is provided for the appropriations process so that any basin or basins can be funded at a level which will avoid such problems subject, of course, to the overall budgetary limitations imposed by the congressional budget process.

Monetary authorizations were first put into effect by the Flood Control Acts of 1936 and 1938. They limit authority to appropriate and expend funds within specified basins or specified major projects to levels below the total costs of the authorized project or basin development. In this way they give the Congress the opportunity to review and control the rate of accomplishment of the basin plans and major projects to which they apply.

In these plans, the Congress has approved an entire plan for development of a river basin in the interests of flood control, navigation, power, and allied water uses, but limited the amount of funds to anticipated appropriations for a specified period of years, allowing accomplishment of only part of the plan. Subsequently the Congress has augmented some of the previously approved plans by authorizing additional projects, or modifications of projects, and increased the monetary authorizations to provide for additional appropriations. When the monetary authorization limit of a plan is approached legislation is required to provide additional authorization so that appropriations can be made to permit the plan to continue. If such legislation is not forthcoming when needed, construction of projects in the basin plan cannot proceed even if funds have been included in appropriations acts for this purpose.

Mr. Speaker, I wish to emphasize that H.R. 5885 is intended only to authorize appropriations for 1978 and 1979. The money already appropriated for fiscal year 1977 is sufficient with the use of reprograming to adequately cover all of the projects in all of these basins through fiscal year 1977. In order to make this abundantly clear, however, there is a technical amendment which specifically provides that authorizations for appropriations contained in H.R. 5885 are only for fiscal years starting with fiscal year 1978 in order to comply with the requirements of the congressional Budget Act.

Mr. Speaker, I now yield such time as he may consume to the gentleman from California (Mr. JOHNSON), the Chairman of the full committee.

Mr. JOHNSON of California. Mr. Speaker, I wish to commend the chairman of the Subcommittee on Water Resources, the gentleman from Texas (Mr. ROBERTS), for the excellent job he has done in bringing this bill to the floor. I also wish to express my appreciation for the usual fine support and assistance of the ranking minority member of the committee, the gentleman from Ohio (Mr. HARSHA) and the ranking minority member of the subcommittee, the gentleman from California (Mr. DON H. CLAUSEN), as well as all of the members of the subcommittee and full committee.

H.R. 5885, which authorizes additional appropriations for continuation of projects in 18 river basins throughout the country, is needed to allow projects which are presently underway to continue. The authority for additional appropriations is designed to cover potential needs through fiscal year 1979. These river basin authorizations have been utilized since the 1930's on basinwide plans and large projects throughout the country as a means of monitoring the progress of work on the plans and individual projects. Less is authorized to be appropriated than is needed, and the appropriations ceilings are periodically raised to allow the projects to continue for a 1- or 2-year period. The last basin authorization bill was in 1976 and additional authorization is needed for fiscal years 1978 and 1979.

I would particularly like to point out one provision of this bill. Section 2 modifies the project for flood protection and other purposes on the Sacramento River, California, to authorize the Secretary of the Army, acting through the Chief of Engineers, to construct bank protection works along the reach of the Sacramento River and its tributaries from Red Bluff to Shasta Dam, subject to the same requirements of non-Federal cooperation applicable to other similar elements of the project. Mitigation of fish and wildlife losses induced by bank stabilization work is also authorized. Section 2 also provides that the evaluation and justification of the project shall be based on the overall costs and benefits of all project elements and authorizes not to exceed $25 million over and above prior appropriations to carry out the project.

The project for flood protection on the Sacramento River and tributaries was originally authorized by the Flood Control Act of 1917. Since then it has been modified and supplemented by a number of subsequent acts. The bank protection feature of the projects consists of a long-range program for construction of bank erosion control works and setback levees. Its purposes are to maintain the integrity of the levee system of the flood control project, and prevent serious erosion problems and associated deposition of sediment in downstream channels. The releases from Shasta Dam, a Federal project, are causing erosion problems in the reach between the dam and Red Bluff. Accordingly, this section of the river, immediately upstream of the existing bank protection work, has been added to the overall project.

Mr. Speaker, I urge passage of the bill.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 5885 authorizing additional appropriations for the prosecution of water resources development in 18 river basins. My distinguished colleague, the gentleman from Texas, should be commended for his excellent job in bringing this legislation to the floor. He has aptly explained the purpose of this legislation and its needs. I would like to add my support and point out that only through this legislation to increase the authorization levels can these needed projects continue to be developed.

Mr. Speaker, I regard construction of well justified and environmentally responsive water resource development projects to be one of the most productive investments of public funds available to our Nation. These projects improve navigation, prevent flood damages, produce hydroelectric power, provide water supply, improve water quality, and offer water-based recreational opportunities for the American public. They are authorized and constructed to alleviate water related problems, and hopefully, to prevent a recurrence of some of the more severe manifestations of these problems which have occurred in past years.

I do have a concern, however, that nonstructural solutions to flood control problems have not been adequately explored and utilized. It is my understanding that a locality that chooses a plan which would employ nonstructural measures does not receive the same level of Federal cost sharing for the project as they would if a structural measure had been selected. It is my belief that if a Federal interest is identified for a structural measure, then there should also be Federal participation in a nonstructural measure with the same cost sharing. It is my intention to pursue this matter through the Investigations and Review Subcommittee of the Committee on Public Works and Transportation. But I feel the Members should be aware that a problem exists with the implementation of this program which the Members of this body authorized when they passed section 73 of the Water Resources Development Act of 1974, the provision which first allowed a Federal participation in nonstructural measures.

The legislation currently under consideration seeks to continue the implementation of the longstanding Federal commitment to water resource development. This legislation affects the safety and prosperity of millions of Americans and thus necessitates favorable action by the Congress. It should be noted that this bill does not provide new budget authority or increased tax expenditures. It merely authorizes funding levels for appropriations in these river basins.

Mr. Speaker, I urge passage of H.R 5885.

Mr. Speaker, I now yield such time as he may consume to the gentleman from Ohio (Mr. HARSHA).

Mr. HARSHA. Mr. Speaker, I rise to add my praise to that voiced by the distinguished chairman of the House Public Works and Transportation Committee for the work accomplished by Mr. ROBERTS and his Subcommitee on Water Resources in preparing this legislation. The need for this legislation has already been aptly explained by my distinguished colleagues and I would like to reiterate that although continuing funding is provided by public works appropriations, it is contingent on additional authorizations. Therefore, it is imperative that the Congress act on H.R. 5885 in a timely fashion so that these invaluable water resource development projects will continue uninterrupted. It is not in the national interest to delay the realization of the benefits of flood control, navigation, water supply, hydropower, and recreation that will accrue from these projects.

Mr. Speaker, section 3 provides for the construction of a water supply facility for an area in my district which has little or no capability to provide the citizenry of that area with a reliable source of potable water. This section is the same as H.R. 6968 which I introduced on May 5 of this year.

In 1979 the corps expects to complete construction of the Caesar Creek Reservoir, and the State of Ohio has contracted with the Corps of Engineers for water supply storage which will provide 35 million gallons per day. However, there is no treatment nor transmission system currently available to utilize this water. To construct this system will require an expenditure of approximately $37.5 million before the 18 communities, and the 185,000 people that will ultimately be served, can begin to use this water.

Thus, H.R. 5885 would authorize the Corps of Engineers to provide the water treatment plant at a cost of approximately $19 million. The cost of the total system is more than the individual communities and rural areas can bear. This system will be a regional system with regional benefits. Because the benefits are diffuse, I believe there is a Federal interest in providing some help and financial assistance. The local interests will still be required to put up nearly $18.5 million, roughly one-half the cost of the total system.

Mr. Speaker, currently these communities ride the roller coaster when trying to determine whether or not they will have water. For the first time an assurance that a continual supply of water will be available to those local communities will be provided by H.R. 5885. I believe there is a definite Federal interest in providing this facility. I urge passage of this vitally needed legislation.

Therefore, it is imperative that the Congress act on H.R. 5885 in a timely fashion so that these valuable water resource projects will continue uninterrupted. It is not in the national interest to delay the benefits of flood control, navigation water supply, and recreation, that will accrue from these projects.

Mr. ROBERTS. Mr. Speaker, I have no further requests for time.

Mr. DON H. CLAUSEN. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. ROBERTS) that the House suspend the rules and pass the bill H.R. 5885, as amended.

The question was taken.

Mr. HARKIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. HARKIN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

The point of order is considered withdrawn.

MEDICINE BOW NATIONAL FOREST SURVEY

Mr. RONCALIO. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2501) to provide for the amendment of the public survey records to eliminate a conflict between the official cadastral survey and a private survey of the so-called Wold Tract within the Medicine Bow National Forest, Wyo., as amended.

The Clerk read as follows:

H.R. 2501

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of the Interior is directed to perform a survey of the boundary between the privately owned lands and the surrounding national forest lands situated in sections 4 and 5, township 12 north, range 78 west, Sixth principal meridian, Wyoming.

(b) The survey shall follow the private survey as monumented or otherwise identified on the ground, known as the W. E. Zipfull (or Zipfel) survey performed in 1954, which purports to identify the exterior boundaries of the following described patented land: southwest quarter of the northwest quarter, north half of the southwest quarter, section 4; southeast quarter of the northeast quarter, section 5, township 12 north; range 78 west; Sixth principal meridian, Wyoming.

(c) Upon completion of the survey, the Secretary shall assign a tract number to the land enclosed by such survey and thereafter the exterior boundaries of the tract shall be considered as being the exterior boundaries of the patented lands described in subsection (b).

(d) The Congress recognizes that the facts in this case involve numerous landowners and are highly unusual and complex, and that only legislation can equitably correct the multiple instances of unintentional trespass on private and public lands resulting from landowners' reliance on the erroneous Zipfull survey performed in 1954. Nothing in this legislation is to be construed as establishing a precedent in dealing with other cases involving trespass on the public lands. Further, nothing in this legislation shall be construed as adversely affecting valid private rights on lands outside the land described in the Zipfull survey.

The SPEAKER pro tempore. Is a second demanded?

Mr. DON H. CLAUSEN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The Chair will recognize the gentleman from Wyoming (Mr. RONCALIO) for 20 minutes, and the gentleman from California (Mr. DON H. CLAUSEN) for 20 minutes.

The Chair recognizes the gentleman from Wyoming (Mr. RONCALIO).

Mr. RONCALIO. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, let me say at the outset that H.R. 2501 deals with the so-called Wold Tract within the Medicine Bow National Forest, Wyo. The Wold Tract has nothing to do with my predecessor, Mr. John Wold, formerly a Congressman from Wyoming, who lives in a different part of Wyoming, in Casper. He is one of the eminent men in mineral resources.

The purpose of this legislation is to quiet title in effect on about 120 home and cabin sites located in a tract of land called the Wold subdivision of Medicine Bow National Forest. This tract lies within the Medicine Bow National Forest and consists of 160 acres.

An official cadastral survey was completed by the Bureau of Land Management on November 21, 1898, and the lands were patented under a cash entry patent on March 30, 1900. This official cadastral survey was confirmed and verified in 1966 by a Bureau of Land Management resurvey. However, in 1954, W. E. Zipfull performed a private survey, and based on this survey, which proved to be slightly off bearing, the land was subdivided into 120 lots. Due to the errors associated with the Zipfull survey, portions of 34 of the lots are located on National Forest lands. As an example, those who thought they owned land in the green strips shown on the plat before you have now discovered that they would be denied those portions of the green strip visible, and those who owned portions near the pink strips would now under the correction find themselves owning lots larger than they had. To make a long story short—and I recommend the report to any of the Members who would like the details because the report sets forth in detail the steps that went into this legislation—four of these lots currently have permanent improvements constructed upon them as noted by the black dots on the green strips.

Attempts were made by the Forest Service to resolve this conflict over the years through land exchanges or otherwise, and they have never been successful. This has led the agencies involved to agree that the problem most likely cannot be resolved without legislation of some type. Therefore, this bill would direct the Secretary of the Interior to conduct a new survey of the Wold Tract following the boundary lines of the erroneous Zipfull survey. Upon completion of the new survey, the United States would consider this new survey as representing the official boundary between the National Forest lands and the tract of privately owned lands known as the Wold Tract.

In essence, the Government gains no acreage and loses no acreage. I am in-

debted to my colleague, the gentleman from New Mexico (Mr. RUNNELS), who served with me as a Member of this subcommittee, because to have accepted what the Department of Agriculture wanted would have resulted in individuals gaining or few feet of land being required to pay the Government for the additions, whereas those losing some land would not be compensated for that which they lost. That was an untenable position which the gentleman from New Mexico (Mr. RUNNELS) could not accept.

Therefore, we compromised on two amendments acceptable to the Department of Agriculture, and these amendments emphasize that nothing in the legislation is to be construed as establishing a precedent of dealing with other cases involving trespass on the public lands. Therefore, there is no danger of the erroneous survey setting a precedent as governing conveyances in the future.

Second, the amendment insures that nothing in the legislation is to be construed as adversely affecting valid private rights on lands outside the Wold tract.

Specifically, had it been otherwise done, the 116 lot owners who had not erected permanent improvements, those owning lands within the tract, would have had to resort to State law litigation in settlement of titles; in other words, to get a merchantable title, at great time and expense.

The analysis, the history, and the departmental reports are all included in the report.

Mr. Speaker, I ask my colleagues to react favorably to this legislation, which has been expected, and asked for, for so many years by the particular landowners whose interests are adversely affected, and who have patiently awaited the corrective effect of this legislation.

Mr. RONCALIO. Mr. Speaker, I have no further requests for time.

Mr. DON H. CLAUSEN. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wyoming (Mr. RONCALIO) that the House suspend the rules and pass the bill, H.R. 2501, as amended.

The question was taken.

Mr. HARKIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. RONCALIO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on this bill, H.R. 2501.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

AVIATION INSURANCE AND REINSURANCE

Mr. ANDERSON of California. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6010) to amend title XIII of the Federal Aviation Act of 1958 to expand the types of risks which the Secretary of Transportation may insure or reinsure, and for other purposes, as amended.

The Clerk read as follows:

H.R. 6010

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1301 of the Federal Aviation Act of 1958 (49 U.S.C. 1531) is amended to read as follows:

"DEFINITIONS

"SEC. 1301. As used in this title—

"(1) the term 'American aircraft' means any civil aircraft of the United States and any aircraft owned or chartered by, or made available to, the United States or any department or agency thereof, the government of any State, territory, or possession of the United States, or any political subdivision thereof, or the District of Columbia;

"(2) the terms 'insurance company' and 'insurance carrier' include any mutual or stock insurance company, reciprocal insurance association, and any group or association authorized to do an aviation insurance business in any State of the United States; and

"(3) the term 'Secretary' means the Secretary of Transportation.".

(b) The center heading of title XIII of the Federal Aviation Act of 1958 is amended by striking out "WAR RISK" and inserting in lieu thereof "AVIATION".

SEC. 2. Section 1302 of the Federal Aviation Act of 1958 is amended to read as follows:

"AUTHORITY TO INSURE

"AUTHORITY OF THE SECRETARY

"SEC. 1302. (a) (1) The Secretary, with the approval of the President, and after such consultation with interested agencies of the Government as the President may require, may provide insurance and reinsurance against loss or damage arising out of any risk from the operation of an aircraft in the manner and to the extent provided by this title, whenever it is determined by the Secretary that such insurance cannot be obtained on reasonable terms and conditions from any company authorized to do an insurance business in a State of the United States.

"(2) The President shall approve insurance or reinsurance under paragraph (1) of this subsection only if he has first made a determination that the continuation of the American aircraft, or the foreign-flag aircraft, operation to be insured or reinsured is necessary to carry out the foreign policy of the United States.

"(3) Insurance shall be issued under this title only to cover any risk from the operation of an aircraft while such aircraft is (A) engaged in foreign air commerce, or (B) being operated between two or more points all of which are outside of the United States.

"BASIS OF INSURANCE

"(b) The premium charged for any insurance or reinsurance issued under any provision of this title shall be based, insofar as practicable, upon consideration of the risk involved.

"PERIOD OF COVERAGE

"(c) No insurance or reinsurance may be provided by the Secretary under this title for an initial period of more than sixty days. Such insurance or reinsurance may be extended for additional periods each of which shall not exceed sixty days, but only if, before each such extension, the President makes the same determination with respect to such extension as he is required to make under paragraph (2) of subsection (a) of this section for the initial provision of such insurance or reinsurance.".

SEC. 3. Section 1303 of the Federal Aviation Act of 1958 is amended to read as follows:

"INSURABLE PERSONS, PROPERTY, OR INTERESTS

"SEC. 1303. The Secretary may provide the insurance and reinsurance, authorized by section 1302 with respect to the following persons, property, or interest:

"(1) American aircraft and those foreign-flag aircraft engaged in aircraft operations deemed by the President to be necessary to carry out the foreign policy of the United States.

"(2) Cargoes transported or to be transported on any aircraft referred to in paragraph (1), including shipments by express or registered mail; air cargoes owned by citizens or residents of the United States, its territories, or possessions; air cargoes imported to, or exported from the United States, its territories, or possessions and air cargoes sold or purchased by citizens or residents of the United States, its territories, or possessions, under contracts of sale or purchase by the terms of which the risk of loss or the obligation to provide insurance against such risks is assumed by or falls upon a citizen or resident of the United States, its territories, or possessions; air cargoes transported between any point in the United States and any point in a territory or possession of the United States, between any point in any such territory or possession and any point in any other such territory or possession, or between any point in any such territory or possession and any other point in the same territory or possession.

"(3) The personal effects and baggage of the captains, pilots, officers, members of the crews of any aircraft referred to in paragraph (1), and of other persons employed or transported on such aircraft.

"(4) Captains, pilots, officers, members of the crews of any aircraft referred to in paragraph (1), and other persons employed or transported thereon against loss of life, injury, or detention.

"(5) Statutory or contractual obligations or other liabilities of any aircraft referred to in paragraph (1) or of the owner or operator of such aircraft of the nature customarily covered by insurance.".

SEC. 4 (a) Subsection (b) of section 1305 of the Federal Aviation Act of 1958 (49 U.S.C. 1535) is amended by striking out "rates" each place it appears and inserting in lieu thereof "premiums".

(b) The center heading of such subsection (b) is amended by striking out "RATES" and inserting in lieu thereof "PREMIUMS".

SEC. 5 (a) Subsection (b) of section 1307 of the Federal Aviation Act of 1958 (49 U.S.C. 1537) is amended by striking out "rates of premium provided for in this title: *Provided,* That" and inserting in lieu thereof "the premiums provided for in this title, except that".

(b) The center heading of such subsection (b) is amended by striking out "RATES" and inserting in lieu thereof "PREMIUMS".

SEC. 6 Section 1312 of the Federal Aviation Act of 1958 (49 U.S.C. 1542) is *amended by striking out "May 7, 1977." and inserting in lieu thereof "September 30, 1982.".*

SEC. 7. (a) That portion of the table of contents contained in the first section of the Federal Aviation Act of 1958 which appears under the center heading.

"TITLE XIII—WAR RISK INSURANCE"

is amended by striking out

"TITLE XIII—WAR RISK INSURANCE

"Sec. 1301. Definitions.
"(a) American aircraft.
"(b) War risks.
"(c) Secretary.
"(d) Insurance company and insurance carrier.
"Sec. 1302. Authority to insure.
"(a) Power of the Secretary.
"(b) Basis of insurance.
"Sec. 1303. Insurable persons, property, or interests.
"(a) Aircraft.
"(b) Cargo.
"(c) Personal effects and baggage.
"(d) Persons.
"(e) Other interests."

and inserting in lieu thereof

"TITLE XIII—AVIATION INSURANCE

"Sec. 1301. Definitions.
"Sec. 1302. Authority to insure.
"(a) Authority of the Secretary.
"(b) Basis of insurance.
"(c) Period of coverage.
"Sec. 1303. Insurable persons, property, or interests.".

(b) That portion of the table of contents contained in the first section of such Act which appears under the side heading

"Sec. 1305. Reinsurance."

is amended by striking out

"(b) Rates for reinsurance."

and inserting in lieu thereof

"(b) Premiums for reinsurance.".

(c) That portion of the table of contents contained in the first section of such Act which appears under the side heading

"Sec. 1307. Administrative powers of Secretary."

is amended by striking out

"(b) Forms, policies, amounts insured, and rates."

and inserting in lieu thereof

"(b) Forms, policies, amounts insured, and premiums."

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from California (Mr. ANDERSON).

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the aviation war risk insurance program was authorized in 1951, and was based on the maritime war risk insurance program.

Under the present program the Secretary of Transportation issues two basic policies, premium and nonpremium. The Secretary is authorized, with the approval of the President, to provide war risk insurance for the protection of aircraft and of persons and property transported aboard them when commercial insurance cannot be obtained on reasonable terms and conditions from the insurance market. The program was designed for use by the Government to meet the needs of the United States.

The premium program is intended to provide war risk insurance for U.S. carriers in addition to other available coverage. During periods of stability in the aviation insurance market, "all risk" and "war risk" policies are available on reasonable terms. However, during periods of international crisis, policies covering certain named war risks—any claim for loss or damage occasioned by war, hostilities, insurrection or acts of foreign enemies—have been terminated or otherwise made unobtainable. Under this program, premiums are set high enough so as not to discourage commercial insurance companies to reenter the market after a crisis has passed.

During hearings in July 1975 the committee became aware that commercial insurance underwriters had drafted exclusions in their "all risk" policies following certain hijacking incidents and the Saigon evacuation, including losses and damage resulting from riots, civil disorders, hijacking, and other similar acts. This created the potential for gaps in air carriers' insurance coverage. The implications of U.S. carriers, being unable to operate abroad due to a lack of 100-percent coverage, caused the committee to include a provision in Public Law 94-90 requiring an investigation and study by the President of the need to extend present program coverage beyond the area of what was then considered "war risks."

The Presidential study received on March 22, 1976, recommended that the present program be expanded to authorize the Secretary of Transportation, after appropriate consultation with the Secretaries of State and Defense and with the approval of the President in each case, to provide interim insurance for air carriers—in addition to that for war risks—when not available elsewhere and when required by reasons of foreign policy for the continuation of a particular air service.

In February 1977, hearings were held on the 1976 Presidential study, and the new administration supported the study's recommendations. The bill, as reported, accepts the premise of the study that the present program needs to be expanded to include risks not considered when the original program was enacted in 1951.

The bill contains several safeguards to carry out the fundamental policy that the Government should not provide insurance on a regular or routine basis—that commercial problems should be solved by commercial entities. I urge passage of this important legislation.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the gentleman from California (Mr. ANDERSON) has fully explained the provisions of H.R. 6010, so I will not repeat them. Suffice it to say that the minority members of the Committee on Public Works and Transportation fully participated in the development of this legislation. We believe that the bill which has resulted from our deliberations is one which all of our colleagues can and should support because it addresses a problem which is in the category of those which are beyond the capacity of the private sector to handle. Here we have an instance of the Federal Government acting in an area where private firms simply cannot provide what is needed—certainly an altogether proper role for the Federal Government to play.

I wish to emphasize to my colleagues, Mr. Speaker, that this legislation does not involve the expenditure of a single cent of Federal funds. Through premiums collected from air carriers when covered by this insurance, a fund has been built up over the years which now stands at about $14.5 million. In the 1975 extension of the aviation war risk insurance program, we authorized the Secretary of the Treasury to invest revolving fund moneys in interest bearing securities of the United States—a provision which has resulted in approximately $1 million in interest proceeds being credited to the fund. In contrast, the annual cost of administering the aviation war risk insurance program is only about $56,000 per year. Only in the event of a castastrophic loss would the integrity of the revolving fund be threatened.

Mr. Speaker, I would like to state that, due to uncertain world conditions, there appears to be a pressing need for expanding the coverage of the aviation war risk insurance program to other risks beyond those arising from a war situation—such things as hijacking, riots, and vandalism. One cannot readily predict the next move of international terrorists—and it seems entirely reasonable for us to provide the type of standby authority which is contained in this legislation.

I should point out that we do not spell out in the bill the specific types of expanded coverage which could be authorized. We chose this course because of the need to provide flexibility, the ability to adjust to changing conditions. Nor do we provide a blank check. We require that the President approve any additional coverage which the Secretary of Transportation may recommend.

I do not foresee any potential problem which may arise if this legislation is enacted—although I have expressed concern in the past regarding the possibility that such authority as is granted in this bill could conceivably be invoked in the case of a labor dispute overseas. I trust that the legislative history of this bill will reflect that such is not our intent.

Thank you, Mr. Speaker.

Mr. Speaker, I have no further requests for time.

Mr. ANDERSON of California. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. JOHNSON), the chairman of the full committee.

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 6010, a bill which broadens the scope of, and extends to September 30, 1982, the aviation insurance program.

This program, patterned after the maritime war risk insurance program, has served this country well in times of international stress since 1951. It has allowed the continuation of important commerce between the United States and its trade partners.

During hearings by the House Public Works and Transportation Committee in

1975 we became aware of a new trend on the part of commercial insurance underwriters to exclude certain losses from "all risk" policies which did not fall within traditional "war risk" policies. This has created the potential for "gaps" in air carrier coverage. Following these hearings the committee required a Presidential investigation and study of the need to extend the program beyond the area of what traditionally has been considered "war risks."

This bill accepts the premise of the President's report that the present program needs to be expanded to include risks not considered when the original program was enacted in 1951.

The bill contains several safeguards to carry out the fundamental policy that the Government should not provide insurance on a regular or routine basis—that commercial problems should be solved by commercial entities. First, this remains a discretionary program—no air carrier has a right to the issuance of a policy. Second, the Secretary of Transportation, before issuing a policy, must consult with such agencies as the President directs. Third, the President must approve the issuance of each policy, and such approval can only be given if the President finds that continuation of the flight or flights to be insured is necessary to carry out the foreign policy of the United States. Fourth, policies cannot be issued for periods exceeding 60 days—reissuance requires the same Presidential finding as to foreign policy.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. SNYDER. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill (H.R. 6010), as amended.

The question was taken.

Mr. BLOUIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 6010, just considered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

DISASTER RELIEF ACT AUTHORIZATION

Mr. ROBERTS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6197) to amend the Disaster Relief Act of 1974 to provide for authorization of appropriations thereunder through fiscal year 1978, as amended.

The Clerk read as follows:

H.R. 6197

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 606 of the Disaster Relief Act of 1974 is amended by striking out "June 30, 1977" and inserting in lieu thereof "September 30, 1978".

SEC. 2. Section 5 of the Flood Control Act approved August 18, 1941 (33 U.S.C. 701n) is amended by inserting "(a)" immediately after "SEC. 5." and by adding at the end thereof the following new subsection:

"(b)(1) The Secretary, upon a written request for assistance under this paragraph made by any farmer, rancher, or political subdivision within a distressed area, and after a determination by the Secretary that (A) as a result of the drought such farmer, rancher, or political subdivision has an inadequate supply of water, (B) an adequate supply of water can be made available to such farmer, rancher, or political subdivision through the construction of a well, and (C) as a result of the drought such well could not be constructed by a private business, the Secretary, subject to paragraph (3) of this subsection, may enter into an agreement with such farmer, rancher, or political subdivision for the construction of such well.

"(2) The Secretary, upon a written request for assistance under this paragraph made by any farmer, rancher, or political subdivision within a distressed area, and after a determination by the Secretary that as a result of the drought such farmer, rancher, or political subdivision has an inadequate supply of water and water cannot be obtained by such farmer, rancher, or political subdivision, the Secretary may transport water to such farmer, rancher, or political subdivision by methods which include, but are not limited to, small-diameter emergency water lines and tank trucks, until such time as the Secretary determines that an adequate supply of water is available to such farmer, rancher, or political subdivision.

"(3)(A) Any agreement entered into by the Secretary pursuant to paragraph (1) of this subsection shall require the farmer, rancher, or political subdivision for whom the well is constructed to pay to the United States the reasonable cost of such construction, with interest, over such number of years, not to exceed thirty, as the Secretary deems appropriate. The rate of interest shall be that rate which the Secretary determines would apply if the amount to be repaid was a loan made pursuant to section 7(b)(2) of the Small Business Act.

"(B) The Secretary shall not construct any well pursuant to this subsection unless the farmer, rancher, or political subdivision for whom the well is being constructed has obtained, prior to construction, all necessary State and local permits.

"(4) The Federal share for the transportation of water pursuant to paragraph (2) of this subsection shall be 100 per centum.

"(5) For purposes of this subsection—

"(A) the term 'construction' includes construction, reconstruction, or repair;

"(B) the term 'distressed area' means an area which the Secretary determines due to drought conditions has an inadequate water supply which is causing, or is likely to cause, a substantial threat to the health and welfare of the inhabitants of the area including threat of damage or loss of property;

"(C) the term 'political subdivision' means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over the water supply of such public body;

"(D) the term 'reasonable cost' means the lesser of (i) the cost to the Secretary of constructing a well pursuant to this subsection exclusive of the cost of transporting equipment used in the construction of wells, or (ii) the cost to a private business of constructing such well;

"(E) the term 'Secretary' means the Secretary of the Army, acting through the Chief of Engineers; and

"(F) the term 'State' means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.".

The SPEAKER pro tempore. Is a second demanded?

Mr. DON H. CLAUSEN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. ROBERTS) will be recognized for 20 minutes, and the gentleman from California (Mr. DON H. CLAUSEN) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I wish to commend the gentleman from California, BIZZ JOHNSON, the distinguished chairman of the Committee on Public Works and Transportation, for his excellent leadership of our committee. I also wish to commend the ranking minority members of the full committee and the Subcommittee on Water Resources, the gentleman from Ohio, BILL HARSHA, and the gentleman from California, DON H. CLAUSEN.

Mr. Speaker, as has been pointed out, H.R. 6197 is an extension of authorization for appropriations for the Disaster Relief Act of 1974.

In the past, the Congress has enacted a number of laws providing for disaster relief. The culmination of these efforts was the Disaster Relief Act of 1974, Public Law 93-288.

Public Law 93-288 became effective on April 1, 1974. In the 3-year period from that date to March 31, 1977, there were 109 Presidential "major disaster" declarations and 37 "emergency" declarations. Additionally, under section 417 of the act, provision of fire suppression assistance was authorized by FDAA in 10 instances. The ultimate cost of this assistance to the disaster relief fund is estimated at $717 million.

Assistance authorized by the act may be classified under three broad categories: Assistance to individuals, assistance to State and local governments, and preparedness assistance. Programs funded through the authority of this act include: Temporary housing; disaster related unemployment compensation; individual and family grants; legal aid for disaster related problems; distribution of food commodities and coupons; crisis counseling; relocation assistance; community disaster loans; repair and restoration of public and private nonprofit facilities; and debris removal from public and private property.

The Disaster Relief Act of 1974 authorized such sums as may be necessary to carry out the Federal disaster program for a term of 3 years. That authorization expires this year. H.R. 6197, as reported by the committee, would extend the authorization for an additional year through fiscal year 1978. It would also authorize emergency assistance by the Corps of Engineers for drought-stricken areas.

Mr. Speaker, the distinguished chairman of Public Works and Transportation mentioned that while the committee felt that the Federal disaster program was workable and viable, that it was not without some problems. One of these problems has surfaced in the area of emergency assistance.

During the harsh winter of 1976–77, a number of States sustained severe damage to public facilities such as water systems, roads, streets, highways, and bridges from heavy snow, freezing, and thawing, along with sustained periods of below-normal temperatures. Among these were Indiana, Michigan, New York, Ohio, Pennsylvania, West Virginia, Maryland, Virginia, and Florida.

Some areas, such as the counties surrounding Buffalo, N.Y., and some States, such as Maryland, Virginia, and Florida, were declared major disaster areas and received extensive assistance. However, in four States—Indiana, Michigan, Ohio, and Pennsylvania—the President only declared emergencies.

At least five States have reported winter damage to water systems conservatively totaling almost $30 million. These are States where no Presidential declaration of disaster was issued. Damages reported thus far include $17 million in Ohio, $13 million in Pennsylvania, $4.5 million in West Virginia, $2.5 million in New York, and $1.5 million in Indiana. These damages have caused those areas to be without any source of water for as long as 12 weeks. Some small communities are still piping in temporary supplies of water for essential uses because their water systems are completely out of order. In Indiana serious damages occurred to highways because of the extreme weather conditions.

In all of these cases emergencies were declared. Yet relief available under the Disaster Relief Act was not granted on the grounds that it could only be provided in the event of a major disaster. This is not a correct interpretation of the act. This was acknowledged by the Administrator of the Federal Disaster Assistance Administration, Thomas P. Dunne, in testimony before the Subcommittee on Water Resources on H.R. 6197.

Section 305(c) of the Disaster Relief Act provides that "In any emergency, the President is authorized to provide such other asistance under this act as the President deems appropriate." The purpose of this provision is to enable emergency assistance to be tailored to the specific needs of a particular emergency. It recognizes that all of the provisions of the act may not be applicable in an emergency situation. But it is the intent of this provision that all applicable provisions should apply in the case of an emergency declaration. This is the meaning of the phrase "As the President deems appropriate." If highways, bridges, and water systems are damaged or destroyed, then the assistance for repair and restoration of damaged facilities is to be made available. Similarly, other assistance is to be made available as needed in an emergency.

The committee expects the Federal Disaster Assistance Administration to make the necessary changes in its regulations and its implementation of the act to insure that full compliance with the intent of the law with regard to emergency assistance is achieved.

Mr. Speaker, in spite of some inequities, I believe we have in the Disaster Relief Act a necessary and essential supplement to our State and local governments as they try to "pick up the pieces" after a disaster or emergency has hit. H.R. 6197 would extend this program for 1 year, and I urge the Members to vote for its passage.

Mr. JOHNSON of California. Mr. Speaker, will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker. I want to commend the gentleman from Texas, RAY ROBERTS, chairman of the Subcommittee on Water Resources, for his leadership in bringing H.R. 6197 to the Members today. I also want to commend the gentleman from Ohio, WILLIAM HARSHA, the ranking minority member on the full committee, and the gentleman from California (DON CLAUSEN), the ranking minority member of the Subcommittee on Water Resources, for their support.

Mr. Speaker, H.R. 6197 is an extension of authorization for appropriations for Public Law 93–288, the Disaster Relief Act of 1974. The enactment into law of Public Law 93–288 represented an effort on the part of the Congress to bring about a streamlined and more effective Federal response to the catastrophies which befall our Nation each year.

In the 3 years since passage of the disaster Relief Act of 1974 the program has not been without its problems. However, I believe that on the whole we have in Public Law 93–288, a viable, workable aid to our Nation as it attempts to cope with disasters and emergencies.

Mr. Speaker, the Federal Disaster relief program is designed to supplement the efforts and available resources of State and local governments and voluntary relief organizations.

The President's declaration of a "major disaster" or an "emergency" authorizes Federal assistance under Public Law 93–288 and triggers other Federal disaster relief programs.

The Federal response is coordinated by the Federal Disaster Assistance Administration of the Department of Housing and Urban Development. The Disaster Relief Act of 1974 authorized such sums as may be necessary to carry out the Federal disaster program for a term of 3 years. That authorization expires this year. Section 1 would extend the authorization for an additional year.

Section 2 of the bill will provide for relief in drought situations. It authorizes the Secretary of the Army to construct wells upon the request of a farmer, rancher, or community for water supply where the private sector does not have the capability.

The cost of construction of these wells would be repaid to the Federal Government. This section would also authorize the Corps of Engineers to transport water to a drought area in certain circumstances.

Mr. Speaker, H.R. 6197 is essential to the continuation of the Federal disaster relief program, and I urge the Members to vote for its passage.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 6197, which provides extensions of authorizations for the Federal Disaster Relief Act. My distinguished colleague, the gentleman from Texas, has aptly explained this bill and I shall not attempt to repeat his explanation.

The Federal Disaster Assistance Administration has provided a great service to the citizens of our Nation demonstrating to victims of natural disasters that their Government does care for their welfare. However, I note that H.R. 6197 is a 1-year extension of the Disaster Relief Act. This 1-year extension recognizes that it would be timely to make a full review of the adequacy of the program and responsiveness to needs. The disaster relief program has been developed over the years on a disaster-to-disaster basis. There has been a lack of comprehensive evaluation and updating. I believe the time has come to begin oversight hearings on needed changes to the law.

Section 2 of H.R. 6197 contains a provision I sponsored which is intended to provide authority to the Corps of Engineers to utilize existing Federal resources, and I must emphasize existing Federal resources, to provide the means necessary for providing a supply of water to farmers and ranchers for livestock and domestic use and to local communities for municipal needs. This authority is a limited response to provide relief to those areas that have not received a Federal disaster declaration. There are some strict guidelines that must be followed to use this provision: First, the Secretary of the Army must determine that an applicant is suffering damage as a result of drought; and second, he must determine that an adequate supply of water can be provided to the applicant. Before the Secretary can utilize the well-digging capabilities of the Corps of Engineers, he must further determine that the private sector cannot provide this service in a reasonable time frame. This does not mean that because there is a backlog in the private sector that the corps can step in. Rather, the corps can provide this assistance only when no one else can provide necessary service in a time frame to prevent the applicant from water supply shortages and related damages.

It is expected that the Secretary of the Army, acting through the Chief of Engineers, will vigorously carry out these new authorities. In addition, it is intended that the corps will work closely with the

Economic Development Administration and the Farmers Home Administration in order to facilitate the implementation of the Community Emergency Drought Relief Act which will be taken up by this body later this afternoon.

S. 1279, the Community Emergency Drought Relief Act of 1977, provides for grants and loans to communities to construct or reconstruct water supply systems and includes an authorization to transport water to drought distressed communities. Section 2 of H.R. 6197 complements this authority by authorizing the Corps of Engineers to use their capabilities to aid communities receiving assistance under S. 1279. The corps, if equipment and personnel are available, can construct the needed facilities or transport the water as necessary using the authorities of section 2 of H.R. 6197 when such facilities or transportation are consistent with the corps authorities under H.R. 6197.

It is estimated, based on data provided by the Corps of Engineers itemizing their capabilities, that when fully implemented it would cost $5 to $15 million per year depending on the severity of drought. However, I should point out that the expense incurred for well digging would be reimbursable to the Federal Treasury.

The Congressional Budget Office cost estimate is set forth on pages 7 through 9 of the committee report, 95–302. They originally estimated that the cost for section 2 of H.R. 6197 is "estimated to be $50 to $150 million for fiscal year 1978 and each succeeding year." As CBO pointed out, they had little information on the potential cost of section 2. Their initial estimate was based on informal discussions with the "staff of the Corps of Engineers and other involved parties." They did not have a copy of the committee report language for guidance. The CBO cost estimate far exceeded the intent of this legislation. Their estimate included costs for irrigation water and costs for contractor-supplied equipment and services. It is not intended that water be provided for irrigation purposes and it is not intended that contractor supplied equipment and services be utilized to carry out section 2. I quote from our committee report on page 4:

It is further intended that the Secretary of the Army, in exercising his authority to drill wells and transport water, will utilize equipment owned by the United States to the maximum extent possible.

I further quote from our committee report:

The authorization to transport water is intended to apply to water needed for livestock and human consumption but not for irrigation of crops.

Section 2 of the bill does not authorize the corps to provide water for irrigation purposes basically because this authority is not within the jurisdiction of this committee. It falls under the jurisdiction of the Water and Power Resources Subcommittee of the Committee on Interior and Insular Affairs. That committee, on which I am also a member, reported the recently enacted bill which addresses the needs of irrigators. Finally, it is not intended that funds authorized by this bill be used to pay the cost of purchase of water.

I repeat, when CBO made their original estimate, copies of our report were not available. After consultation with CBO and after CBO discussions with the corps, a revised cost estimate of $15 million per year was submitted by CBO.

Mr. Speaker, I urge the passage of H.R. 6197.

Mr. Speaker, I include herewith a copy of the revised CBO cost estimate letter which was submitted pursuant to section 403 of the Congressional Budget Act of 1974, as follows:

CONGRESSIONAL BUDGET OFFICE,
Washington, D.C., May 16, 1977.

Hon. HAROLD T. JOHNSON,
Chairman, Committee on Public Works and Transportation, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter addresses the estimated costs of Section 2 of H.R. 6197 which amends Section 5 of the Flood Control Act approved August 18, 1941 (33 U.S.C. 701n). On May 12, 1977, the Congressional Budget Office issued a formal cost estimate on this bill as ordered reported by the House Committee on Public Works and Transportation. In that estimate, a potential cost of $50 million to $150 million was indicated for Section 2. This estimate assumed that the drought relief activities would include crop irrigation and also that many of these activities would be performed by contract with private firms.

Subsequent to transmitting this estimate some questions have been raised about the magnitude of the possible costs for Section 2. If the committee were to exclude drought relief for irrigation of crops; to limit the implementation of the provisions of Section 2 to federally-owned equipment presently in drought areas; to exclude federal purchase of the transported water; then the costs of this section would be approximately $15 million annually.

It should be further noted that funds for Section 2 activities would become available upon enactment of this legislation. Therefore, if H.R. 6197 is enacted before September 30, 1977, the bill could have an impact on the fiscal year 1977 budget.

Should the Committee so desire, we would be pleased to provide further discussion of this cost estimate.

Sincerely,

JAMES BLUM,
(For Alice M. Rivlin)
Director.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. HARSHA).

Mr. HARSHA. Mr. Speaker, I feel compelled to call to the attention of my colleagues from my home State of Ohio, as well as the States of Indiana, Michigan, and Pennsylvania to the statement on this bill which appears in the committee report.

During consideration of H.R. 6197, the Water Resources Subcommittee developed information regarding administration misinterpretation of the Disaster Relief Act which amounts to an inexcusable failure to carry out both the spirit and intent of the law. I feel compelled to point these failures out as unwarranted bureaucratic denials to the States and local governments of the benefits and assistance intended by the Public Works and Transportation Committees and the Congress when it established the statutory mechanisms to trigger disaster and emergency relief for the repair or restortion of damaged public facilities.

Without belaboring this body, I wish to point out that those of us representing the States I have mentioned, as well as those from other States, know that badly needed assistance has been denied to States and local governments by the Federal Disaster Relief Administration on the false premise that it takes a Presidential major disaster declaration to obtain those program aids. We proved in the subcommittee hearings that such an interpretation is incorrect. There is authority for such assistance in emergencies in section 305(c).

I wish my colleagues to know that I had prepared for introduction in the subcommittee certain amendments to clarify this matter—in the event FDAA took the position that the law as it exists does not make these programs available under declarations of emergency or disaster. But the Administrator of FDAA openly admitted the law provides the authority to do this, but FDAA simply is not carrying it out. Therefore, I withdrew the amendments on agreement with the subcommittee chairman, the gentleman from Texas, Mr. ROBERTS, that a strong statement pointing this out would be included in the committee report.

I call attention to the statement in the committee report for this reason so that my colleagues will know this problem was not overlooked in subcommittee. The report calls for a full report no later than September 30 from the executive branch of the relief afforded for the repair and restoration of public facilities damaged because of disasters or emergencies during this past winter.

In conclusion, let me assure my colleagues that if the agency does not follow through and provide the relief requested, it is our firm intention to call them to account during oversight hearings.

One final point, Mr. Speaker. We have before us today S. 1279, which is the Senate-passed version of the administration's drought relief bill. My name appears as a cosponsor on the House version of this bill. That should be adequate to demonstrate my support for relief for drought impacted areas. However, our action on drought relief today underscores the need for justice in our treatment of communities which have been unjustly denied relief for repair of winter damage. We cannot on the one hand provide drought relief and allow it to be denied unjustly for winter damage. We have an obligation to see to it that the States and local governments which sustained damage to public facilities during winter emergencies receive Federal assistance to restore those facilities to full use, as the law provides.

Mr. LEGGETT. Mr. Speaker, I rise in support of this legislation which, in effect, extends the Disaster Relief Act of 1974 through fiscal year 1978, and provides permanent authority for the Secretary of the Army to construct wells and transport water to drought areas.

As chairman of the Ad Hoc Drought

Committee for the California delegation, I would like to share with you some of our thoughts and concerns so that you may better understand why passage of this legislation is so important to those of us from the drought-stricken West and Midwest.

Since nationwide data on the continuing drought is sparse at best, I would like to concentrate my remarks solely on the plight of my own State of California.

Let me begin by summarizing our current State water outlook for 1977 which can only be described as parched. Precipitation over Northern California during the month of March was again below normal for the 6th consecutive month, averaging only 30 percent of the monthly norm in previous years. Moreover, many locations have received record low seasonal precipitation amounts.

In addition, snowpacks, which usually account for approximately 70 percent of the State's water, had depths that were only about 30 percent of normal in February. Near Donner Summit in the High Sierras, for instance, the snowpack in March was 27 inches—fully 61 inches below normal. To make matters worse, the snow that did fall was abnormally dry containing only one-fifth of the normal moisture content, and the April 1st snow surveys showed that 15 out of 17 major river basins in the Central Valleys have the lowest snow water storage recorded in the last 47 years.

Contributing to the problem of such record low snowpacks is the fact that the soil is so dry in the mountains that several inches of rainfall will now be required before watersheds are again able to produce any significant runoff. April forecasts indicate that 6 out of 22 major streams flowing into the Central Valley and the Eastern Sierra will have record low flows, and State experts are predicting that the total Spring runoff into the Central Valley will be only 40 percent of normal.

Since the present capacity of all 143 major reservoirs in California amounts to only 12.5 million acre feet as opposed to their normal combined capacities of 33.7 million acre feet, these record low stream flows do not bode well for large water users. A rundown of the water levels in some of the State's major reservoirs reveals that Lake Orville is 45 percent full, Millerton Lake 43 percent, Lake Shasta 32 percent, Folsom Lake 25 percent, the San Francisco water system 24 percent, and East Bay Municipal Utilities District reservoirs only 13 percent. Hetch Hetchy in Yosemite National Park has dropped over 244 feet, and drought conditions have shrunk its usual 7-mile length down to 3 miles.

Statewide, water storage is only 55 percent of average and the snow water content for summer runoff is only 25 percent of normal. Since this year's rainy season has already passed, there is little or no possibility of relief from the drought before November. Indeed, even if by some miracle we do get wet weather in the months ahead, depleted reservoirs and dry soil conditions will assure that the effect of our great western drought will continue well into 1978 for California. And even if 1978 were to bring with it a return to more normal rainfall and snow, the water supply deficits inherited from this year would be extremely difficult to erase. Moreover, we cannot assume that 1978 will be wet, nor that it will be the last dry year in a row for California, especially since we have had up to as many as 6 consecutive years in the past when precipitation was below normal.

Let me now turn to the magnitude of potential drought-related losses confronting my State economy as a whole for 1977.

Unlike most natural disasters which start abruptly, end distinctly, and leave readily identifiable, verifiable, and quantifiable damage, drought is a creeping phenomenon—a cancer against the land—resulting in losses that oftentimes defy precise computation and continue to plague us for many years afterwards. This is especially true in agriculture where the continuing drought is having its most devastating effect. Indeed, some 85 percent of California's water is used for farming, livestock, or agribusiness operations of one form or another. This allocation is quite appropriate, I might add, given that our State produces over 10 percent of the Nation's total agricultural needs and supplies almost 25 percent of the Nation's dinner table needs making agriculture our single largest industry, so to speak. Therefore, to get a proper handle on California's potential drought-related losses for 1977, we must first start with agriculture where some of the richest land in the world—when it is properly irrigated—is now drying up due to life-sucking drought.

State agricultural economists predict that this $9 billion industry will lose between $790 million and $2 billion in productive agricultural capacity during 1977 with the most probable gross loss placed at $1.3 billion.

Dryland grain farmers and nonirrigated rangeland livestock producers will suffer the greatest losses in 1977. However, even irrigated agriculture will be hard hit this year since water available for irrigating crops will be reduced statewide by an average of one-third as a result of insufficient surface runoff and declining water tables. In some areas, only enough water remains for one good irrigation compared to the usual 15–20 irrigations required for healthy crops.

Precisely how such projected water cutbacks have affected farmers' decisions about what to plant this year will not be known until after crop surveys are completed at the end of the month. Generally, though, farmers are expected to reduce acreages of such high-water crops as rice, sugar beets, tomatoes, alfalfa, cotton, and corn, and substitute water-conserving crops like barley, oats, safflower, and wheat. To illustrate the potential water savings by such water conservation measures, barley uses only half an acre foot of water per acre of production as opposed to 2.9 acre feet for corn and almost 8 acre feet for rice. However, such actions by themselves are just not enough to see us through the year.

Some of California's small dairy farmers have already gone out of business along with a small number of cattle and sheep ranchers. Most of these livestock operators graze their herds on nonirrigated pastureland. However, without rain, much of this land—which would normally be knee high in grass at this time of year—is now nothing more than bare ground. Ranchers are having to truck in hay and alfalfa pellets at exorbitant prices ranging from $90 to $110 a ton. Those who can no longer afford such cash drains have been forced to sell their stock early to feed lots or slaughterhouses just to curtail their losses. Evidence exists that some ranchers are even slaughtering their breeding stock as a result of such high feed costs. The average loss according to the California Cattlemen's Association is between $100 and $150 per head, and State experts estimate that the State's livestock industry, which customarily accounts for about one-third of the State's agricultural economy, will in all likelihood suffer a loss in 1977 of more than $500 million.

Directly associated with these dire agricultural problems is a corresponding decline in the revenues of many small businesses that support the family farmers and dairymen in the many rural communities of California's Great Central Valley. Implement dealers report that sales have fallen drastically. Sales last year dropped about 50 percent from 1975 levels. During the first quarter of 1977, such sales have been zero. Similarly, fertilizer manufacturers will experience declines in sales.

As this whole situation spirals and filters down through the entire State economy, overall drought-related losses for 1977 truly become staggering. An economist with the State Department of Water Resources has estimated that under the most optimistic scenario, the continuing drought could cost $2.9 billion in gross State product and 57,000 lost jobs during 1977. Under the most likely scenario, fully $4.5 billion and 140,000 jobs could be lost. And under the most pessimistic forecast, nearly $6.3 billion and 259,000 jobs could conceivably be lost.

Beyond such purely economic losses are the distinct possibilities of: Rolling blackouts due to drought-related power shortages this summer and fall; a greater incidence of forest and brush fires brought on by tinder-dry drought conditions; deterioration of water quality due to low river flows which mean less diluted discharges from secondary waste treatment plants; increased salinity levels especially in the delta proving detrimental to local fish, wildlife, agriculture, and industry alike; increased air pollution as hydroelectric power losses are made up by burning fuel oil in steam-generating plants; and threatened loss of fish and wildlife as spawning streams dry up, water temperatures increase in streams and reservoirs, and grazing forage is lost in the wildlands. Although the full impact of such intangible losses may not be felt for some years to come, they, too, must be factored into any determination of the net damage or disruption caused by the continuing drought.

Such potential disruptions are unconscionable as long as we have at our disposal the means to ameliorate even a small portion of these projected losses yet fail to respond in a positive and timely manner. This bill before us today is by no means a comprehensive solution to the problems of a continuing extreme drought. However, it is an encouraging start which will both authorize necessary sums in fiscal year 1978 for continuation of the Federal disaster relief program coordinated by the Federal Disaster Assistance Administration and, for the first time, permit us to strike directly at the root source of our grave circumstances—an absolutes shortage of life-giving water—through new Federal programs for water well construction loans and emergency water transportation grants.

Therefore, I strongly urge my colleagues to support these essential first steps in coming to grips with the adverse effects caused by continuing drought in our West and Midwest.

Thank you.

Mr. ROBERTS. Mr. Speaker, I have no further requests for time.

Mr. DON H. CLAUSEN. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. ROBERTS) that the House suspend the rules and pass the bill H.R. 6197, as amended.

The question was taken.

Mr. BLOUIN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

DEEPWATER PORT ACT AUTHORIZATION

Mr. ROBERTS. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6401) to authorize appropriations for the administration of the Deepwater Port Act of 1974, as amended.

The Clerk read as follows:

H.R. 6401

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 25 of the Deepwater Port Act of 1974 (Public Law 93-627) is hereby amended to read as follows:

"AUTHORIZATION FOR APPROPRIATIONS

"SEC. 25. There is authorized to be appropriated for administration of this Act, not to exceed $2,500,000 per fiscal year for the fiscal years ending June 30, 1975, June 30, 1976, September 30, 1977, September 30, 1978, September 30, 1979, and September 30, 1980.".

The SPEAKER pro tempore. Is a second demanded?

Mr. DON H. CLAUSEN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. ROBERTS) will be recognized for 20 minutes, and the gentleman from California (Mr. DON H. CLAUSEN) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I bring to the floor, H.R. 6401, a bill authorizing additional appropriations for administration of the Deepwater Port Act of 1974.

I wish to commend the distinguished chairman of the committee, the gentleman from California (Mr. JOHNSON) for the usual fine leadership he has shown during the course of our consideration of this legislation. I want also to thank the ranking minority member of the committee, the gentleman from Ohio (Mr. HARSHA), the ranking minority member of the Subcommittee on Water Resources, the gentleman from California (Mr. DON H. CLAUSEN) and all of the members of the subcommittee and full committee for the cooperation and assistance they gave in connection with this legislation.

H.R. 6401, as reported, authorizes appropriations of $2,500,000 for each of fiscal years 1978, 1979, and 1980 for administration of the Deepwater Port Act of 1974. This act provides for Federal licensing and regulation of offshore ports designed to receive oil from vessels too large to enter conventional ports. It authorizes the Secretary of Transportation to license owners and operators and to issue regulations to control the location, construction and operation of deepwater ports. The purpose of the act is to provide a mechanism for permitting the construction and operation of deepwater port facilities while ensuring the protection of the marine and coastal environment and recognizing and protecting the interests of affected States.

The Deepwater Port Act of 1974 authorized appropriations of $2,500,000 per fiscal year through fiscal year 1977. H.R. 6401 extends this authorization through fiscal year 1980.

H.R. 6401 was jointly referred to the Committee on Public Works and Transportation and the Committee on Merchant Marine and Fisheries. The Committee on Merchant Marine and Fisheries has expressed its concurrence in this committee's action with regard to H.R. 6401 in order to enable the requirement of the Congressional Budget Act concerning reporting of authorizing legislation by May 15 to be met.

Mr. Speaker, I urge enactment of the bill.

Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. JOHNSON), the chairman of the full committee.

Mr. JOHNSON of California. Mr. Speaker, I wish to commend the chairman of the Subcommittee on Water Resources, the gentleman from Texas (Mr. ROBERTS), for the excellent job he has done in bringing this bill to the floor. I also wish to express my appreciation for the usual fine support and assistance of the ranking minority member of the committee, the gentleman from Ohio (Mr. HARSHA) and the ranking minority member of the subcommittee, the gentleman from California (Mr. DON H. CLAUSEN), as well as all of the members of the subcommittee and full committee.

H.R. 6401 authorizes appropriations of $2,500,000 per fiscal year through fiscal year 1980 for administration of the Deepwater Port Act of 1974. This act provides for the regulation of the construction and operation of deepwater port facilities which are designed for offloading of oil from the very large supertankers. The act is designed to insure that the marine and coastal environment is protected while at the same time permitting the use of the more economical large ships which cannot utilize our coastal and other ports.

The bill was referred both to our committee and to the Committee on Merchant Marine and Fisheries. I wish to thank the distinguished chairman of the committee, the gentleman from New York (Mr. MURPHY) for his gracious cooperation in concurring in our committee's action on this bill so that we could meet the May 15 deadline imposed by the Congressional Budget Act.

Mr. Speaker, I urge enactment of the bill.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, on January 17, 1977, then Secretary Coleman of the Department of Transportation, sent to Congress a request that Congress authorize such funds as may be necessary for the administration of the Deepwater Ports Act. We instead properly opted to authorize $2.5 million a year for 3 additional fiscal years. It was important in my opinion to do this in order that we might maintain some level of control over the operation of the deepwater ports program.

Two license applications have been approved to construct and operate deepwater ports in the Gulf of Mexico off the coast of Louisiana and Texas. However, I fully expect additional requirements will result in applications from one or more locations along the east coast. The economic, social, environmental, and political implications of deepwater ports are great and it is important for our committee and Congress to maintain close control and scrutiny over this program.

I urge the passage of H.R. 6401.

Mr. ROBERTS. Mr. Speaker, I have no further requests for time.

Mr. DON H. CLAUSEN. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. ROBERTS) that the House suspend the rules and pass the bill H.R. 6401, as amended.

The question was taken.

Mr. VOLKMER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3(b) of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that all Members

may have 5 legislative days in which to revise and extend their remarks on the bills H.R. 5885, H.R. 6197, and H.R. 6401.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

SOLAR ENERGY FEASIBILITY STUDY

Mr. MINETA. Mr. Speaker, I move to suspend the rules and agree to the resolution (H. Res. 322) to study the feasibility of installing solar energy equipment in the House office buildings, as amended.

The Clerk read as follows:

H. RES. 322

Whereas the House of Representatives finds that in the construction or renovation of buildings, the cost of energy consumed over the life of such buildings must be considered as well as the initial cost of such construction or renovations; and

Whereas the House of Representatives finds that the use of current solar energy technology can assist the Nation in meeting its needs for energy for hot water, heating, and cooling systems; and

Whereas the House of Representatives deems it of benefit to the Nation to promote the use of solar energy; and

Whereas the House of Representatives has a responsibility to promote such use in the national interest; and

Whereas the House of Representatives finds that using solar energy in buildings occupied by its Members or staff may further these objectives: Now, therefore, be it

Resolved, That (a) not later than one year after the date of the adoption of this resolution, the Architect of the Capitol (hereinafter referred to as the "Architect") shall—

(1) conduct a feasibility study of using solar energy in connection with the heating, cooling, and hot water systems or subsystems of—

(A) the House Office Building Annex Numbered 2;

(B) the Cannon, Longworth, and Rayburn House Office Buildings and related structures; and

(C) other House office building annexes and related structures; and

(2) prepare and transmit a report to the House of Representatives.

(b) In conducting the study required by subsection (a)(1), the Architect shall consider and make findings with respect to—

(1) the costs, structural requirements, and time requirements of installing solar energy equipment;

(2) the costs of operation, including the cost of energy consumed over the life of each such building or structure, after such equipment is installed; and

(3) any other factors the Architect considers relevant to such installation or operation.

Such findings shall be made by the Architect for such separate system or subsystem described in subsection (a)(1) within each separate House office building and for each combination of such systems or subsystems within each such building or combination of such buildings.

(c) The reports required by subsection (a)(2) shall include the findings made by the Architect under subsection (b) and his conclusions and recommendations concerning the practicability and desirability of implementing, separately or in combination, any of the utilizations studied by the Architect under this resolution.

SEC. 2. The Architect may enter into contracts to carry out the study required by this resolution.

SEC. 3. The Committee on Public Works and Transportation is authorized to incur expenses for studies and investigations (not in excess of $50,000) as the committee considers advisable, in order to carry out the provisions of this resolution in support of the Architect. Such expenses shall be paid out of the contingent fund of the House on vouchers submitted by the Architect, authorized by the committee, signed by the chairman thereof, and approved by the Committee on House Administration. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration in accordance with existing law, and shall be available to carry out the purpose of this resolution for a period of one year after the date of adoption of this resolution.

The SPEAKER pro tempore. Is a second demanded?

Mr. WALSH. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. MINETA) and the gentleman from New York (Mr. WALSH) are recognized for 20 minutes each.

The Chair recognizes the gentleman from California (Mr. MINETA).

Mr. MINETA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I move to suspend the rules and pass House Resolution 322, as amended.

Mr. Speaker, House Resolution 322, as amended, would direct the Architect of the Capitol to conduct a feasibility study and report on using solar energy in connection with the heating, cooling, and hot water systems of the House office building complex. The resolution gives priority to House Office Building Annex No. 2, which is currently undergoing extensive renovations and which, with its flat roof, appears the most likely building for retrofitting. The Architect would be directed to consider and make recommendations regarding costs, structural, and time requirements of solar energy equipment installation and the cost of operation including energy consumed over the life of each building. Further, the resolution provides that no later than 1 year after adoption of this resolution, the Architect shall prepare and transmit a report to the House of Representatives which shall include his conclusions and recommendations concerning the practicability and desirability of implementing any of the utilizations studied for this report.

Inadvertently, the committee report accompanying House Resolution 322, as reported with an amendment, did not include an explanation of the amendment, therefore I would like to offer a brief explanation.

Section 3 of House Resolution 322, as introduced, provided an authorization for appropriations for the study funds not to exceed $50,000 under the appropriation heading "Capitol Powerplant" to be expended by the Architect of the Capitol under the direction of the House Office Building Commission. Subsequently, it was determined that if this language were retained, the resolution which pertains solely to a matter under the jurisdiction of the House of Representatives would have to be referred to and passed by the Senate. Accordingly, House Resolution 322 was amended to provide that the Committee on Public Works and Transportation would be authorized to incur the expenses for the study, not to exceed $50,000. The expenses would be paid out of the contingency fund of the House on vouchers submitted by the Architect, authorized by the committee, signed by the chairman, and approved by the Committee on House Administration.

This is clearly the most expeditious and efficient method of funding the study by the Architect. It is intended that the report, including the feasibility study, submitted by the Architect to the House of Representatives, would be transmitted through the chairman of the Committee on Public Works and Transportation.

Mr. Speaker, Congress has recognized the fact that the country needs to establish an effective national conservation program and that we need to develop renewable and essentially inexhaustible energy sources to insure long-term economic growth. Solar energey can assist the Nation in meeting a portion of its needs for energy. Passage of House Resolution 322 is designed to assist in that goal and will demonstrate Congress' intent in its own environment to conserve energy. We need to set an example. Further, the experience and information gained from enactment and implementation of this resolution can be transferred to the private sector thereby furthering our goal of developing and promoting alternative sources of energy.

Mr. WALSH. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I join my distinguished colleague from California in support of House Resolution 322, which would require a feasibility study of installing solar energy devices in the House office buildings.

It appears as though the known reserves of fossil fuels cannot supply us with enough energy to accommodate the needs of this Nation. The cost of these fuels have taken a dramatic leap in the past few years, and probably will continue to rise in the future. Because of this, we must pursue alternative sources of energy which are now available. Solar heating is one of the alternatives.

If the study proposed in this resolution reaches the conclusion that the installation of solar devices in any buildings of the House complex is a sound idea in terms of cost effectiveness, esthetics, and structural requirements, we should move forward. Also, we will realize at least a partial drop in the operating costs of the buildings that have been retrofitted. This will be a plus for the taxpayers.

Passage of this resolution will help indicate to the American people the commitment of Congress to solve the energy dilemma and contribute to the development of alternative sources of energy. We need to set an example.

I urge my colleagues to support the resolution.

Mr. MINETA. Mr. Speaker, I yield such time as he may consume to the distinguished chairman of the full committee, the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker, I rise in support of House Resolution 322. The study authorized by this legislation may be the beginning of what will eventually become a program where other than the existing forms of energy we now use will provide for our heating, cooling and hot water systems in the House Office Buildings complex.

This is an imaginative approach. I commend the Public Buildings and Grounds Subcommittee and its members and in particular, its chairman, the gentleman from California (Mr. MINETA) and its ranking minority member, the gentleman from New York (Mr. WALSH) for the time and effort they have spent on this resolution. Energy is indeed the cornerstone of our existence today and it is becoming more and more apparent that this is the case, and it is brought home to us rather vividly when we move to pass this resolution that will provide for the use of other energy sources in the buildings where we work.

I urge support of the resolution.

Mr. WALSH. Mr. Speaker, I yield such time as she may consume to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. Mr. Speaker, I thank my colleague, the gentleman from New York (Mr. WALSH), for yielding me this time.

I wonder if I could have the attention of the chairman of the committee and the ranking member. First of all, I would like to congratulate both of them on the job they have done. This is a great big forward step. It is important that the committee has undertaken it. I do not believe we can ask the people of this country to do something about solar energy if we are not prepared to involve ourselves with it here in the Nation's Capitol. I repeat, I believe both of these gentlemen are to be congratulated.

Mr. Speaker, I have only one question and that is with respect to the $50,000 authorized for the Architect of the Capitol. Would it not have been possible to do this without expense through the recommendations from ERDA, or one of the other Government agencies?

Mr. MINETA. Mr. Speaker, if the gentlewoman will yield, in terms of the Capitol Building itself, the jurisdiction is with the Building Commission and the Architect of the Capitol. Therefore, the Architect of the Capitol would be the appropriate person and the Building Commission is the appropriate body to have oversight in the overall response to this.

Mrs. FENWICK. Mr. Speaker, I am sorry, but I do not believe I put my question clearly.

My question is, Could not the Architect of the Capitol, instead of hiring outside people at a cost of $50,000, ask people from ERDA to come here and make recommendations and plans?

Mr. MINETA. In reply to the question asked by the gentlewoman from New Jersey, the Architect of the Capitol can consult with these agencies in contracting for those kinds of studies but I believe that the study would still be under the direct control of the Architect of the Capitol.

Mrs. FENWICK. Mr. Speaker, I must not be asking my question very clearly.

Why is any money necessary since we have governmental agencies concerned with exactly this kind of thing? Why do we have to pay money for this? Why cannot ERDA do it?

Mr. MINETA. Even if it were done by ERDA or FEA, it would still cost us money, and so the $50,000 would still be the appropriate sum to be authorized for this purpose.

Mr. WALSH. Mr. Speaker, will the gentlewoman yield?

Mrs. FENWICK. I am happy to yield to the gentleman from New York.

Mr. WALSH. Mr. Speaker, I would like to attempt to reply to the question asked by the gentlewoman from New Jersey (Mrs. FENWICK). I have been in the construction business, and I have found that any time you do anything unusual in construction you have to go out and get some expert to do it. I am not sure that the Architect of the Capitol has any expertise in the solar energy field, or has any experts on his staff. Further, the appropriation says "not in excess of $50,000" so it may not cost $50,000. He may very well find some expert in ERDA, or any other of the Government agencies and may not need the $50,000, but this is in conjunction with the contingency fund. If he does need it it is there.

Mrs. FENWICK. I thank the gentleman from New York.

Mr. ANDERSON of California. Mr. Speaker, I rise in strong support of House Resolution 322, a measure that authorizes the Architect of the Capitol to study the feasibility of using solar energy in connection with the heating, cooling, and hot water systems of the House office buildings.

I personally can see no better way of demonstrating the desire of the Congress to address the problem of increasing energy costs and dwindling supplies than to come to grips with the problem here where we work.

House Resolution 322 recognizes the fact that our country needs to establish an effective national conservation program. This bill endorses the fact that in the construction or renovation of buildings, the cost of energy consumed over the life of such construction of these buildings must be considered.

House Resolution 322 also reflects my strong belief that the Congress can and must find effective measures to reduce the rate of demand for energy, by implementing such conservation programs.

Currently the United States faces an energy shortage due to this ever-increasing demand for the insufficient domestic supplies. I would hope that this study will be a model for the remainder of the Government, and for private concerns, to begin their own programs of energy conservation.

We cannot rely on foreign imports to satisfy our energy demands. If the Congress is willing to demonstrate its intent in its own environment to conserve energy, then this experience and information gained can be transferred to the private sector thereby furthering our goal of developing and promoting alternative sources of energy such, as solar energy.

Mr. Speaker, I urge support for this measure and hope that we can soon follow it with more legislation to come to grips with this immediate and most important issue.

Mr. CLEVELAND. Mr. Speaker, as a cosponsor of House Resolution 322 I urge its passage by my colleagues. This bill would authorize a study of the feasibility and cost effectiveness of using solar energy in the office buildings used by Members of Congress and staff. The bill is not a research project and not a demonstration project. It is something we ought to do because it is both practical and in the national interest.

The use of solar energy for producing hot water in buildings and for heating and cooling buildings has been adopted in many places around the country in different types of buildings. The initiation of this study might well help lead the Nation in its search to solve our national energy problems.

With the new technology in this field of energy and as Members of Congress we ought to initiate this study. Congress has not been held in high regard by the people of this country, this offers a chance for us to set a good example. Our actions here, will carry more weight to the public and will begin to make a serious impact in the marketplace with solar energy for the good of the taxpayer and this Nation.

I, therefore, urge all Members to support the passage of House Resolution 322.

Mr. PICKLE. Mr. Speaker, I commend the chairman from California (Mr. MINETA) for moving this bill along quickly. I have just come from another full day's hearings in Ways and Means on the energy situation, and I think it is more than symbolic that the House of Representatives is acting on the measure before us now.

The Congress carries a heavy responsibility to help this country meet its energy needs. We can set many policies that will move the country along, but by stepping forward and actively exploring alternative energy sources ourselves we will do more for this country than the words of a thousand policies.

The bill before us is no pie in the sky proposal. The Sun is there and it is ready. The technology to use the Sun is here and it is ready. All that remains is for us to see if we can use it on our own buildings.

Many people have already worked with me on this bill. I thank the 77 cosponsors, particularly Mr. ROSE, Mr. OTTINGER, and Mr. MCCORMACK, who joined with me on this bill when we first conceived the idea several months ago. I also have a special thanks for George White, the Architect of the Capitol, who enthusiastically picked up on this idea when we brought it to him, and to the chief engineer, Mr.

Ray Carroll, who helped us with the technical aspects of the bill.

I also thank the other Members and staff members who have helped and encouraged this idea.

I hope you will approve the bill. I think it is good for the taxpayer, good for us in the House, and good for this Nation.

The bill proposes to spend a small amount of money to see if it would be feasible and cost effective to use solar energy in the office buildings used by the Members and staff of the House of Representatives.

House Resolution 322 gives priority to the House Office Building Annex No. 2, which is currently undergoing extensive renovations and which, with its flat roof, strong structure, and current heating and cooling systems, appears the most likely building for a total retrofit.

The study also would take a look at the Cannon, Longworth, and Rayburn buildings, where some of the subsystems may be convertible to solar energy, and at other House structures.

This bill does not say that we shall install solar energy equipment. We are not interested in foisting on this the American public some sort of fancy energy gimmick.

We propose something that will—if the study verifies our hunches—save the taxpayer money by taking advantage of an energy source that is free and is ready to be used.

If the study does not verify our hunches, then I will be the first to say, "Stop here."

It is easy to think of solar energy as a future energy source. But the future has a funny way of becoming the present—and this is especially true with some forms of solar energy.

Using solar energy for producing hot water in buildings and for heating and cooling buildings is here. It is in use already in places all around the country in many types of buildings.

As time goes on, this budding industry may get better at producing collectors, and they may get better at installing and maintaining them. But in this field we are not waiting for breakthroughs and new technology. The time is ripe and the technicians are already there and trained.

What we propose to this committee is not a research project. It is not a demonstration project. It is something which we ought to do because it is both practical and in the national interest.

As Members of Congress responsible for helping this country solve our national energy problems, it seems to me that we, as a body, ought to initiate this study and help lead the Nation in this search. Our actions here will carry far more weight than a wealth of speeches.

In seeking to retrofit an existing structure, as opposed to including solar energy in a new building, we are, in addition, making an important statement. It is growing more natural, when constructing a new building, to think in terms of solar or other energies. But it will take a very long time for solar energy to make much of an impact on our national energy needs if we use it only in new buildings. We need to think backward as well as forward and to retrofit buildings which are suitable. Only then will we begin to make a serious impact in the marketplace with solar energy.

If I may indulge the House with a personal experience—I went to a dedication recently of an 80-unit college dormitory in Austin, Tex., which is being converted to solar energy with an investment of about $130,000. In 30 days, they got the beams put up on the roof and the structures to hold the collectors. In 30 more days they are to have the collectors in and be producing 35 percent of the hot water, heating, and cooling needs of the building through solar energy. It made quite an impression on me and really brought home the fact that this technology is here, that it does not take forever to get it up and running, and that it can make a significant difference in fuel bills.

We currently spend about $600,000 for the energy needs of House Office Building Annex No. 2 every year. That building is going to be there a long, long time. If we can save 25 or 30 or 35 percent of this cost each year, it will add up.

Our fuel, no matter whether it is bought from the GSA or produced in our own steam powerplant, no matter whether it is coal or oil produced, is going to get more and more expensive. There is no escaping that fact.

Again, we are not proposing a research or a demonstration project. We are proposing that the House of Representatives do what it should do—provide energy for its structures in a manner least expensive to the taxpayer and most efficient for its need.

And let us remember the words found in Ecclesiastes (XI 7): *"Truly the light is sweet, and a pleasant thing it is for the eyes to behold the sun."*

I thank the House for its kind attention.

Mr. WALSH. Mr. Speaker, I have no further requests for time.

Mr. MINETA. I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. MINETA) that the House suspend the rules and agree to the resolution (H. Res. 322) as amended.

The question was taken.

Mr. WEISS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. MINETA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to revise and extend their remarks on the resolution just considered, House Resolution 322.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

THE COMMUNITY EMERGENCY DROUGHT RELIEF ACT OF 1977

Mr. JOHNSON of California. Mr. Speaker, I move to suspend the rules and pass the Senate bill (S. 1279) to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976–77 drought and promote water conservation.

The Clerk read as follows:

S. 1279

An act to provide temporary authorities to the Secretary of Commerce to facilitate emergency actions to mitigate the impacts of the 1976–77 drought and promote water conservation

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act be cited as the "Community Emergency Drought Relief Act of 1977".

SEC. 101. (a) Upon the application of any State, political subdivision of a State, Indian tribe, or public or private nonprofit organization, the Secretary of Commerce is authorized to make grants and loans to applicants in drought impacted areas for projects that implement short-term actions to augment community water supplies where there are severe problems due to water shortages. Such assistance may be for the improvement, expansion, or construction of water supplies, and purchase and transportation of water, which in the opinion of the Secretary of Commerce will make a substantial contribution to the relief of an existing or threatened drought condition in a designated area.

(b) The Secretary of Commerce may designate any area in the United States as an emergency drought impact area if he or she finds that major and continuing adverse drought condition exists and is expected to continue, and such condition is causing significant hardships on the affected areas.

(c) Eligible applicants shall be those States or political subdivisions of States with a population of ten thousand or more, Indian tribes, or public or private nonprofit organizations within areas designated pursuant to subsection (b) of this section.

(d) Projects assisted under this Act shall be only those with respect to which assurances can be given to the satisfaction of the Secretary of Commerce that the work can be completed by April 30, 1978, or within such extended time as the Secretary may approve in exceptional circumstances.

SEC. 102. Grants hereunder shall be in an amount not to exceed 50 per centum of allowable project costs. Loans shall be for a term not to exceed 40 years at a per annum interest rate of 5 per centum and shall be on such terms and conditions as the Secretary of Commerce shall determine. In determining the amount of a grant assistance for any project, the Secretary of Commerce may take into consideration such factors as are established by regulation and are consistent with the purposes of this Act.

SEC. 103. In extending assistance under this Act the Secretary shall take into consideration the relative needs of applicant areas for the projects for which assistance is requested, and the appropriateness of the project for relieving the conditions intended to be alleviated by this Act.

SEC. 104. The Secretary of Commerce shall have such powers and authorities under this Act as are vested in the Secretary by sections 701 and 708 of the Public Works and Economic Development Act of 1965, as amended, with respect to that Act.

SEC. 105. The National Environmental Protection Act of 1969, as amended, shall be implemented to the fullest extent consistent

with but subject to the time constraints imposed by this Act, and the Secretary of Commerce when making the final determination regarding an application for assistance hereunder shall given consideration to the environmental consequences determined within that period.

SEC. 106. (a) There is hereby authorized to be appropriated for the fiscal year ending September 30, 1977, $225,000,000 of which sum $150,000,000 is to be for the loan program herein, including administration thereof, and $75,000,000 of which is to be used for the grant program herein, including administration thereof, and such additional amounts for the fiscal year ending September 30, 1978, as may be reasonably needed for administrative expenses in monitoring and closing out the program authorized by the Act. Funds authorized by this Act shall be obligated by December 31, 1977.

(b) Funds available to the Secretary for this Act shall be available for expenditure for drought impact projects conducted heretofore by eligible applicants during fiscal year 1977 if such projects are found to be compatible with the broad purposes of this Act.

TITLE II

SEC. 201. The first sentence of section 201 (a) of the Public Works and Economic Development Act Amendments of 1976 (Public Law 94-487) is amended by striking out "one year" and inserting in lieu thereof "eighteen months".

SEC. 202. Section 202 of such Act is amended—

(a) by striking out "and" at the end of subsection (4);

(b) by striking out "chapter 57 and subchapter 53 of such title relating to classification and General Schedule pay rates" in subsection (5), and inserting in lieu thereof "chapter 51 and chapter 53 of such title";

(c) by striking out the period at the end of subsection (5), and inserting a semicolon in lieu thereof; and

(d) by adding at the end the following new subsections:

"(6) accept and use gifts or bequests of services, moneys and property; and

"(7) use appropriated funds and act as may be necessary and appropriate without regard to the provisions of section 551 of title 31, United States Code, section 34 of title 40, United States Code, and section 5 of title 41, United States Code.".

The SPEAKER pro tempore. Is a second demanded?

Mr. HAMMERSCHMIDT. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. JOHNSON) will be recognized for 20 minutes, and the gentleman from Arkansas (Mr. HAMMERSCHMIDT) will be recognized for 20 minutes.

The Chair recognizes the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, there is no need to detail how the shortage of rainfall and snowpack in the past 2 years have created extreme drought conditions in large areas of the West and Midwest. In my own district in northern California we have had 2 years of subnormal runoff and this will probably be the driest year since records have been kept.

Mr. Speaker, I am sure that Members are already aware that large areas of northern California are already rationing water and there is little question that some water for some users, particularly for irrigated agriculture, will be reduced so much this year that there will be serious economic impacts and increased unemployment in some areas of the West.

Mr. Speaker, because of this emergency we have asked that the rules be suspended so that we can call up S. 1279, the Community Emergency Drought Relief Act of 1977, for passage at this time.

This bill was sent to the Congress last month as part of President Carter's drought relief package and the President urged that the legislation be enacted as quickly as possible. One hundred seventy-five million dollars in appropriations for this bill is included in H.R. 4876, the Economic Stimulus Appropriation Act which was signed by the President last Friday. It is our understanding that the appropriation will cover $75 million in the grants and $100 million for the loans authorized in this bill.

Mr. Speaker, this bill authorizes $225 million in grant and loan authority to the Economic Development Administration for assistance to communities of 10,000 or more population for drought related water supply projects. The Federal assistance may be used for the improvement, expansion or construction of water supplies which in the opinion of the Secretary of Commerce will make a significant contribution to the relief of an existing or threatened drought condition.

Of the $225 million in new authority, $75 million is to be in the form of grants not to exceed 50 percent of project costs. Loan assistance in the amount of $150 million at 5 percent per annum for not more than 40 years makes up the greater portion of the Presidential request. Eligible applicants are States, political subdivisions of States, Indian tribes, or public or private nonprofit organizations. Similar assistance for communities less than 10,000 is to be provided by the Farmers Home Administration.

Mr. Speaker, this bill provides that funds must be obligated by December 31, 1977 and the projects completed by April 30, 1978. This is an extension of the time limits in the original bill which was introduced in the House as H.R. 5884. One other amendment added by the Senate to the original bill provides that funds shall be made available for drought impact projects undertaken by eligible applicants during fiscal year 1977 if the projects are compatible with the broad purpose of the act. It is my understanding that both of these amendments are acceptable to the administration and, in my opinion, significantly improve the bill.

Finally, a minor amendment to the bill requested by the administration has been added as title II. It would extend the time from 12 to 18 months from October 1976 within which a White House Conference on Balanced National Growth and Economic Development may be convened. Public Law 94-487, the extension of the Public Works and Economic Development Act of 1965, as amended, which we passed last year contained an authorization for this White House conference within 1 year of enactment of that act. The amendment further makes technical corrections in the earlier authorization relating to classification and salary requirements of staff.

Mr. Speaker, I urge a favorable vote on the passage of S. 1279.

GENERAL PROVISIONS OF S. 1279

The act authorizes grants or loans to applicants in drought-impacted areas to augment community water supplies.

Permissible activities include improvements or expansion of existing water supply facilities, construction of new ones, and well drilling or impoundment where appropriate.

Transportation of water by vehicle or pipeline is also permitted under this provision.

The purchase of water is also permissible if it is the most economical method of providing the needed supply.

Aid is available to alleviate existing conditions as well as threatened supplies.

Our knowledge of rainfall and water supply is such that future problems of supply can be anticipated with reasonable certainty.

It is appropriate under this legislation to fund projects in anticipation of these problems.

The Economic Development Administration should carefully review applications of this type to determine the seriousness of the problem and that the proposed project will address the expected need.

The threat of the shortage must be highly probable before approval of an application is justified.

ELIGIBLE APPLICANTS

Grants or loans under this program may be made to a State, Indian tribe, unit of local government with a population of 10,000 or more, or a public or private nonprofit organization.

Water districts would be eligible for funding under this provision.

The committee knows that several States have already launched drought assistance efforts, and have gained knowledge about the needs of their communities and experience in a drought assistance program.

Where feasible, EDA should cooperate with these State efforts and coordinate closely to maximize the effectiveness of the program.

ELIGIBLE AREAS

Eligibility is not limited to any specific State or region under this bill.

Any area of the country experiencing a significant shortage of water for normal uses would be eligible for assistance under this program.

The bill gives the Secretary of Commerce authority to designate areas eligible for assistance.

The committee does not consider this to be a time consuming, complex method of designation but a streamline process in keeping with the emergency nature of the program.

Many areas of the country have already been declared eligible for drought assistance by the President under the Disaster Relief Act of 1974, and by the Farmers Home Administration and the Small Business Administration.

It is the committee's intent that areas designated by other Federal agencies administering drought assistance programs would be recognized by the Department of Commerce as eligible areas.

This coordination of declaration authorities will expedite the program.

AVAILABLE ASSISTANCE

Projects may be funded either through grants or loans.

Grants made under the program would be limited to 50 percent of the cost of the project.

The local share of the project may be in a form approved by the Secretary if such arrangements will expedite the project.

The committee intends that a municipality or other eligible applicant may, under regulations prescribed by the Secretary, use in-kind services as its local contribution.

The other funding alternative is a loan to the applicant at 5 percent.

The terms of the loan shall be as determined by the Secretary.

It is the committee's intention that such terms shall expedite the completion of the project.

The Secretary may not approve a loan, however, with a repayment period of more than 40 years.

PROJECT PRIORITIES

The bill provides that the Secretary shall consider the relative needs of the applicants.

Those communities with the most severe problems should receive priority in funding of applications.

Priority should be extended to those communities where limited water supplies will create health problems and where mandatory or voluntary rationing has been implemented.

Threatened shortages with potential health impacts should also receive priority consideration by the Secretary.

The Secretary is provided with wide discretion under this program for making grants and loans.

Careful consideration should be given each request for priority assistance to determine the needs of the local area and the severity of the problem.

FUNDING

The measure authorizes $225 million for fiscal year 1977 of which $150 million is for loans and the remaining $75 million for grants.

One amendment was adopted by the committee to change the program deadlines.

As introduced, the bill requires that funds be obligated by September 30 and all projects completed by November 30 of this calendar year.

The committee amendment extended the deadline for obligation of the funds to December 31, 1977, and the completion date of the projects to the end of next fiscal year, September 30, 1978.

The extension of the deadlines will provide a more adequate opportunity for communities to plan and carry out needed projects.

While appropriations will be available soon, it will take time to implement a program of this magnitude.

Also, communities will need time to complete plans and file applications. New deadlines will give communities more flexibility in designing projects for their drought needs.

WHITE HOUSE CONFERENCE

Title II of the 3-year extension (Public Law 94-487) of the Public Works and Economic Development Act of 1965 enacted by the last Congress authorized the convening of a White House Conference on Balanced Growth and Economic Development.

This legislation extends the time allowed for convening the conference from 12 to 18 months after the date of enactment of Public Law 94-487 and makes other technical corrections in the earlier legislation relating to classification and salaries of staff.

The administration has requested these nonsubstantive modifications of the White House Conference.

The committee concurred that a new administration must be given adequate time to plan this important conference and granted the 6-month delay in the convening date.

Mr. HAMMERSCHMIDT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the community emergency drought relief program contained in S. 1279. This bill will provide financial assistance for community water supply systems in drought impacted areas. It is designed to provide short-term drought relief action and is one part of a more comprehensive drought assistance program, which was requested by the administration.

This legislation authorizes $150 million in loans which can be extended up to 40 years at an interest rate of 5 percent and $75 million in grants which can be used to cover up to 50 percent of the total eligible project cost. The program will be administered through the Economic Development Administration and will benefit communities with population of 10,000 or more. It is intended to compliment a similar program which will be operated through the Farmers Home Administration to provide like assistance for communities under 10,000 to rehabilitate their water supply systems.

The Secretary of Commerce may designate any area in the country as an emergency drought impact area if she finds that a major adverse drought condition exists. Any community receiving such a designation will be eligible for assistance under this program. The funds may be used to improve or expand existing water supplies, to construct new water facilities or to transport or buy water to meet a short-term emergency.

Many communities have already or soon will implement water rationing plans. This water shortage could cause adverse health problems for many sections of the country. This program is designed to provide financial assistance to these communities, as well as other related situations brought on by the drought.

I am concerned about the requirement that projects undertaken with these funds must be completed by April 30, 1978. I am not sure that this is a sufficient amount of time for local communities to complete a drought project, even one intended to be a short-term measure. With regard to this provision, I would encourage the Secretary to exercise flexibility in recognition of local situations. In addition, I think it is essential that the designation process be simple and swift. A blanket designation of all areas which have previously been declared eligible for disaster relief programs through FmHA, Small Business Administration, or like programs would seem reasonable and would expedite the implementation of this program.

We all recognize that the lack of rainfall and precipitation will have a severe effect on a large portion of the country and action is needed to bring assistance to these areas as quickly as possible. It is for this reason I support the measure before us today despite the fact that several provisions might have been improved, had we the luxury of additional time to examine this legislation.

A section-by-section analysis of S. 1279 follows:

SECTION-BY-SECTION ANALYSIS OF S. 1279 COMMUNITY EMERGENCY DROUGHT RELIEF ACT OF 1977

Section 101.—(a) Authorizes the Secretary of Commerce to make grants and loans to applicants in drought impacted areas for projects that implement short-term actions to increase community water supplies. Applicants may be States, local governments, Indian tribes, or public or private non-profit organizations. Grants may be for the improvement, expansion, or construction of water supplies and the purchase and transportation of water.

(b) Authorizes the Secretary of Commerce to designate any area in the United States as an emergency drought impact area if she finds that a major and continuing adverse drought condition exists and is expected to continue and is causing significant hardship on the area.

(c) Defines eligible applicants as States or political subdivisions of States with populations of 10,000 or more as well as Indian tribes or public and private non-profit organizations within designated areas.

(d) Requires certification that projects assisted under this Act will be completed by April 30, 1978. Authorizes the Secretary to extend this time in exceptional circumstances.

Section 102.—Authorizes grants up to 50% of the allowable cost and authorizes loans at a per annum interest rate of 5% for up to 40 years. Indicates that in determining the amount of the grants the Secretary may take into consideration such factors as established by regulation and consistent with the purpose of this Act.

Section 103.—Requires the Secretary to take into consideration the relative needs of applicant areas for the projects and the appropriateness of the project in relieving the drought condition.

Section 104.—Grants the Secretary power and authority to work cooperatively with other agencies and other duties as authorized in Section 701 and 708 of the Public Works and Economic Development Act of 1965, as amended.

Section 105.—Requires that the National Environmental Protection Act of 1969 be implemented to the fullest extent possible consistent with the time restraints imposed by this Act.

Section 106.—(a) Authorizes $225 million for FY 1977. $150 million is authorized for the loan program and $75 million for the grant program. Requires that funds authorized by this Act shall be obligated by December 31, 1977.

(b) Requires that funds shall be available for expenditure for drought projects begun during FY 1977 if projects are found to be compatible with the broad purposes of this Act.

TITLE II

Section 201.—Extends the time allowed for convening the White House Conference or Balanced Growth and Economic Development from 12 to 18 months. (The President was directed to hold such a conference in PL 94-487)

Section 202.—Makes certain technical corrections relating to classifications and salaries of staff.

Mr. Speaker, if I may, I would propound a question to the distinguished chairman as it pertains to a provincial matter in my own district, if I may have the attention of the chairman. It will not take more than a moment if the House will bear with me to make some legislative history.

Mr. Speaker, Scranton, Ark., a small community in Logan County, lost its water supply in August 1976, when the well went dry. The well currently supplying water for Scranton was considered temporary because of the unacceptable water quality. The present well is a danger to the community primarily because of high sodium concentration which severely affects those with a congestive cardiac failure, hypertension, renal disease, cirrhosis of the liver, and other ailments.

The State board of health would condemn the present well except that such action would leave the city without water for fire protection, sewage, and other domestic uses. The Board has continually advised against using this water for drinking purposes. Many citizens have been hauling water for drinking and cooking. However, the city water supply is still being used in the city schools and by those who cannot haul their own water.

Drilling a new water well would cost approximately $80,000. Treated surface water from the city of Paris or the city of Clarksville to be connected to Scranton would cost $650,000.

The bill before us today authorizes some $225 million for drought relief assistance for cities over 10,000. Farmers Home Administration will provide similar assistance to cities under 10,000. Since Scranton is in a county that is eligible for the Farmers Home Program, which is identical to this program being considered for authorization today, most assuredly this city should benefit from a loan or a grant to solve this drastic problem.

Could the distinguished chairman of our committee respond to this? I yield to the gentleman for that purpose.

Mr. JOHNSON of California. Mr. Speaker, with respect to the matter the gentleman from Arkansas speaks about there would be eligibility under this legislation.

Mr. HAMMERSCHMIDT. Mr. Speaker, I thank the gentleman from California (Mr. JOHNSON) very much.

Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Speaker, I want to express my strong support for this drought relief legislation before us.

Last month I introduced H.R. 6549, a bill which is almost identical to the drought relief proposal contained in S. 1279. The purpose of this legislation is to provide financial help for communities whose water supply system is jeopardized or threatened because of drought conditions. Due to the lack of rainfall, many water supply systems will run dry. Drinking water in many western parts of the country, including many communities in my own State, may pose possible health hazards, and vital community services may be limited without swift and decisive action to deal with these problems. It is these types of situations that the community emergency drought relief measure is intended to deal with.

It will provide funds to rehabilitate existing water systems, to build new facilities, to transport water or to purchase water if it is the most efficient means of dealing with the water shortage. This type of assistance is essential to towns and communities in impacted areas; $225 in loans and grants would be authorized to augment community water supplies in drought areas. These funds will be directed to communities having the most severe problems.

A similar program has been implemented through the Farmers Home Administration to provide assistance for smaller communities.

Passage of this legislation is necessary so that blanket drought relief coverage will be available to all commmunities, regardless of size. This proposal is aimed at providing assistance for short-term emergency drought-related projects. It is only one element of a broader based disaster relief program. Legislation, also considered on the floor today, to extend the disaster assistance program is another element in the package.

I am pleased that an amendment offered by Senator CRANSTON was added to this bill. This amendment stipulates that communities which had already undertaken emergency drought projects during the fiscal year will be eligible for assistance if the projects are compatible with the broad purposes of this act.

This is critical to areas of the country which had to initiate corrective projects prior to the passage of this bill. A number of communities have already implemented rationing plans and have commenced drought-related water projects. It is only right that these communities should not be penalized because of their desire to begin projects at once.

A comprehensive and flexible relief program is necessary to help speed the recovery of the many areas which have been adversely affected by the lack of rainfall.

In conclusion, I want to urge the Secretary of Commerce to quickly implement this program. The utmost coordination and cooperation are needed to insure designation obtained through other Federal disaster programs will be transferred to this program. The process for applying for assistance under this program should be simple and immediate.

Mr. McFALL. Mr. Speaker, this legislation, the Community Emergency Drought Relief Act, is urgently needed in California and throughout much of the West. The summer is fast approaching, and the time remaining for effective drought relief measures is rapidly eroding. I want to compliment the House for considering this bill in such a prompt manner.

In my own district, one community immediately comes to mind that could benefit from this legislation. The city of Tracy in San Joaquin County, Calif., already has plans ready to improve its water system. The current drought adds to the imperative need for Tracy's plans to move forward expeditiously.

Because of the drought, the mountain reservoirs are at the lowest levels I have ever seen them. As a result, many individuals, farmers, businesses and communities are drilling more and more wells. The underground water table is dropping, and this necessitates more new wells, especially deeper wells. With the continued dropping of the underground water table, some areas of the San Joaquin Valley become threatened with salt intrusion. This salinity is a danger not only to domestic water supplies, but also to agricultural land.

The city of Tracy recognizes that it cannot continue to indefinitely increase its reliance on new and deeper wells. Its plan calls for a 21,300-foot water transmission line to provide the city with a needed supplemental water supply from the Delta Mendota Canal operated by the Bureau of Reclamation. Construction of this project would allow Tracy to execute an existing contract with the Bureau of Reclamation for surface water from the canal.

A second element of Tracy's plan is the installation of a potable water treatment facility. This facility would enable the city to improve the quality of its waste water. The drought has dramatically demonstrated the need to achieve the best management and use of all our water resources, and the city of Tracy has wisely recognized that this means better management of waste water as well. This facility would enable Tracy to achieve that goal.

The total cost for both elements of Tracy's plan is nearly $5.3 million. The city is willing to provide about $300,000 if the Federal Government is able to provide the remaining $5 million. Tracy does have a pending application under the local public works program. However, if the city's application is not selected for funding, then the Community Emergency Drought Relief Act will provide a possible alternative for this necessary Federal aid.

Mr. Speaker, the city of Tracy is but one example of how the legislation now before us will enable California and other drought-stricken areas to effectively minimize the economic and social disruptions from severe water shortages. I urge favorable action by the House on this important measure.

Mr. HAMMERSCHMIDT. Mr. Speaker, I have no further requests for time.

Mr. JOHNSON of California. I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gen-

tleman from California (Mr. JOHNSON) that the House suspend the rules and pass the Senate bill S. 1279.

The question was taken.

Mr. ROUSSELOT. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

GENERAL LEAVE

Mr. JOHNSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the Senate bill just considered, S. 1279.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion on which further proceedings were postponed in the order in which that motion was entertained.

Votes will be taken in the following order:

H.R. 6138, H.R. 5742, H.R. 3722, H.R. 4746, H.R. 6752 (de novo), H.R. 5885 (de novo), H.R. 2501, H.R. 6010, H.R. 6197, H.R. 6401, H. Res. 332, and S. 1279.

Pursuant to the provisions of clause 3 (b) (3), rule XXVII, the Chair announces that after the first vote on these motions, he will reduce to a minimum of 5 minutes the period of time within which a vote by electronic device may be taken on all the additional motions to suspend the rules on which the Chair has postponed further proceedings.

YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATION PROJECTS ACT OF 1977

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill, H.R. 6138, as amended.

The Clerk read the title of the bill.

The SPEAKER. The question is on the motion offered by the gentleman from California (Mr. HAWKINS) that the House suspend the rules and pass the bill (H.R. 6138), as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 334, nays 61, not voting 37, as follows:

[Roll No. 240]

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON SENATE CONCURRENT RESOLUTION 19, FIRST CONCURRENT RESOLUTION ON THE BUDGET, FISCAL YEAR 1978

Mr. GIAIMO. Mr. Speaker, I call up the conference report on the Senate concurrent resolution (S. Con. Res. 19) setting forth the congressional budget for the U.S. Government for the fiscal year 1978 (and revising the congressional budget for fiscal year 1977), and ask for its immediate consideration.

The SPEAKER pro tempore. The Clerk will read the conference report.

The Clerk read the conference report.

(For conference report and statement, see proceedings of the House on May 11, 1977.)

The SPEAKER pro tempore. The Clerk will report the Senate amendment to the House amendment.

The Clerk read the Senate amendment to the House amendment as follows:

In lieu of the matter proposed to be inserted by the House engrossed amendment, insert:

That the Congress hereby determines and declares, pursuant to section 301(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $396,300,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $17,600,000,000;

(2) the appropriate level of total new budget authority is $503,450,000,000;

(3) the appropriate level of total budget outlays is $460,950,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $64,650,000,000; and

(5) the appropriate level of the public debt is $784,900,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $83,600,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 301(a)(2) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $9,300,000,000;000,000;
(B) Outlays, $111,000,000,000.
(2) International Affairs (150):
(A) New budget authority, $9,300,000,000.
(B) Outlays, $7,300,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,900,000,000;
(B) Outlays, $4,700,000,000.
(4) Natural Resources, Environment, and Energy ($300):
(A) New budget authority, $20,700,000,000;
(B) Outlays, $20,000,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,200,000,000;
(B) Outlays, $4,350,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $20,000,000,000;
(B) Outlays, $19,400,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $8,200,000,000;
(B) Outlays, $10,800,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $26,800,000,000;
(B) Outlays, $27,200,000,000.
(9) Health (550):
(A) New budget authority, $47,900,000,000;
(B) Outlays, $44,300,000,000.
(10) Income Security (600):
(A) New budget authority, $179,900,000,000;
(B) Outlays, $146,700,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $20,250,000,000;
(B) Outlays, $20,200,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,700,000,000;
(B) Outlays, $3,850,000,000.
(13) General Government (800):
(A) New budget authority, $3,800,000,000;
(B) Outlays, $3,850,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $9,800,000,000;
(B) Outlays, $9,700,000,000.
(15) Interest (900):
(A) New budget authority, $43,000,000,000;
(B) Outlays, $43,000,000,000.
(16) Allowances:
(A) New budget authority, $800,000,000;
(B) Outlays, $900,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$16,300,000,000;
(B) Outlays, —$16,300,000,000.

SEC. 3. In the Third Budget Resolution for fiscal year 1977, the Congress provided for revenue and spending proposals designed to stimulate the Nation's economy in order to reduce unemployment. These proposals, together with recent indications of more vigorous economic growth in the private sector, provide evidence that the Nation's economy may be returning to the levels needed to provide jobs to millions of our unemployed.

The Congress recognizes, however, that unusual uncertainties surround the current economic outlook for 1977 and 1978—primarily, the economic impact of the stimulus proposals and the likehood of continued economic growth in the private sector—and that additional time and information are needed to make final determinations with respect to fiscal policy for fiscal year 1978; and declares that, if economic recovery does not proceed satisfactorily during the months immediately following adoption of the First Budget Resolution for Fiscal Year 1978, it will be necessary to provide additional stimulus to the economy in appropriate amounts to be determined in the

Second Budget Resolution for Fiscal Year 1978. On the other hand, if the recovery continues to show signs of long-term renewed growth, it may be desirable to reduce some of the economic stimulus provided for fiscal year 1978 in order to make more rapid progress toward a balanced budget.

SEC. 4. (a) Pursuant to section 304 of the Congressional Budget Act of 1974, the appropriate aggregate amounts for the fiscal year 1977 set forth in the first section of S. Con. Res. 10 are revised as follows:

(1) the recommended level of Federal revenues is $356,600,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $2,600,000,000;

(2) the appropriate level of total new budget authority is $470,200,000,000;

(3) the appropriate level of total budget outlays is $409,200,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $52,600,000,000; and

(5) the appropriate level of the public debt is $701,300,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $1,300,000,000.

(b) Pursuant to section 304 of the Congressional Budget Act of 1974, the allocations for the fiscal year 1977 made in section 2 of S. Con. Res. 10 are revised so that the appropriate levels of new budget authority and the estimated budget outlays for the various functional categories are as follows:

(1) National Defense (050):
(A) New budget authority, $108,800,000,000;
(B) Outlays, $98,900,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,900,000,000;
(B) Outlays, $6,500,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,500,000,000;
(B) Outlays, $4,600,000,000.
(4) Natural Resources, Environment, and Energy (300):

Mr. GIAIMO (during the reading). Mr. Speaker, I ask unanimous consent that the Senate amendment to the House amendment be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

MOTION OFFERED BY MR. GIAIMO

Mr. GIAIMO. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. GIAIMO moves to concur in the Senate amendment to the House amendment.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Connecticut (Mr. GIAIMO) for 1 hour.

GENERAL LEAVE

Mr. GIAIMO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to insert extraneous matter, on Senate Concurrent Resolution 19.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. GIAIMO. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) for purposes of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, I rise in strong support of the conference report on the first budget resolution for fiscal year 1978. I believe it is a reasonable and realistic compromise between the House and Senate, a compromise that is supported by 11 of our 13 House conferees.

Its adoption today will clear the way for the House's consideration of all spending bills for the coming fiscal year. As Members know, under the budget act, no appropriation or entitlement bill may be considered prior to adoption of this first resolution.

I want to stress also that this resolution proposes only targets and not ceilings of any kind. Spending ceilings and a revenue floor will be set later this year in the second budget resolution for fiscal year 1978. Until then, the targets being set today will guide and influence, but not bind, our action on appropriations and other spending bills.

Mr. Speaker, in one respect this conference between the House and Senate on this resolution was the most difficult we have had under the new budget process. The reason, of course, was the sharply differing views of the two Houses on defense spending for fiscal year 1978.

As Members know, the original budget committee recommendation called for new budget authority of $116 billion for national defense, $4.1 billion below the level recommended by the President. Subsequently, after a series of amendments proposing higher levels were rejected, the House adopted its resolution with an increase in budget authority to $117.1 billion. The Senate, on the other hand, adopted a resolution providing for $120.3 billion, slightly more than the President's recommendation.

In conference, Members from both Houses argued vigorously that any substantial deviation from their House's figures would result in rejection of the resolution. This issue was discussed at great length and completely dominated the conference.

Finally, after a series of offers were made and rejected, the conferees agreed on a budget authority target of $118.5 billion and an outlay target of $111.0 billion. These targets are slightly closer to the House position on budget authority—about $1.4 billion above the House target and $1.8 billion below the Senate target; and slightly closer to the Senate position on outlays—about $1.1 billion above the House target and $700 million below the Senate target.

Together with this agreement on the defense targets, the conferees included language in the statement of managers accompanying the conference report as follows:

This substitute assumes that financial adjustments can be made to the administration's budget request in order to remain within these targets. Such adjustments may include a possible slowdown in projected foreign military sales, the utilization of prior-year unobligated funds to finance a portion of the FY 1978 program, a lower inflation rate from that now assumed in the administration's budget, and a partial absorption of the October pay raise.

Mr. Speaker, I believe that this agreement on the defense targets is the best attainable in view of the adamant position of the other body. In fact, neither the House nor the Senate is getting precisely what it desires in this respect. However, as far as the conferees were concerned, the need to reach some agreement, in the interest of obtaining adoption of this conference report in both Houses, was paramount. I am certain that I speak for all of the House conferees in this respect: the targets we bring back to the House are the only realistic ones if we are to have a first budget resolution for fiscal year 1978.

I would like to summarize, at this point, the major decisions reached by the conferees with respect to the fiscal year 1978 revenue and spending targets.

First, the major budget aggregates agreed to are as follows:

Outlays—$460.95 billion, about $3.5 billion below the House resolution;

Revenues—$396.3 billion, about $1.8 billion below the House resolution; and

Deficit—$64.65 billion, about $1.7 billion below the House resolution.

The reduced deficit is due to the reduction of outlays by $3.5 billion, combined with lower revenues of $1.8 billion. These changes are due primarily to lower outlay estimates for such activities as EPA and highway construction and export-import bank lending, and on the revenue side, conformance to the tax bill agreed to recently by the Ways and Means and Finance Committee conferees.

The $64.65 billion deficit projected in the conference report remains nearly $7 billion above that projected by the President. However, about three-fourths of that amount is accounted for by different economic assumptions and pro-

gram estimates than used by the administration.

I would emphasize to Members that the $3.5 billion reduction in outlays from the House resolution is due, in large part, to lower spending estimates. For example, in the natural resources function, the nearly $700 million decreases in outlays from the House resolution is due primarily to a recent lower estimate of spending in the EPA construction grant program; in the commerce and transportation function, the nearly $900 million decrease in outlays from the House resolution reflects primarily a lagging rate of obligations in fiscal year 1977 from the highway trust fund; and in the education, training, and social services function, the nearly $600 million decrease in outlays from the House resolution reflects primarily a continuing short-fall in education spending and delays in authorization and appropriations for the economic stimulus proposals contained in the third budget resolution for fiscal year 1977.

At the same time, it should be noted that the conferees accepted the Senate resolution's forward funding of the public service employment program for fiscal year 1979, provided in the conference report to assure States and cities that the program will continue in fiscal year 1979 is $3.8 billion. The precise program level, of course, will be determined during the fiscal year budget process.

I will turn at this point to the conferees' decisions with respect to fiscal year 1977.

As Members know, both the House and Senate resolutions had revised the third budget resolution for fiscal year 1977—the House by eliminating the provision for the $50 rebates and special payments to individuals, the Senate by reducing spending estimates due to shortfalls during the first half of fiscal year 1977. The conferees adopted the House position to eliminate the rebates and special payments and the Senate position, with minor adjustments, to reflect for spending shortfalls.

The conferees' actions on fiscal year 1977 produce the following budget aggregates:

Outlays of $409.2 billion, $8.25 billion below the third budget resolution;

Revenues of $356.6 billion, $8.9 billion above the third resolution; and

Deficit of $52.6 billion, $17.15 billion below the third resolution.

I want to remind Members that our revision of the third budget resolution sets a new revenue floor—$356.6 billion—and new spending ceilings—$470.2 billion in budget authority and $409.2 billion in outlays. After adoption of this conference report, any legislation which would reduce revenues below the floor or increase spending above the ceilings would be subject to a point of order.

Mr. MITCHELL of Maryland. Mr. Speaker, will my distinguished chairman yield to me?

Mr. GIAIMO. I would be delighted to yield to the gentleman from Maryland, whom I consider to be one of the outstanding Members of this body and certainly one of the outstanding members of the Budget Committee. It is a pleasure to yield to him.

Mr. MITCHELL of Maryland. I thank the gentleman for his kind words. Unfortunately, I still have to put the question to my distinguished chairman. I just want to make sure I understand what has transpired and that it is clear in my mind.

We came out with a compromise which added another billion dollars or so for the Defense function.

Mr. GIAIMO. We went up.

Mr. MITCHELL of Maryland. Right. Then in conference another $1.4 billion was accepted; is that correct?

Mr. GIAIMO. Yes. It went from $117.1 billion up to $118.5 billion.

Mr. MITCHELL of Maryland. So in effect we have moved $2.4 billion above our original position.

Mr. GIAIMO. From the original resolution, that is right.

Mr. MITCHELL of Maryland. All right. It is my further understanding that the conferees accepted the Senate's position on some domestic programs, something in manpower and some other area.

Mr. GIAIMO. Yes. We accepted those reductions—$3.5 billion—most of which are estimating differences, because of the fact that the Senate had the benefit of the later April reestimates by OMB.

Mr. MITCHELL of Maryland. If my distinguished chairman would just let me put two more questions to him on the domestic program, the manpower program, are they not forward funded so that the bulk of the impact would occur in 1979 perhaps?

Mr. GIAIMO. Yes, there is forward funding.

Mr. MITCHELL of Maryland. But the money that is added onto the military is not any forward funding; that is to be spent in fiscal year 1978; is that correct?

Mr. GIAIMO. That is true, but remember that in both instances we are talking about budget authority, not outlays.

Mr. MITCHELL of Maryland. Yes, I understand that. I thank the chairman—who has instructed me how to vote on this.

Ms. HOLTZMAN. Mr. Speaker, will the gentleman yield?

Mr. GIAIMO. I am delighted to yield to another very distinguished member of the committee, the gentlewoman from New York (Ms. HOLTZMAN).

Ms. HOLTZMAN. I thank the Chairman for yielding.

I would say to the Chairman that I have enormous respect for him, and I know how diligently, how carefully and how hard he has worked to preserve the budget process and to bring back to the House a conference report that we can support.

I would say to the gentleman that because of my enormous respect for his abilities, his concern and his dedication I would have liked to have been able to support this conference report. But the conference report does not address our country's real needs and the priorities we ought to set for Federal spending in order to meet those needs. We are deluding the people of this country when we spend so much money on the military unnecessarily and wastefully. We are serving them badly by shortchanging them on domestic needs. I wish that the circumstances had been different and the conference report had offered serious promise of remedying America's pressing domestic problems, such as rebuilding our cities, providing people with jobs, and insuring quality education for all Americans.

I thank the gentleman.

Mr. GIAIMO. I thank the gentlewoman for her comments.

Mr. THOMPSON. Mr. Speaker, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from New Jersey.

Mr. THOMPSON. First, I should like to commend my distinguished colleague and very dear friend, the gentleman from Connecticut (Mr. GIAIMO) for the really remarkable job that he and the members of his committee have done.

Mr. Speaker, I rise in support of the conference report on the first budget resolution for fiscal year 1978.

It would be impossible for any conference report on the budget—particularly the first target resolution—to make many Members completely satisfied with its contents. All of us would like it to contain target levels that are higher for those programs in which we, or our districts, are most concerned. At the same time, each of us would prefer that spending targets for programs that we think are wasteful or ill-advised could be lower than contained in the report. In a legislative exercise that is as complex as the congressional budget process, it is inevitable that this would be the case.

While this points out the extreme complexity of the budget process, it also highlights the absolute need for the House to approve this conference report. This process gives us a workable mechanism by which to resolve these difficult types of problems that involve spending priorities and to balance one basic priority with another in a rational way.

For myself, Mr. Speaker, I would have hoped that the target spending figure for national defense could have been lower and that additional funds could have been earmarked for education, job training, assistance for the elderly, and for similar types of "people programs" that I have fought to establish and expand. Yet I know the difficult nature of the conference meetings with the other body and the 3-day struggle over the defense function target and am convinced that the House conferees, led by the able chairman of the Budget Committee, the gentleman from Connecticut (Mr. GIAIMO), did the very best they could to hold the line. This is not a pledge to vote for the defense appropriation, but to support the conference. In fact, the budget authority provided in the conference report for defense spending for fiscal 1978 is closer to the House-passed figure than that passed by the other body.

Although it is not perfect, this compromise deserves our support. It is a target only and will be changed in the fall and I urge all Members to vote for it.

It is essential that we adopt this conference report without further delay.

Mr. GIAIMO. Mr. Speaker, I thank the gentleman from New Jersey.

Mr. Speaker, I urge all Members to support this conference report. It is a re-

sponsible compromise between the House and Senate.

As I stated earlier, this is particularly true with respect to the defense spending target. The conference might well have ended in deadlock if both sides had not put the interests of the budget process ahead of a difference, at one time, of less than one-half of 1 percent of the defense function. The amounts finally agreed upon, while not perfectly acceptable to all, deserve the support of the overwhelming majority in both bodies.

Finally, I want to thank Members on both sides who worked so hard in conference to bring back this compromise. There has been a good deal of loose talk in recent weeks that the budget process was floundering, that Members were no longer willing to live even with self-imposed disciplines. The cooperation we have had throughout the House in developing this compromise resolution demonstrates that such talk is unwarranted.

I believe the broad majority remain committed to the new process, despite their disagreement with one or another individual decision. I urge you to support this conference report as a further indication of that commitment.

Mr. Speaker, I include in the RECORD two attachments further explaining the conference report:

ATTACHMENT A: DIFFERENCE BETWEEN PRESIDENT'S REVENUE ESTIMATE AND REVENUE CONTAINED IN FIRST BUDGET RESOLUTION FOR FISCAL YEAR 1978, IN MILLIONS OF DOLLARS

(1) President's April revenue estimate: $404,700.

(a) Rejection of a portion of the April estimate as inconsistent with President's economic assumptions: $1,200.

(b) Conformance to Conference Report on H.R. 3477, the Tax Reduction and Simplification Act of 1977 (tax cuts of $17,751 million, rather than $13,800 million as proposed by the President): $3,951.

(c) Congressional Assumptions on Miscellaneous Tax Proposals: +$228.

No delay in increase in SMI premiums: (+$182).

Delay in enacting social security tax on tips: (−$52).

Delay in enacting municipal bond option: (−$7).

Delay in enacting new fees for waterway users: (−$80).

Allowance for adoption of miscellaneous tariff and other bills: (−$65).

New taxes relating to coal mine operators or per ton for strip mine rehabilitation: (+$250).

(d) Treatment of Earned Income Credit: −$1,000.

(e) Congressional Assumptions on Economic Growth (lower than President's assumptions): $2,500.

(2) Revenue Estimate—First Budget Resolution for FY 1978: $396,277.

ATTACHMENT B: EXPLANATION OF FUNCTIONAL CATEGORY AMOUNTS IN THE FIRST BUDGET RESOLUTION FOR FISCAL YEAR 1978

050: NATIONAL DEFENSE

The conference report provides $118.5 billion in budget authority and $111.0 billion in outlays for National Defense. These amounts are $1.4 billion in budget authority above the House resolution and $1.8 billion below the Senate resolution. Outlays are $1.1 billion above the House and $600 million below the Senate resolution.

The conference report includes language which identifies the areas which the House report indicated could be reduced. The language calls for reductions in foreign sales, prior-year balances, inflation estimates, and personnel compensation. The conference report language does not require reductions in the same amounts as the House resolution report specified, but addresses the same general areas.

150: INTERNATIONAL AFFAIRS

The conference report provides $9.3 billion in budget authority and $7.3 billion in outlays for International Affairs, a reduction of $243 million in budget authority and $97 million in outlays from the House resolution. This reduction results from acceptance of lower estimates of spending in Export-Import Bank activities in FY 1978 and does not effect other House assumptions concerning this function.

250: GENERAL SCIENCE, SPACE, AND TECHNOLOGY

The conference report provides budget authority of $4.9 billion and outlays of $4.7 billion for General Science, Space, and Technology. These amounts are substantially the same as in the House resolution.

300: NATURAL RESOURCES, ENVIRONMENT AND ENERGY

The conference report provides budget authority of $20.7 billion and outlays of $20.0 billion for Natural Resources, Environment, and Energy, $250 million in budget authority and $667 million in outlays below the House resolution. The outlay reduction is attributed primarily to a lower estimate of outlays from prior-year budget authority in the EPA construction grant program. The House resolution had assumed the level of outlays reflected in the President's February budget; however, the conferees receded to the Senate position which was based on a lower estimate recently provided by the CBO.

350: AGRICULTURE

The conference report provides budget authority of $2.2 billion and outlays of $4.35 billion for Agriculture, essentially the same as in the House resolution. These levels reflect recent Administration estimates for the Commodity Credit Corporation, additional capital stock for the Federal Crop Insurance Corporation, and increased spending for agriculture research, grain inspection amendment, Foreign agriculture service market development, and regulatory services personnel.

New farm legislation for 1978 crops is expected to affect fiscal year 1978 budget authority and outlays only minimally. The totals for this function assume $410 million of new entitlement authority for the fiscal year 1978 impact of the new farm bill; no funding is assumed for legislative changes affecting 1977 crops.

400: COMMERCE AND TRANSPORTATION

The conference report provides budget authority of $20.0 billion and outlays of $19.4 billion for Commerce and Transportation. The reductions from budget authority provided in the House resolution recognize that authorizing legislation for many of the proposed new initiatives in transportation programs are being subjected to intensive study, particularly in light of the Administration's energy proposals. The provision in the House resolution for a substantial increase in appropriations for Small Business Administration programs was retained. The outlay reduction recognizes that obligations in the Federal highway trust fund have not been proceeding as rapidly as planned during the current fiscal year. A substantial increase in the rate of obligation—should it occur later this year—could be accommodated in a re-estimate of fiscal year 1978 outlays in connection with the Second Budget Resolution.

450: COMMUNITY AND REGIONAL DEVELOPMENT

The conference report provides budget authority of $8.2 billion and outlays of $10.8 billion for Community and Regional Development. These amounts represent rounding off of budget authority and a reduction in outlays from the House resolution to reflect delays in enactment of the Economic Stimulus Appropriation Act.

500: EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

The conference report provides budget authority of $26.8 billion and outlays of $27.2 billion for Education, Training, Employment, and Social Services, an increase of $4.061 billion in budget authority and a decrease of $556 million in outlays.

The budget authority increase includes $3.8 billion for forward funding of public service employment in FY 1979, and $261 million for education. The outlay decrease results from the continuing shortfall in education outlays, delays in authorization of and appropriations for FY 1977 economic stimulus programs, and the exclusion of funds for the Job Opportunities Program in the FY 1977 stimulus appropriations bill.

550: HEALTH

The conference report provides budget authority of $47.9 billion and outlays of $44.3 billion for Health. These amounts represent increases of $215 million in budget authority and $62 million in outlays above the House resolution.

The report provides for the following:

(1) For the Medicare program, budget authority is included at $28,375 million and outlays of $26,184 million. The outlay total includes savings of $620 million from legislation to control hospital costs and an additional $26 million for miscellaneous program improvements.

(2) For the Medicaid program, budget authority and outlays are included at $11,540 million. The totals for the program include savings of $106 million in budget authority and outlays from legislation to control hospital costs. The totals also include budget authority and outlays of $177 million for legislation to establish an improved child health assessment program and other miscellaneous legislative initiatives.

(3) For all health programs other than Medicare and Medicaid, budget authority of $8.0 billion and outlays of $7.6 billion.

600: INCOME SECURITY

The conference report reduced budget authority by $2.788 billion and outlays by $1.609 billion due to the following:

Earned Income Credit—Budget authority and outlays are reduced by $969 million as a result of the decision to treat this program as a revenue loss in this resolution, but to address the accounting treatment of this program *de novo* in the Second Budget Resolution for fiscal year 1978.

New Legislation—The report reflects the savings assumed in the House resolution as a result of enactment of a standard deduction for work expenses in the Aid to Families with Dependent Children (AFDC) program ($−50 million in budget authority and outlays) and reforms to the Social Security program ($−777 million in outlays). These reforms were proposed in the Administration's budget and the savings were included in the March 15 report of the Committee on Ways and Means. The conference report assumes the benefit changes contemplated in the House resolution for Federal employee retirement ($10 million in budget authority and $7 million in outlays) and the cash assistance programs ($198 million in budget authority and outlays for the Aid to Families with Dependent Children and Supplemental Security Income programs.) The report also assumes $200 million in budget authority and $137 million in outlays for legislation to liberalize the Special Benefits for Disabled Coal Miners program and to finance most new claims through a trust fund financed by assessments on coal mine operators. The net impact of the conference report is to increase budget authority by $8 million and

outlays by $37 million over the House resolution.

Reestimates—The conference report reduces the estimates in the House resolution by $1,829 million in budget authority and $677 million in outlays as a result of the following:

Unemployment Compensation—The net impact of enactment of Federal Supplemental Benefits extension at a lower cost than was assumed in the House resolution, a shift in accounting treatment for budget authority, and a reestimate of current policy outlays to reflect the lower-than-projected unemployment rate in April is to reduce budget authority by $1,631 million and outlays by $565 million.

Aid to Families with Dependent Children—A current policy reestimate reduces budget authority and outlays by $100 million.

Other—Reestimates in the Child Nutrition and Railroad Retirement programs account for the remaining differences from the House resolution.

The following table lists the estimates by program included in the conference agreement for this function:

FUNCTION 600: INCOME SECURITY

[In millions of dollars]

	President's budget request, fiscal year 1978		House passed, fiscal year 1978		First resolution, fiscal year 1978 conference agreement		Conference agreement over (+) under (−) House passed

Rounded					179,900	146,700		

[1] Administrative costs transfer between these accounts.

Note: Totals may not add due to rounding.

700: VETERANS BENEFITS AND SERVICES

The conference report provides budget authority of $20.25 billion and outlays of $20.2 billion for Veterans Benefits and Services, an increase of $15 million in budget authority and a decrease of $3 million in outlays from the House resolution.

750: LAW ENFORCEMENT AND JUSTICE

The conference report provides budget authority of $3.8 billion and outlays of $3.85 billion for Law Enforcement and Justice, essentially the same as the amounts in the House resolution.

800: GENERAL GOVERNMENT

The conference report provides budget authority of $3.7 billion and outlays of $3.85 billion for General Government. The reductions from the House resolution recognize that certain funding needs anticipated for fiscal year 1978 have been accommodated in the FY 1977 Supplemental Appropriations Act.

850: REVENUE SHARING AND GENERAL PURPOSE FISCAL ASSISTANCE

There were only minor estimating differences between the two bodies with respect to the Revenue Sharing functional category, which also includes estimates of certain revenues returned to states, territories, and local governments. The conference report provides budget authority of $9.8 billion and outlays of $9.7 billion for Revenue Sharing and General Purpose Fiscal Assistance, essentially the same as the amounts in the House resolution.

900: INTEREST

The conference report provides budget authority and outlays of $43 billion for Interest, the same amounts as in the House resolution. Short-term interest rates are expected to average 5.2 percent during fiscal year 1978.

920: ALLOWANCES

The conference report provides budget authority of $800 million and outlays of $900 million for Allowances. The reductions from the House resolution recognize that actual appropriations for supplemental pay raise costs for employees of non-defense Executive branch agencies are traditionally considerably lower than initially estimated. The conference report assumes a 15 percent absorption of pay costs, as estimated by the Executive Branch.

950: UNDISTRIBUTED OFFSETTING RECEIPTS

The conference report provides budget authority and outlays of −$16.3 billion for Undistributed Offsetting Receipts. This functional category includes the offsets to outlays that result from rentals and royalties on the Outer Continental Shelf as well as two other items that represent transactions within the budget that would otherwise result in double-counting of outlays. The functional totals of −$16.3 billion in budget authority and outlays include an estimated $1.9 billion from the Outer Continental Shelf, recognizing that current Administration policy has delayed several sales of tract production rights that had been scheduled earlier.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Ohio (Mr. LATTA).

Mr. LATTA. Mr. Speaker, I yield 5 minutes to the gentlewoman from Maryland (Mrs. HOLT).

Mrs. HOLT. Mr. Speaker, as we went through this long and difficult struggle on this budget resolution for fiscal year 1978, we had many problems. The minority Members have had two dominant, critical concerns. One is that America and the free world have got to respond to the challenge of the Soviet military buildup that has been going on for more than 10 years while we have allowed our defensive strength to erode. The danger of this trend is evident to practically everybody, including the President and all of the committees that have dealt with it and the Secretary of Defense. The time left for us to make a change in that trend is fast disappearing.

The second point of concern was the future economic health of our Nation. That absolutely requires that we restrain the growth of Federal spending and reduce the huge deficits that threaten to destroy our economy with inflation. The explosive growth of

spending has got to be brought under control.

I know that many Members of the majority share those concerns.

The budget document that was passed by the House and the Senate, this compromise version reported by the conference committee, is a wildly inflationary one. I suffer with that. Instead of moving toward President Carter's goal of a balanced Federal budget by fiscal 1981, the Congress is receding from it. I do not endorse this mad rate of spending.

When the House debated its budget resolution, the minority Members offered a substitute that would have cut spending substantially, allowed a 10-percent cut in tax rates, and reduced the deficit to $45 billion. We were proud of that effort. The effect would have been less inflation and a healthy durable economic growth in the productive sector of our economy. But that substitute was defeated.

Now all the votes on this first resolution are concluded except for one. The chance for amendments are gone. The conference negotiations are finished.

We fought a good fight and we have managed to save the defense budget from disastrous cuts. In fact, the conference report on the defense function allows for some desperately needed growth in our military strength and preparedness.

Mr. Speaker, I know that many minority Members of the House are appalled at the idea of voting for a budget with a $65 billion deficit caused by the enormous growth of social spending in the past decade. We did our best to prevent it. We can do no more in this particular round, but we will surely continue the fight another day.

I know that my colleagues on this side of the aisle are not impressed at all, but the deficit in the conference report is $2.3 billion lower than the House-passed deficit. The conference also reduced the fiscal 1977 deficit by nearly $7 billion.

Now, the day that I signed that conference report, I would have dearly loved to have said "no" and indulged the luxury of running into my ivory tower and turning my back on that ugly deficit—nothing in the world would have made me happier; but I refuse to stand idly by and permit a small minority of this body to order our national priorities. I am not going to do that. I think that is the wrong way to go. We have got to get involved in it, so now let us concern ourselves with protecting what we have won, that is a defense budget which allows for adequate military outlays in the next fiscal year. As we all know from the recent debate in the Budget Committee and on the House floor, the condition of the defense function could have been much worse at this stage of the proceedings.

The House Budget Committee originally proposed cutting $4.1 billion from defense budget authority and $2.3 billion from the outlays proposed by President Carter. Through the determined efforts of our friends on the majority side, the conferees from the other body, we have managed to restore $2.5 billion to defense budget authority and $1.4 billion to outlays.

The SPEAKER pro tempore. The time of the gentlewoman from Maryland has expired.

Mr. LATTA. Mr. Speaker, I yield 2 additional minutes to the gentlewoman from Maryland.

Mrs. HOLT. Mr. Speaker, so I feel that we have made progress. Given the historical record of declining defense effort over the past decade, this may not seem like enough; but I am suggesting that the growth in defense effort allowed by this budget is respectable and would continue the real growth by this year's budget after years of losing ground.

Mr. Speaker, I think the budget process is in real trouble. We have got to find ways to avoid getting into line items and usurping the jurisdictions of legislative and appropriating committees; but at this point in its development if the Republicans do not take an active part in shaping this target budget, I think we are sorely failing in our responsibility.

Mr. KEMP. Mr. Speaker, will the gentlewoman yield?

Mrs. HOLT. I yield to the gentleman from New York.

Mr. KEMP. Mr. Speaker, I thank the gentlelady from Maryland for yielding, but five times in this Congress the majority has turned down our attempts to reduce taxes and to help the American taxpayer to increase his after-tax income. Five times we have tried to increase incentives for all Americans to work, save, and invest. The gentlewoman has been an active participant in this effort. The budget process has accommodated the $12 extra billion for the President's economic stimulus package, it has accommodated the billions extra for CETA jobs program, it accommodates all the extra spending except when it comes to enacting our tax reduction because, we are told, it is not in the budget. Well I am not impressed. That is the reason I will oppose this budget resolution. This budget, we are told, cannot accommodate tax relief for the taxpayers of America, to help inflation-proof their earnings and increase the reward for their work and investment, but it does accommodate $63 billion of deficit financing which will be paid for out of the pockets and earnings of the American people.

Mr. Speaker, we are strangling the spirit of enterprise in America and the incentives and hopes of Americans by the tremendous tax burden being carried by the people.

Mrs. HOLT. Mr. Speaker, I think I understand that. That is absolutely right. The gentleman knows that I have supported his very successful efforts to bring the story of a sound economy to the people of this country. I applaud and approve the gentleman's statement. I support it totally. I think the gentleman is absolutely right.

The SPEAKER pro tempore. The time of the gentlewoman from Maryland has again expired.

Mr. LATTA. Mr. Speaker, I yield 1 additional minute to the gentlewoman from Maryland.

Mrs. HOLT. But I think this is the time when we are trying to make the budget process work, it is an opportunity for us to really get into this, get the off-budget agencies back on budget and know exactly what we are doing. I think if we are going to be a part of setting the priorities of this country, we have got to get in here and be active in it. We cannot sit back and vote "no"; that is easy, that is beautiful, but we have got to participate if we are going to have any effectiveness in it at all.

So, Mr. Speaker, like they say over in Maryland, "You've got to play to win."

Mr. CONABLE. Mr. Speaker, will the gentlewoman yield?

Mrs.HOLT. I yield to the gentleman from New York.

Mr. CONABLE. Mr. Speaker, I thank the gentlewoman for yielding, and I compliment the gentlewoman from Maryland.

Mr. Speaker, an item in the first concurrent resolution on the budget demonstrates the potential in the congressional budget process for unexpected, unintended, and undesirable consequences which could force us to take actions that make neither practical nor political good sense.

Included in the recommended level of Federal revenues is an item of some $192 million which is to be raised by levying a tax on coal pursuant to section 9 of H.R. 4544, the black lung legislation reported in March by the Education and Labor Committee.

Despite Republican urgings to the contrary, the Ways and Means Committee has chosen not to exercise its rightful jurisdiction over this revenue-generating legislation which leaves the actual tax rates to the discretion of the Secretary of Labor. Nevertheless, because of the requirements of the Budget Act, it is conceivable that the Ways and Means Committee could end up paying the bill for some or all of the $182 million.

Theoretically, of course, the budget process provides for such a situation by permitting an adjustment of revenue levels in the second concurrent resolution. But in the meanwhile, important tax decisions are being made, and the Ways and Means Committee must work within the context of the targets established in the first resolution. The result, quite possibly, could be to limit the flexibility of the Ways and Means Committee to enact tax cuts that might be desirable from an overall economic standpoint.

After enactment of the second concurrent resolution, a revenue requirement reflecting another committee's actions still might exist—perhaps in a situation where the House but not the Senate had enacted a bill. At that point, although a point of order could be raised against legislation that would cause revenues to be less than amounts indicated in the budget resolution, nothing would require enactment of legislation bringing revenues up to prescribed levels.

This would pose a dilemma as to how to comply with the letter, if not the spirit, of the budget process. And even

though the Ways and Means Committee had not exercised its jurisdiction over the revenue measure at the beginning of the year, it could well inherit it at the end of the year by being forced to forego tax cuts that would otherwise have been enacted.

I believe the budget process is having its intended effect in forcing self-discipline and priority-setting. But there are still snags. It is not hard to see how the budget process could boomerang and come back to hit us from the least expected direction.

Mr. GIAIMO. Mr. Speaker, I yield 2 minutes to the gentleman from Texas (Mr. BROOKS), for purposes of debate only.

Mr. BROOKS. Mr. Speaker, the House and Senate conference on the first concurrent budget resolution for fiscal year 1978 has attained what earlier appeared unattainable—a reasonable compromise on the budget targets for fiscal year 1978. I urge your support of the conference report.

In the brief history of the budget process we have never had a more severe test of our capacity for self-discipline. No Member of Congress ever assumed that any set of recommendations could be conceived in such a way that all competing demands and interests could be accommodated. The critical test was reasonableness and accountability. Both bodies have worked their will and the House and Senate conferees have ironed out the major differences between the House and Senate particularly in the area of national defense.

I emphasize that this is a target resolution to guide our future spending actions and revenue decisions. It is not binding. That is the essence of the budget process—flexibility tempered by self-discipline.

Mr. LATTA. Mr. Speaker, I yield 5 minutes to the gentleman from Ohio (Mr. REGULA).

Mr. REGULA. Mr. Speaker, Members of the House, at the conclusion of the House-Senate conference last Wednesday, my colleague from Maryland (Mrs. HOLT) and I signed the conference report as House Republican conferees.

My decision to support the resolution now before us was not an easy one. There are a number of disturbing and inappropriate features: The overall spending totals are out of line with what economic conditions warrant; the concomitant deficit is excessive, and many individual program functions have a potential for excessive spending depending on committee action.

On the other hand, the resolution as reported out of conference is much improved over the version passed by the House recently. The dangerous cuts in national security were largely restored to a level which those of us concerned with the defense of this country can accept. This restoration is vital to our Nation's security.

The deficit projected for 1978 was reduced by nearly $2.3 billion while that for 1977, at the insistence of the Republican conferees, was slashed by $6.6 billion. Both deficits are still high. But they represent a movement in the right direction. However, my decision to support this resolution was motivated by additional factors.

Of utmost importance is the preservation of the vital budget process Congress designed for itself to follow. I am convinced that, in the absence of the fiscal discipline required by the budget process, the spending totals and priorities established within the resolution would be far worse. A deficit of $64 billion is completely inappropriate to the economic conditions that will prevail in the year to come. However, it is considerably more "appropriate" than a deficit of $70 or $80 billion. I feel certain the latter would have prevailed had we abandoned the budget process.

The major objections to the budget process come from those who want more, not less, spending.

There are those Members who claim that social programs are being sacrificed in order to increase the defense budget. Although such accusations are unfounded they are increasingly in vogue. The fact is that since 1969 the defense portion of the budget has increased by 38.4 percent. In the same period, the human resources portion has increased by 274.8 percent.

I imagine there will, however, always be those who seek to refute these facts. To them, the control we strive to achieve through the budget process is a threat. Future fiscal responsibility is dependent on adoption of this conference report. We cannot demand a balanced budget, a moratorium on new spending, and tax relief for the American people, if we help destroy the one vehicle we have to accomplish these objectives—namely the budget process. We are a long way from reaching these goals, but must seize the tool to achieve them which is available.

The budget process has endured a severe test in the past weeks. The turmoil surrounding its survival attests to its strength, not its weakness.

I sincerely believe the resolution before us is the best we can achieve at this point. During the floor debate on the first budget resolution many of us offered a reasonable and viable alternative which was rejected outright. While disappointed, I feel the time will come when such an alternative can win—as long as we have the vehicle of the budget process to accomplish it.

In the interim, I support this resolution. Our likely alternative right now is an even higher deficit, worse inflation, weakened defense capability, and further redistribution of earnings away from the working, taxpaying American.

Mr. GIAIMO. Mr. Speaker, I yield 2 minutes to the gentleman from Florida (Mr. LEHMAN), for the purpose of debate only.

Mr. LEHMAN. Mr. Speaker, I rise in support of the conference report on Senate Concurrent Resolution 19, the first concurrent resolution on the fiscal year 1978 Federal budget, and urge my colleagues to join me in voting for it.

Previous debate and votes have shown that most Members of this House support the congressional budget process, even when we differ on the details of specific resolutions. Keeping in mind that no budget can please everyone, we must work, and this committee has worked, to displease everyone as equitably as possible, and to forge the delicate balance between conflicting needs and policies.

I was privileged to be a conferee, working with our exceptionally able chairman, BOB GIAIMO. In large part, we owe our success in conference to our chairman, who never lost sight of the need to make decisions in each of the functional categories based on their relationship to the total budget, not on isolated jurisdictional considerations.

Perhaps the most difficult agreement the conference reached was on the figures for function 050, National Defense. With our chairman's leadership, we were able to stay closer to the House mark than to the Senate's, fully $200 million below the halfway point in the critical area of budget authority. The conference figure of $118.5 billion fully discharges our responsibility to maintain an adequate defense, and, although the original Senate figure was substantially higher, the Senate has now given its "advice and consent" to the lower level in agreeing to the conference report on Friday.

Mr. Speaker, the House should today follow suit and establish the targets for our spending and revenue actions this summer. These are fair and balanced targets, and deserve our support.

Mr. LATTA. Mr. Speaker, I yield 3 minutes to the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Speaker, today we are voting on the much heralded budget compromise for the first concurrent resolution on the budget which was worked out last week in conference committee. For 3 days, conferees wrestled with differences in various functional categories in an effort to come up with the "magic numbers" with which a majority in both houses could agree. Whether or not the conferees were successful in their attempt is yet to be determined. But, as a member of the budget conference which worked to develop the final solution, I would say, Mr. Speaker, that as far as I am concerned, we were not.

It is beyond me to believe that a budget resolution which recommends a near record deficit of over $64 billion can be called a compromise for which we should vote. It is impossible for me to reconcile a resolution which boosts the debt subject to limit to $784 billion with something with which we can feel comfortable. Finally, it is difficult to understand how we can dare apply such an appeasing term as "compromise" to a budget which recommends a defense outlay of $111 billion for the coming fiscal year—a full $1.8 billion under the most recent administration estimates for needs for defense and a very healthy $4.9 billion under the administration figure in terms of budget authority. In my view, any budget conference agreement with these characteristics is more of a sham than a compromise.

In addition to the deficits that the conference report recommends, the resolution refuses to recognize the true needs of the average American by refusing to provide for a permanent across-the-board tax reduction for the 90 million working people in this country. On five

occasions, the majority voted down minority amendments which would have provided permanent tax cuts to the taxpayers of this country. An amendment which I offered would have given to the American worker a permanent, across-the-board tax reduction of 10 percent. It is unfortunate that while gargantuan Government spending schemes and bureaucratic welfare programs are carefully catered to in this budget, the true needs of the average American, the needs that can be met by permanent tax cuts, are sadly forgotten.

Mr. Speaker, we have heard much talk in recent days on how the outcome of this resolution is going to "make or break" the budget process. Unless this budget resolution is passed today, we are told, the Budget Control Act, will have been largely for naught. I agree that if the budget process were to be destroyed it would be indeed unfortunate. It is not my belief, however, that the process is worth saving at the expense of record deficits, distorted budget priorities and continued inflation and unemployment which have been the sorry results of this process ever since the Act was passed. It is regrettable for me to say that the budget process, rather than controlling deficits, has simply "legitimatized" them. Somehow, now that we have a budget process, many Members can feel comfortable in passing multibillion deficits because, they assure us, the "process" is keeping things in control.

Mr. Speaker, if this is what we are saving by approving this resolution this afternoon, I for one say that it is not worth it. Perhaps by defeating the resolution, we will all be shaken into a realization that we have to take a new look at the way we have been using the budget process and realize that the deficit-spending mentality which has characterized the Congress over the last several years has got to be changed.

For these reasons, Mr. Speaker, I urge my colleagues to join me in asking for a nay vote on the conference agreement and a new approach to fiscal policy in this Congress.

Mr. GIAIMO. Mr. Speaker, I yield 2 minutes to the gentleman from Texas (Mr. BURLESON), for purposes of debate only.

Mr. BURLESON of Texas. Mr. Speaker, I do not suppose there are many measures that come before this body with which every Member is pleased, and that is particularly true of legislation of this magnitude. Even when we consider resolutions or bills followed by unanimous votes, there are many times when most of us would like to do something a little differently.

Let us recall the debate on the passage of this resolution. Most of us feel now as we did then, although in my opinion this is a better resolution than the one that left this House, that it is unsatisfactory in a number of respects.

Many of the Members complained during the debate—maybe I should not use the word, "complained"; I will say, "contended"—contended and still contend that we should have a greater portion of our substance and priority pointed toward social programs. Many of us felt and still feel that not enough is pointed toward our national defense if we are to maintain our posture as No. 1 in strength throughout the world.

Then, too, we have heard the discussion about the deficit. I am not happy with the deficit either. As a matter of fact, I want to do those things which will balance this budget, as the President intends, by 1981. I do not see how that is going to be done, but at the same time I am going to do those things that are helpful in that direction.

The deficit we are talking about here is a little bit like the ceiling on the national debt. We should ask ourselves: What is our choice? The choice comes when huge spending programs are before us for authorization. That is the time to say no to raising the debt ceiling, increase the interest on that debt and running up a deficit.

Mr. Speaker, not withstanding objection to parts of this resolution I support it to preserve the budgetary process which holds promise of getting handles on our fiscal affairs. It will work if we make it work and I think we must give it a chance before we abandon the idea.

Before I yield the floor I pay my compliments to the chairman and my colleagues on the committee for their devotion to causes they believe in. It is no secret that more often than not I find myself in the position of being a minority on the majority side. In that situation I shall probably remain. I do however think that more differences could be resolved in the committee than was done when this resolution was brought to this floor for debate and which was initially defeated. That should be avoided in the future.

Finally Mr. Speaker, I wish to compliment the minority members who served on this conference. The gentlelady from Maryland, Mrs. HOLT, stood firm on the issue of national defense and is instrumental in bringing before in this report a much improved and more acceptable provision than that passed by the House.

Mr. LATTA. Mr. Speaker, I yield 4 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker—

> The Republican Party advocates a legislative policy to obtain a balanced federal budget and reduced tax rates.

Those are not my words. That statement is contained in the Republican Party platform of 1976:

> Inflation is the direct responsibility of a spendthrift Democrat-controlled Congress that has been unwilling to discipline itself to live within our means. The temptation to spend and deficit spend for political reasons has simply been too great for most of our elected politicians to resist. Individuals, families, companies and most local and state governments must live within a budget. Why not Congress?

Those are not my words; those are the words of the 1976 Republican Party platform.

I know that a lot of people do not think party platforms mean anything, and a certain number of people in this country have come to believe that parties do not stand for anything. Witnessing what is happening here today, I may have to concede that they are correct. But one thing I cannot stand for today is this budget resolution.

Mr. Speaker, I must differ with those Members on my side and conservative Members on the other side who stand before us today and are telling us that, for some strange reason, because of some undeniable urge to participate in this budgetary process, conservatives have to take a stand that flies in the face of all the principles for which we have fought over the years. In so doing they would embrace a $785 billion national debt and a $65 billion annual deficit and do it under the cover of a proper level of defense spending.

They are compelled to do so, I have been told, because they feel that the budget process which Congress instituted 3 years ago is of such great importance that it must not be allowed to fail. Those who advocate this position in my view are simply saying that this new procedure is more important than principle. As one who has a great love and respect for procedural safeguards I can understand that position. But in this instance I cannot endorse it.

What, pray tell, is the process about which they are so concerned? Is this process really worth honoring at the cost of embracing a $785 billion national debt and a $65 billion deficit for the coming year? And make no mistake, along with that loving embrace those who engage in it must accept the consequences of the increased inflation which is now raging at an annual rate of nearly 12 percent if the last few months figures are any true indicator. They must be willing to accept the underlying theory of the major proponents of this conference report, that the Federal Government has the ability to promote and produce prosperity by taking vast amounts of wealth from the taxpayers of America and redistributing it for programs which may or may not aid those in need, but which surely support those who are in charge of the programs by increasing their powerful grip over our lives.

When this much heralded budget process was enacted into law 3 years ago we were told that it would force the Congress to examine its fiscal policies as a whole. It would make us live within our means. It would cause us to pause repeatedly, as would any prudent household budget maker or businessman, and fully assess our assets and needs; then produce a sound judgment. We were even told that it would eventually lead to the millennium—a balanced Federal budget. Something I always thought my party stood for without qualification or question, until today.

The truth of the matter is that this magnificent budget process has produced 2 years of enormous national deficits and huge additions to the national debt. Oh yes, it has allowed the liberals in Congress to smile with satisfaction as hundreds of new staff members have sat down and added up all the figures and told us the already notorious bad news about congressional spending habits and lack of self-control. But the major promoters of this conference report think that these figures are beautiful to behold. Like the parents of the ugly little brat,

their child, however illegitimate, cannot be wrong.

Fidelity to this budget process is certainly not all that warranted. I have sat on this floor day after week after month in the last 2 years and seen hundreds of rules passed which wave the budget process so that more and greater deficit spending can go forward. And any process which has produced such deficits and debts does not command this Member's obedience or respect. I would suggest that any adding machine or computer could achieve the same effect at much less cost and with much less time.

Mr. Speaker, what are the awful consequences which might befall us if this resolution is rejected? Well, the membership of the Budget Committee and all its staffers would have to start over again. Like the redemption of baptism which provides a second chance for sinners, they would have a clean slate with which to begin. They could return to their task and make the budget process work as its founding advocates said it would. They could adjust defense figures and cut down on deficits and debts.

And if they refused to do so, the rest of our authorization and appropriations work would grind to a halt. And that would not be all bad. It would focus the eyes of America on Congress, once again racked with scandal. But the scandal this time would be the continued unwillingness of the overwhelming liberal majority to bring our national economic house into good order. The liberals outright rejection of the need for an adequate national defense would be further accented. They might even be forced to change their ways and provide what my party has up until now, said the American people want—less taxes, less inflation, less government, and more freedom.

No, in my view, the budget process has become, as perhaps inevitably it had to become, a political football, allowing liberal members to posture about the wicked conservatives who are said to care nothing for those who have "human needs" which must be met. Conservatives, instead, are said to owe their blind obedience to the munitions manufacturers and the Pentagon brass, the hate objects of the Left, the military-industrial complex.

Mr. Speaker, I realize that one of the central arguments about this first target budget resolution has centered around the defense issue. I have been told that this report is a compromise which goes far toward restoring defense spending. But the amounts for defense contained in this report are still $2 billion below President Carter's request and $4.5 billion below President Ford's request. Some money was restored in conference for defense, but many of us—in fact a majority of us in this House at one point believed that the figure we have before us today was certainly insufficient in the face of international realities. We do believe that a cold war still exists in this real world.

Yes, we conservatives think that human needs and human survival are very important, but both of those principles will not mean a tinker's damn if this country is not free, and most Members on this side really do believe that freedom can only be guaranteed by our maintaining a strong national defense.

Mr. Speaker, this resolution does not necessarily do that. So what do conservatives get for themselves by trading off their principles as we engage in this debate today?

Mr. Speaker, the same liberals who are cozying up to us today will drop us tomorrow. Three weeks ago they were attacking the minority party for not giving them the number of votes they needed to pass the first budget resolution. They have a 2-to-1 majority in this House. How much more must they demand?

They are the same people who in the next several months will be hacking the defense budget well below the figure this resolution sets today, because they are against almost any spending for defense.

Mr. Speaker, there is no reason at this point for my party or conservatives in either party to back down on what they have always understood to be proper and correct. We cannot swallow deficits and debts and still pretend to be true to ourselves and our principles.

Mr. Speaker, if the average American was asked to vote on this conference report, most of them would probably oppose it overwhelmingly. The American people would agree with the suggestion made by the distinguished gentleman from New York (Mr. KEMP) that the Government get off their backs and get its hands out of their pockets, that it reduce their taxes, that it cut down its spending and do away with all the many programs that the American people do not need, do not want, and that only lend greater power to the bureaucrats who control our lives.

Mr. Speaker, there is a special irony in seeing the margin of victory for this radical spending resolution provided by the Republican leadership of this House. The majority of my party does not share their view nor will they vote for the positions those leaders advocate today. They will instead stand by the conservative principles our party has always fought for, and for which our leadership should be standing today.

Mr. Speaker, I should like to quote the message of Abraham Lincoln, delivered in 1859 to a then very young Republican Party in Illinois. He said:

> If we do not allow ourselves to be lured from the strict path of our duty by any such device as shifting our ground . . . then the future of the Republican cause is safe . . . stand by your principles . . . and victory, complete and permanent is sure at last.

Mr. Speaker, I do not think that victory for my party is the most important thing; I think victory for my country is.

Those who vote for this resolution are harming our country by espousing the bankrupt fiscal policies which have caused most of our economic problems for the last four decades, I urge a vote against the motion of the gentleman from Connecticut.

Mr. GIAIMO. Mr. Speaker, I yield 2 minutes to the gentleman from Illinois (Mr. SIMON), for purposes of debate only.

Mr. SIMON. Mr. Speaker, in the opening remarks in the House the distinguished chairman of our committee used this phrase, that this compromise is "a reasonable and realistic compromise."

I think it is all three. It is reasonable, it is realistic, and it is a compromise.

No one faction, no one viewpoint got its way completely; and there is a fourth thing: It is responsible.

Mr. Speaker, in response to the gentleman from Maryland (Mr. BAUMAN), who just spoke, I would like to quote from the words of the distinguished gentleman from across the river, the gentleman from Virginia (Mr. FISHER), the other day.

Mr. Speaker, I will read a statement by him which had these words in it, which I think contain great wisdom. He said:

> The best is sometimes the enemy of the good. The bad must sometimes be chosen rather than the terrible.

Mr. Speaker, that is what the case is here. The gentleman from Ohio (Mr. REGULA), to whom I will yield in just a few seconds, used the phrase "fiscal discipline." That is what the choice is: It is fiscal discipline or fiscal chaos.

Mr. Speaker, I would like to see a budget more attuned to the kind of preferences that my colleague, the gentleman from Maryland (Mr. MITCHELL), would like; but that is not the choice we face right now. We face the choice of doing a responsible job or not doing a responsible job. Clearly, I think, we have to do a responsible job so that an increasing percentage of our tax dollar goes to the needs of this Nation and not for interest payments.

Mr. REGULA. Mr. Speaker, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Ohio.

Mr. REGULA. Mr. Speaker, I thank the gentleman for yielding.

Some of the members of the British Parliament met with members of our Committee on the Budget to examine this process because they felt that the kind of budget control we have in the Congress would help them to slow down spending in their own country. Is that right?

Mr. SIMON. The gentleman is correct.

Mr. LATTA. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. KEMP).

Mr. KEMP. Mr. Speaker, I thank the gentleman for yielding.

The total tax liabilities of the American people in this budget combined with State and local budgets will consume 44 percent of the national income. Of all the income that is produced by people and business in America, 44 percent of it goes to taxes at the Federal, State, and local level. If you add inflation it is nearly 50 percent of all income that now goes to one form of taxation or another.

Mr. Speaker, this means that into June the average American is still working in order to just pay taxes. Is it any wonder that people are discouraged and disappointed by Government.

The overwhelming number of people in this country want tax relief and tax reduction, reduction of that excessive burden of taxation that is discouraging work, production, savings, and investments, as well as hope and incentive.

Mr. Speaker, the complaint I have with this budget resolution is that room was

found to accommodate the President's $12 billion economic stimulus package, room was found in it to increase the CETA program spending, room was found in the budget resolution to accommodate a $63 billion deficit, but when the minority attempted—and I say this to my friends on the minority side—when we attempted to reduce taxes of the American taxpayers we were told five times there was no room for it in the budget.

It seems to me, Mr. Speaker, that therein lies the problem that many of us have with accepting a compromise resolution. Where is the compromise? There was no spirit of compromise so as to work with us to help inflation-proof the American people's income. We tried five times for modest reductions in taxes but the majority argued that there was no room in the budget resolution for a tax cut. But, Mr. Speaker, we find room in the budget resolution for a $63 billion deficit and billions of dollars in increased spending programs. Suffice it to say that I do not think it is a compromise, but a sad day for the people who expected more of their elected representatives.

Mr. LATTA. Mr. Speaker, I yield 1 minute to the gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Speaker, I thank the gentleman from Ohio for yielding to me this time.

Although there are those who have criticized individuals who have opposed the budget resolution, those of us who oppose this resolution do not oppose the budget process. We oppose the end result. It is not because we are not compassionate and we do not care; it is because we just cannot continue on taxing, taxing and taxing the citizens of this country. We are very much in danger of "Britainizing" this country of ours. Take a look at what has happened to Great Britain. I, for one, do not want to see this country in that direction.

I support and commend President Carter for his approach on a balanced budget by 1981, but goals are ends to be achieved. Plans are the means to achieve them. But those plans must be consistent with the goals. In this case we are not moving in the right direction. If we take all incentive away from the private sector and from the individuals who pay the taxes, then we will not have anything left for the services that Government must provide. This resolution threatens to do just that, and I urge its defeat.

Mr. LATTA. Mr. Speaker, I yield 2 minutes to the gentleman from Colorado (Mr. ARMSTRONG).

Mr. ARMSTRONG. Mr. Speaker, I thank my colleague, the gentleman from Ohio (Mr. LATTA), for yielding me this time.

Mr. Speaker, I want to compliment the members of the Committee on the Budget for the work and for the dedication they have brought to this subject. Although I disagree with the final outlook, I believe they deserve our thanks for the way they have gone at their work and for the effort they have put in it.

Mr. Speaker, we are being asked to support an inflationary budget resolution in order to get improvement in the military appropriation. While I support a high level of spending for the military, because I recognize the military threat, I believe we ought to reflect for a moment on the fact that there are other threats to the Nation in the future, such as the economic threat implied by this resolution, which, in my judgment at least is as great a one as any from the Soviet Union or from China or any other nation that may threaten us.

This is an inflationary bill. It is an anti-investment bill. It is a bill which will foster unemployment by destroying jobs in the private sector.

May I comment also on the process. We are told that we must vote for this in order to preserve the process. Mr. Speaker, the process is not an end unto itself but merely a means to an end. It is just a vehicle; and if the vehicle is taking us, as others have suggested, down the road that the city of New York and nations such as England have followed, then I do not want to be in that vehicle no matter how elegant and refined it may be.

Mr. Speaker, may I simply say, if we vote for this, then what is our purpose? If Republicans support this, standing out as a party for a balanced budget, then what is our purpose as Members of Congress? If we do not hold out for that alternative, then the people at home do not have anybody to turn to when they get ready to balance the budget.

Mr. GIAIMO. Mr. Speaker, I yield 2 minutes to the gentleman from Michigan (Mr. FORD).

Mr. FORD of Michigan. Mr. Speaker, I rise in support of the conference report on the first budget resolution establishing spending targets for fiscal year 1978. The new budget process was adopted in 1974 in order to give Congress the capacity to establish its own priorities and to give an accounting to the American people of its spending and revenue decisions.

I support this resolution because it accomplishes these objectives. I believe the compromises arrived at in conference with the other body are both reasonable and appropriate given current economic conditions.

I realize that there has been considerable controversy concerning the appropriate level of defense spending. This process has indicated both to the President and the Defense Department that the Congress has priorities other than high defense spending, especially when we have an unemployment level in excess of 7 percent and the very real prospect of a resumption of double-digit inflation.

I commend the Budget Committee and the Senate conferees also for preserving the basic reordering of priorities initially passed by the House of Representatives. The conference agreement provides over and above the President's recommendation of $1,712,000,000 in budget authority for educational programs; an additional $450,000,000 in budget authority for Small Business Administration; an additional $250,000,000 for transportation programs including highways, urban transit, and railways; and an additional $53,000,000 for discretionary health programs. I am pleased to note also that the conference report recommends advanced funding for public service jobs, which will insure that our State and local governments can plan for their most effective use.

Even with this reordering of priorities, the deficit has been reduced almost $2 billion from the original House-passed version. My friend and colleague, the distinguished chairman, Mr. GIAIMO, and other members of the committee have done an excellent job in blending widely divergent views, and I commend them for it.

However, Mr. Speaker, I must point out to my colleagues that I do not want my support for this budget resolution to be considered as a complete endorsement of the original committee report which accompanied the resolution (Rept. No. 95–189 dated April 6, 1977). I must make this disclaimer only because I feel that it was the intent of the Congressional Budget Act that the Budget Committee would deal only in macrototals of budget authority and outlays—not in predetermined amounts for specific programs. To the extent that the committee's report addresses the question of a specific funding level for any specific program, I believe the report reflects only the opinion of the committee, not the will of the Congress.

The determination of specific funding levels for individual programs is, of course, left for the Congress to decide at a later time, after the Appropriations Committee makes its recommendations, and I would, therefore, not feel that any specific program funding levels mentioned in the committee's report will be binding upon the Congress with the adoption of this resolution.

Mr. Speaker, I urge my colleagues from both sides of the aisle to support this conference report.

Mr. LATTA. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. DEVINE).

Mr. DEVINE. Mr. Speaker, this is the culmination of the traditional struggle between the so-called military-industrial complex and the social welfare complex. Frankly, I think that the welfare-education complex poses a greater threat to the future of this Nation than does the military-industrial complex.

Peace through strength: I think during the 10 years I have had the privilege of serving in this body I have maintained a posture that peace through strength is the right posture, even though those of us who follow it are categorized as hawks. Those persons who support the education-welfare complex are variously described as the "do gooders," the "bleeding hearts," the "hand wringers," and the "deep breathers." We are categorized as hawks if we feel we should support the national defense complex.

I have great respect and admiration for my colleague, the gentlewoman from Maryland (Mrs. HOLT). I think that she struggled mightily to try to come to what she feels is the right decision in supporting this resolution, and I compliment her. I know she is sincere, and I know it was a difficult decision. I take the floor today merely to point out that not all of those of us in the category of

having a position in the Republican leadership intend to vote for a deficit of $64.6 billion.

It seem to me that we must look at this document. I think it is one of the most important documents that those of us in the Congress have to look at. It is the budget in brief. I invite the attention of Members to page 2, to the graph there which shows the position of the welfare programs, the do-gooder programs, as shown by this line, and the green line shows the national defense. The lines crossed in 1970. I invite everybody's attention to that.

Mr. LATTA. Mr. Speaker, I yield 30 seconds to the gentleman from Oklahoma (Mr. EDWARDS).

Mr. EDWARDS of Oklahoma. Mr. Speaker, I thank the gentleman for yielding. It will take just that long. I just want to make the point that the deficit in this bill is $64.6 billion, and there is $784.9 billion of public debt, and that the amount to which the limit of public debt will be increased is $83.6 billion.

To save the budget process by which this fiscal instanity will be preserved is absurd.

Mr. LATTA. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, let me first of all commend the chairman and the members of the committee and the staff for the work they have done on this, regardless of their positions on this conference report.

I might say truthfully if people voted for this budget resolution when it left the House of Representatives, they can conscientiously vote for this conference report; and if they voted against the budget resolution when it left this House, I believe they can conscientiously do so now.

Let me say at the outset I support this budget process even though I have disagreed with the outcome each and every time, and I disagree with it now.

During debate a lot of figures have been bandied about, but what scares me is what is happening to this country from the deficit standpoint. This budget has a $64.7 billion deficit—the second biggest ever. Still more serious is the national debt situation. In this budget resolution our national debt is going to go to $784.9 billion, up from $701.3 billion just this year, an increase of 12 percent or $83.6 billion in national debt.

The people back home are starting to understand what this national debt means to them, because cranked into this conference report which we are going to be voting on today are proposed payments of $45 billion alone on that national debt for fiscal year 1978. That is why I do not subscribe to what we have come up with in this conference report on the budget, because I think the third highest item on our budget in this country should not be the interest on the national debt. The people of this country are paying, in my humble judgment, for a dead horse. I do not think we ought to continue to have them do that.

I, too, subscribe to the thinking that by fiscal year 1981 we ought to have a balanced budget. But are we going to have a balanced budget by cranking in all these new programs? One that has not even been mentioned today has been sent down from the White House, that we ought to start drawing on the general fund to pick up the cost of social security. No one knows how much that will cost if we ever get crazy enough to adopt that particular recommendation. I hope we do not.

So we are looking to 1981 toward a time of balancing the budget? Absurd. Absurd, when we go to $83.6 billion further in the red in 1 year. By that time, the way we are going now, we are going to be a trillion dollars—hear that, a trillion dollars—in debt. How can we ask the American people to pay just the interest on that national debt?

That is why I am not supporting this conference committee report.

Mr. GIAIMO. Mr. Speaker, I yield 1 minute to the gentleman from Missouri (Mr. ICHORD), for purposes of debate only.

Mr. ICHORD. Mr. Speaker, on several occasions I have had the opportunity to correct my own mistakes, but it is rare indeed that I have the opportunity to edit the distinguished Latin student and my good friend and congenial adversary, on defense spending, the gentleman from Connecticut (Mr. GIAIMO), chairman of the House Budget Committee, as well as a Washington Post byline journalist, although I must admit that hardly a day passes that I do not take exception to some alleged fact or poor judgment of some no doubt well-intentioned but sadly misguided Washington Post editorial writer.

I ask my colleagues for just a few moments of indulgence for the edification of our CONGRESSIONAL RECORD readers and our students of poetry and prose, in order that I might correct the words of my honorable colleague from Connecticut (Mr. GIAIMO) the Washington Post coverage by Robert H. Williams, and most of all my own ruinous attempt to sanitize through the always inadequate device of paraphrasing one of Mark Twain's quotes made, I am convinced, during one of that great American humorist's more salacious moments.

During our second 1977 budget resolution debate, in the face of my rather persistent insistence that the House support President Carter's defense budget request primarily due to the status of the SALT talks, Congressman GIAIMO quoted Cicero in what I must characterize as most stirring tones "Quo usque tandem abutere patientia nostra, o catalina!" While the tone was fiery, the Latin was flawed and for our Latin readers of future generations and for Cicero himself, I would state that what the gentleman from Connecticut (Mr. GIAIMO) meant to say was: "Quo usque tandem abutere, Catilina, patientia nostra?" To further complicate this twisting of this archaic tongue, the Washington Post's Mr. Williams translates as follows: "How long, oh Cataline, will you continue to abuse our patience?" Once again, poor Cicero is abused. Mr. Williams should have translated as follows: "How long, Catiline, will you abuse our patience?"

To make matters worse, in the interest of propriety I offered in response to Mr. GIAIMO's Cicero, a poor translation of one of Mark Twain's more pithy statements. As so many women have taken exception to my Mark Twain quote, I offer in the interest of clarity the verbatim Mark Twain: "Statistics are like ladies of the night, once you get them down, you can do anything with them."

In defense of one of America's greatest humorists and writers may I further explain as a Missourian that Samuel Clemens, whose roots originated in Kentucky but whose family eventually elevated themselves by moving to Missouri, did not employ the term "ladies of the night" in reference to the female version of homo sapiens who merely stay out late in the evening. Let there be no doubt about that. His remarks encompassed only the unvirtuous, not the virtuous ladies.

My good friend, the gentleman from Connecticut, BOB GIAIMO, allied with my good friends, the gentleman from Texas JIM WRIGHT, and the gentleman from Indiana JOHN BRADEMAS—I do not know where "Tip" was on the matter, as JIMMY called him personally—did not commit, I am sure a "moral" error when they "twisted enough arms" to reverse the vote from 218 to 185 in favor of the House Committee on Armed Services to 233 to 176 in Congressman GIAIMO's favor but I do hope and pray they did not commit a "mortal" error.

With the record now straight for Cicero and Mark Twain, I would advise my colleagues that I must vote against this conference report because I believe, as an accountant, that the House Budget Committee has gotten down on paper some extremely dubious and unvirtuous assumptions and done anything they wanted with them to the dire detriment of the national security of the United States of America.

Mr. GIAIMO. Mr. Speaker, I yield 1 minute to the gentleman from South Carolina (Mr. DERRICK).

Mr. DERRICK. Mr. Speaker, I rise in strong support of the conference report on the first budget resolution for fiscal year 1978 and I urge my colleagues to vote its passage.

As a member of the Budget Committee and a conferee on this resolution, I would like to express my deep respect and profound admiration for our chairman, the gentleman from Connecticut, BOB GIAIMO. Our chairman has kept this vital budget process on course and has steered us through very troubled waters. A new administration, an uncertain economy, the demands of the committees of this House, and the formidable posture of the other body are only some of the difficulties faced and resolved. His patience, understanding, and good humor were sources of strength to all of us.

Specifically, the following are major accomplishments of the House conferees:

First. The deficit is estimated at $64.65 billion, almost $2 billion lower than the original House figure.

Second. Our agreement with the Senate with respect to the defense function (function 050) provides a recommendation of $118.5 billion in budget authority and $111.0 billion in outlays. The critical

area of budget authority is $1.4 billion higher than the House passed version.

Third. Our domestic targets include advance funding into fiscal year 1969 for public service jobs, additional funds above the President's recommendation in education, veterans' benefits, and in health. As part of our agreement with the Senate, we reduced other functions by about $1 billion. Another $2.5 billion was reduced as a result of reestimates.

This is a target resolution. It provides flexibility for the Congress to work its will. We should remind you that if it is not passed we cannot consider any legislative matter that involves expenditures or taxes without special waivers. Adjustments will be made when our ceiling resolution is considered in September.

We think that it is imperative as elected representatives we demonstrate our commitment to the budget process because only through this process can we bring expenditures under control.

The development and acceptance of any budget is a disagreeable task. There will always be unmet needs, and the competition for public resources will always exceed their availability. This is the reality of real world and to function effectively we need the order and logic of a budget process. We cannot abandon the discipline of this process. I urge you to pass this conference report.

Mr. LEGGETT. Mr. Speaker, the budget process is presently undergoing its most critical test since its inception over 2 years ago. I recognize that during the early years many Members were willing to set aside their own views and preferences in order to help this new process get underway. I predicted then that Members would not do this forever, and that they would not support budget resolutions unless they agreed with the substantive recommendations.

There is no doubt in my mind that the issue before us today is whether or not the goals set forth in this conference report are reasonable, not only to us but to the American people. We have had great difficulty arriving at these decisions, but since March 15, when our standing committees filed their initial reports to the Budget Committee, every Member of both bodies of Congress has had ample opportunity to change and alter any and all of these targets. Now, we come to the time of the adoption of the resolution. It is a target resolution; it is flexible; it is open to further revision and change. Beyond that, I think that this resolution is a reasonable compromise of widely divergent viewpoints.

I do not call on any Member to support this resolution because of the budget process alone. Our recommendations must stand or fall on their own merit.

I would like to review for you what I think are our major accomplishments—accomplishments which demonstrate conclusively, in Chairman GIAIMO'S terms, that we are no rubber stamp, that we are capable of setting our own priorities, and that at the same time we are giving President Carter a budget he can work with.

Specifically, the conference report provides:

First, a reordering of priorities to include $1.712 billion in budget authority and $691 million in outlays over and above the President's budget revision for programs in elementary, secondary, and postsecondary education;

Second, an additional $53 million in budget authority above the President's revised budget request in the health function, primarily for discretionary health programs;

Third, approximately $250 million in budget authority above the President's revised budget for transportation programs, including highways, mass transit, and railways;

Fourth, an additional $425 million in budget authority for Small Business Administration programs;

Fifth, an additional $3.8 billion in budget authority in advance funding in fiscal year 1979 for public service jobs which is "up front money" to insure adequate planning at the State and local level.

The conference agreement, I believe, achieves the best possible adjustment of the controversial defense expenditure targets. You will recall that the original House position provided $117.1 billion in budget authority for national defense and the original Senate position was $120.3 billion in budget authority. The House and Senate conferees arrived at the figure $118.5 billion in budget authority, and $111 billion in outlays. This compromise is much closer to the House-passed version than it is to the Senate in budget authority.

Let me put a few myths to rest on this issue, however. The defense budget has not been cut to the quick. The Defense Department is still alive and well getting $10 billion more than it received last year. Not one program, or weapons system, or job is in jeopardy. However, by reducing the President's defense request for fiscal 1978, we are calling on Defense Department officials to improve their financial management system. They know they can do this, and they know that we know they can do this. In addition, we are calling on them to bring under tighter control their personnel practices. This means longer tours of duty, a review of transfer policies, and a go-slow policy on advancement of personnel to absorb pay increases. Other agencies of government have been asked to trim, scrutinize, and monitor their budget requests in an attempt to reach control over government expenditures and I, frankly, for one, cannot see why the Department of Defense cannot also march to the tune of fiscal responsibility. If President Carter needs assistance in balancing the budget and curtailing defense expenditures as he promised the American people in his campaign, then we must be prepared to help him.

Let us now talk about that magic figure, the deficit. Since I have been in Congress, I know of no figure that receives any more political attention and less economic understanding than this one. I realize that some Members will be pleased when I say that the compromise with the Senate lowered our estimated deficit by almost $2 billion. To others, this may not be enough. The national debt will still soar to $785 billion by the end of fiscal year 1978. I am convinced that our concurrent resolution is a step in the right direction.

As a conferee, I supported this report as the best possible accommodation of many hardened and divergent views. Moreover, I feel this report is a fair compromise, and I strongly urge your support. Thank you.

Mr. FRENZEL. Mr. Speaker, this resolution is a significant improvement over the one which this House approved previously. The deficit has been reduced by several billion dollars, and some spending programs have been reduced a little.

But it is hard for me to make much of a distinction between a $64 billion deficit and a $66 billion deficit. While the former is $2 billion better than the latter, both are intolerable. A deficit of that size in a good recovery year is outrageous.

It makes no difference that the conference committee made a fair compromise and, in the process, improved the House version. The tiny improvements do not justify a vote for it. It should be rejected as excessively expensive.

This year's first budget resolution has had an unusual history in this House. Originally it was controlled by our most free-spending Members. Their version failed. It has subsequently been moderated so that our most liberal Members join our most conservative ones in approving it. This is a situation, that often occurs on debt ceiling bills.

Therefore, the vote is expected to be close. Majority Democrats have accused minority Republicans of shipwrecking the resolution. As one member of the minority, I feel I have no responsibility to support a budget with a $64 billion deficit. The budget process will be sustained only if its product, the budget resolutions, earns the support of the House. If the majority Members believe a $64 billion deficit has earned support, let them vote for it.

It is not worthy of my support. I shall vote against it.

Mr. DON H. CLAUSEN. Mr. Speaker, I am deeply concerned with the budget resolution we are debating today and will vote against this proposal which will give congressional approval to a budget deficit of $63 billion.

Our stated goal is supposed to be to strive toward a balanced budget—particularly in times of relative prosperity and in time of peace. I am unable to see any small steps whatsoever in this direction by the Budget Committee.

As I see it today, the only possible way to approach a balanced budget is to have a more realistic balance between the parties in the Congress. Unless and until the American people will take their Government seriously, evaluate congressional action more careful and extensively, and direct their votes toward those people who genuinely believe in budgetary discipline, our Nation will continue down the path to debt and insolvency in the future.

It is accepted that budget deficits lead to inflationary trends that promote the psychology of inflation in the minds of many people. It is up to the Congress to reverse that trend for the benefit of all

Americans, and we find ourselves today voting on a totally unacceptable resolution that creates more problems that it hopes to solve with these vast expenditure on unnecessary programs that could have been reduced or eliminated.

Great Britain has gone down this road. The city of New York has gone this road. Now the majority leadership of the Congress wants to take the United States down this road. I ask the question—who is going to bail out the United States?

Who is going to bail out the millions of senior citizens whose fixed incomes become pitifully inadequate from the curse of inflation? Who is going to bail out the small businessman who is squeezed by the effects of inflationary pressures on his business? Who is going to bail out the working men and women whose wages do not keep pace with the rate of inflation and whose pockets are picked by higher tax rates when they do earn an increased salary?

It is time that the American public calls to account those in the Congress who are endorsing this kind of irresponsibility. The Congress has got to exercise some leadership. Those of us who have introduced sunset laws, for example, recognize the need for substantive action to fight these deficits and the inflation they spawn. But we are in the minority.

We can support the kind of budget ceiling that addresses the basic needs of the country. One that is consistent with our constitutional mandate and meets the real needs of our Nation and that makes allowances for emergencies that arise. But we are in the minority.

We need to move ahead positively and constructively to see to it that the minority on this vote today becomes the majority of the future. I strongly believe that American people recognize this need and will support such an effort.

It is their future at stake. It is their economic liberty at stake. It is their financial freedom at stake.

I hope they will get the message. If they do, you can be sure this will be the last time the Congress will approve a $63 billion budget deficit. It will be the last time it will be so cavalier with a budget that has to include a payment of $43 billion just for interest on the national debt.

If they do not get the message, we are on the threshold of the time when the U.S. Government will owe $1 trillion. That is a bill our children are going to have to pay.

The message is being sent out, we can only hope that it is understood and acted upon.

Mr. WEISS. Mr. Speaker, I rise in opposition to the motion to cut off floor debate and to pass Senate Concurrent Resolution 19—the conference report version of the first concurrent resolution on the budget for fiscal year 1978.

The House should reject Senate Concurrent Resolution 19 and insist on its version of the budget which it passed on May 5.

I have a great deal of respect for the gentleman from Connecticut (Mr. GIAIMO) who, as chairman of the Budget Committee, has so diligently attempted to achieve the development of a just and fair budget. But I must vote against this conference committee version—a so-called compromise—because it approves a bloated and wasteful national defense budget of $118.5 billion while providing for an inadequate spending effort for domestic programs.

The House first considered the budget resolution on April 27. At that time I stood in disbelief as many of my colleagues voted to increase the already excessive defense budget by $4 billion for a total of $120.1 billion; while rejecting a measure that would have transferred approximately $4 billion from national defense spending and placed it into desperately needed domestic programs. Some 252,300 extra jobs would have been created, if the transfer measure had passed; and wasteful defense spending would have been trimmed to a more appropriate level. In the end this version of the budget was viewed by the House as being so unfair that it failed to win approval and the entire proposal was sent back to the Budget Committee for redraft.

In committee a compromise was supposed to be developed. This compromise was expected to employ an improved allocation of spending for domestic and defense needs. Instead the budget came back on the floor on May 5 still overweighted in favor of national defense spending for a total of $117.1 billion with little or no increase for vital domestic programs.

During consideration of this revised budget Congressman PARREN MITCHELL and I introduced an amendment to delete that $1.5 billion increase in order to improve the balance between defense and domestic spending. Unfortunately that attempt failed and the House agreed to the revision with the $1.5 billion increase in defense. This version of the resolution was sent to conference committee.

Now we have presented to us another revision of the budget, but this time there is another increase in defense spending of $1.4 billion—a total of $118.5 billion. In effect we are being asked to approve a total increase of $2.9 billion over the excessive defense budget which the committee first recommended. The thought of that increase is incredible and Congress cannot claim to be representing the American people while agreeing to such misdirected national spending priorities.

In addition the House, in agreeing to its version of the budget on May 5, fought back four attempts to increase defense spending beyond the $1.5 billion contained in the committee redraft. In other words the House, at that time, decisively rejected any attempt to increase the defense budget beyond the $1.5 billion increase.

I believe we cannot and should not, now, turn around and accept a proposal which increases the defense budget even more.

I urge my colleagues to join me in opposing the conference report version of the 1978 budget.

Mr. GIAIMO. Mr. Speaker, I move the previous question on the motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Connecticut (Mr. GIAIMO).

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 221, nays 177, not voting 34, as follows:

NOT VOTING—34

Abdnor	Hansen	Price
Applegate	Heftel	Railsback
Bonior	Johnson, Colo.	Roe
Bonker	Koch	Roybal
Clawson, Del	Krebs	Sisk
Corman	Lederer	Steers
Dent	Moffett	Teague
Diggs	Murphy, Pa.	Udall
Eilberg	Myers, Michael	Van Deerlin
Flippo	Nix	Waxman
Florio	Poage	
Forsythe	Pressler	

The Clerk announced the following pairs:

On this vote:

Mr. Dent for, with Mr. Abdnor against.

Mr. Eilberg for, with Mr. Del Clawson, against.

Mr. Corman for, with Mr. Hansen against.

Until further notice:

Mr. Florio with Mr. Applegate.

Mr. Heftel with Mr. Pressler.

Mr. Teague with Mr. Railsback.

Mr. Price with Mr. Krebs.

Mr. Waxman with Mr. Bonior.

Mr. Diggs with Mr. Murphy of Pennsylvania.

Mr. Flippo with Mr. Udall.

Mr. Koch with Mr. Michael O. Myers.

Mr. Moffett with Mr. Van Deerlin.

Mr. Nix with Mr. Roe.

Mr. Roybal with Mr. Sisk.

Mr. Lederer with Mr. Bonker.

Mr. DERWINSKI changed his vote from "nay" to "yea."

Messrs. ANDREWS of North Carolina, TRIBLE, METCALFE, and BRODHEAD changed their vote from "yea" to "nay."

So the motion was agreed to.

The result of the vote was announced as above recorded.

"BROTHER AGAINST BROTHER IN BLACK RHODESIA"

(Mr. ICHORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ICHORD. Mr. Speaker, on many different occasions I have warned this House that there persists a gross misunderstanding of the situation in Zimbabwe or Rhodesia, whichever you prefer, today. This misunderstanding has clouded our deliberations and has committed us to an improper course.

It is a common and erroneous belief that the blacks inside and outside Rhodesia are fighting against the alleged oppressive white minority rule of Prime Minister Ian Smith. A recent article appearing in the May 8 editorial of the Washington Post, titled "Brother Against Brother in Black Rhodesia," written by Smith Hempstone belies that myth and accurately portrays the situation as it exists in Rhodesia today. What Hempstone fails to point out in his article is that Joshua Kkoma, president of the Zimbabwe African People's Union, is Matabele, and as pointed out in the article the more martial Matabele have a history of warfare against the Karangas. The Karangas are a part of the Mashona, who constitute 80 percent of the total black population. It is this prospect of inevitable civil war and both white and black genocide which causes me such great concern.

There are those, including the present U.S. administration—Great Britain front, who would have you ignore the existing situation and accept black rule at any cost. While such an approach may improve United States-Great Britain diplomatic relations, it ingnores the reality that such a government would likely be constituted from an external minority and would be less representative of the black Rhodesian majority that the Smith government it replaced. Those who are willing to study the situation in Rhodesia, can not help but conclude that such a government would be equally, if not more, unacceptable to the Rhodesian, who is well aware of the potential for disaster.

Unfortunately, President Carter, Secretary Vance and Andy Young, in my opinion, have committed an egregious error when they acted on erroneous information furnished them by the American State Department, whose primary source of intelligence of the Zimbabwe-Rhodesian situation is British Intelligence. Can one, who knows the history of Rhodesian independence, envisage a more biased source of information than the British? I pray that President Carter wakes up to the facts of the situation before it is too late and I fear that the hour is growing late.

I commend the Hempstone article to you, in the hope that a firsthand account of the existing situation will facilitate understanding.

[From the Washington Post, May 8, 1977]

BROTHER AGAINST BROTHER IN BLACK RHODESIA

(By Smith Hempstone)

GWELO, RHODESIA.—"We are marked men," said one of the black cadet officers, "and for that reason we will fight very hard to win this war."

They are the first 11 Africans trained to be commissioned officers in the Rhodesian army and they do not have a very bright future if the black guerrillas win the four-year-old bush war.

Joshua Nkomo, president of the Zimbabwe African People's Union, and Robert Mugabe, leader of the Zimbabwe African National Union, both have threatened reprisals against the 20,000 Africans fighting for Prime Minister Ian Smith's white minority regime.

A guerrilla leaflet recently circulated in the "Repulse" military sector in southeast Rhodesia, bordering on Mozambique, was addressed to black soldiers and warned:

"If you carry the FN [a Belgian-made rifle, standard equipment in Rhodesia's security forces] in order to be Smith's dog, we are going to shoot you. . . . Turn your weapons on the whites."

Black officers obviously can expect special treatment from the guerrillas. And it required the personal intervention of the Rhodesian military commander-in-chief to arrange an interview with the 11 cadet training here in central Rhodesia. Even then, the cadets insisted that no names be used, no photographs taken, and that their course commander be present at their first-ever meeting with a reporter.

These men are not fresh-faced youngsters. Nine were sergeant-majors, two were color-sergeants. Their average age is between 33 and 38, and they have between 12 and 22 years' service behind them, including at least four years of combat. Of the 11, six belong to the Karanga linguistic group of the Mashona-speaking peoples.

TRADITIONS

The role of the Karangas, centered in southeastern Rhodesia, is one of the untold stories of the conflict.

The Karangas account for only 22 per cent of the African population. But if one includes the army, the para-military British South Africa Police, the armed district assistants of the Department of Internal Affairs and the Guard Force organized to defend the "protected villages" (similiar to Vietnam's "strategic hamlets"), close to 60 per cent of the 20,000 blacks fighting for the Smith regime are Karangas. Karangas also, however, play an important role among the 2,500 black guerrillas operating inside Rhodesia, plus the 10,000 encamped near its borders with Mozambique and Zambia.

Mugabe, perhaps the most charismatic of the guerrilla leaders, is a Karanga. So is "General" Josiah Tongogara, the tall military leader of ZANU's guerrillas, whose headquarters are in Mozambique.

Rex Nhongo, another prominent ZANU field commander and something of a rival to Tongogara, also is a Karanga. Indeed, a former guerrilla—white Rhodesians call them "terrs," short for terrorists, or "Freddies"—who recently surrendered to the security forces, told this reporter that "the entire high command of the ZANU army is Karanga, every one of them."

Before the Europeans arrived, the Karangas did not enjoy a martial reputation. In those days, war parties of the rival Matabele tribes

roamed at will across what later became Rhodesia, attacking all the Mashona-speaking people.

But the Karangas came under white domination relatively early, because their homeland is close to Salisbury and to Rhodesia's main line of communications with South Africa. The Europeans took some of their land, stopped the Matabele raiding and brought in missionaries and their medicines. The result: a Karanga baby boom and population pressure on the land. Volunteering for the army or the police provided relatively lucrative employment for the excess population.

Out of economic pressures grew a tradition with a life of its own. Sons, nephews and cousins proudly followed senior relatives into the Rhodesian African Rifles and the police.

Charumbira, a Karanga chief and Rhodesian senator, explains: "The pay is good (about $100 a month for a private), there will be others in his unit from his *kraal* and Karangas are proud to wear the uniform. It is a thing that we have done since first the Europeans came here." By contrast, the once dominant Matabeles do not serve in large numbers in Rhodesia's security forces—mainly because they don't like taking orders from Karanga non-coms.

INEVITABLE TENSIONS

But how does one account for the top-heavy Karanga influence in the ZANU guerrilla force?

A partial explanation, apparently, is the fact that Mugabe, Tongogara and Nhongo are Karangas. They were bound to draw fellow tribesmen into ZANU; despite the sophistication of some African leaders, the tribe remains the most important element in black politics in Rhodesia.

White Rhodesians point to other factors. Lt. Col. Michael Shute, who has spent 22 years with the African Rifles, put it this way: "When a 'terr' swaggers into a Karanga *kraal*, he cuts a romantic figure. He's got an AK-47 [a Russian assault rifle] and a couple of bandoliers of ammunition across his shoulders. He tells tall tales of his prowess in battle against the white man and promises a rosy future for those who join the movement. If he can't get into the security forces because his *kraal*-head has a feud on with the local sergeant-major, the prospect of being what they call a freedom fighter can look pretty good to a youngster whose alternative is herding cattle all day long."

Because Karanga lands are heavily infiltrated by guerrillas, families frequently are divided in their allegiance, with some members fighting for the security forces and others for the guerrillas.

Up around Mt. Darwin, in northern Rhodesia, this reporter met a 48-year-old district assistant whom one can call Dio Ncule (the Ncules are the Smiths of Karanga country). Ncule, a grandfather with 22 years of government service behind him (half in the army, half in the Department of Internal Affairs), has two sons. The eldest, Chance, is a 28-year-old sergeant-major in the African Rifles.

Ncule's second son, Washington, showed great promise as a student ("They told me he certainly would win a scholarship to the university, and might make a doctor or a barrister," Ncule says), but he was abducted by ZANU guerrillas in 1975 from a secondary school, along with more than 100 of his schoolmates, and whisked across the Mozambique border.

Ncule has heard nothing from or about Washington since. But if he is alive today, the odds are that Washington Ncule is a 16-year-old guerrilla (many are younger) who may find himself in combat one day against his sergeant-major brother or his district assistant father. Asked what he would do if such a situation arose, the father replied, "He would have to fight me, and I would have to fight him."

One of the cadet officers may one day face that problem. His younger brother has not been heard from since he went north to Zambia in search of a job several years ago, and chances are he is in the ZANU army.

"If I saw my brother with an AK-47," the cadet officer said in reply to a question, "I would kill him because, if I did not, he might kill me." The other cadets laughed and nodded their heads in agreement.

The situation, nevertheless, is a painful one for Africans in the security forces, and particularly for the first cadet officers. When they go on leave to their homes in the Tribal Trust Lands, where much of the guerrilla activity is concentrated, they do so in civilian clothes and without their weapons. Those not widely known to be members of the security forces tell inquisitive strangers that they have been working in Salisbury as clerks or truck drivers. If they are warned that there are guerrillas in the area, or that they have been singled out for killing, they do not stay at home long.

The families of long-serving soldiers are well known to the guerrillas. Almost without exception, the lives of their families have been threatened.

The Rhodesian command considered concentrating the families of such men in Salisbury or other secure areas, but was dissuaded by the men themselves. They seem to feel that separation of their families from the tribe, with all its interlocking loyalties, spiritual associations and built-in protections, would place them ultimately in even greater danger.

One cadet officer said: "My family, the living and the dead, have had their *kraal* on the same place in Gutu district since a time before the oldest man still alive can remember. We have been soldiers and police for nearly as long, and we will continue to be. The place for my wife and children is there, among my people."

CHANGING TIMES

The syllabus that the African cadet officers study is the same as that which confronts their white peers: administration, weapons, conventional warfare, guerrilla tactics and training procedures. The commissions and pay they will receive when they graduate this month will be the same as those of white officers.

They are the first 11 Africans trained to be commissioned officers in the Rhodesian army and they do not have a very bright future if the black guerrillas win the four-year-old bush war.

Their course commander, Maj. Chris Pearce, acknowledged that most of the cadets will be posted to the African Rifles rather than to predominantly white units, but he insisted, "That has nothing to do with race. Because of their knowledge of Mashona and their familiarity with the men who will be serving under them, that is where they can make the greatest contribution to the winning of the war."

Lt. Gen. Peter Walls, the Rhodesian commander-in-chief, concedes that it is fair to ask why 11 years of independence passed before Rhodesia could train its first class of black officers. "The political and legal climate was not right," he argues. "The law and practice of Rhodesia would have raised problems as to where black officers should be quartered, who they might command, what hospitals they should be sent to if wounded and what their social life should be."

As for the cadet officers, they express surprise and hurt when told that much of the world regards them as blacks fighting a white man's war. One said:

"The war is not one of blacks against whites. It is one of terrorists, who happen to be Africans, against the security forces, who happen to be Europeans and Africans. We are soldiers. We will fight anyone who comes to our country to make trouble. If white terrorists come, we will fight them, too, and the Europeans will help us."

IT IS TIME TO ABOLISH THE POSTAL SERVICE

(Mr. SKUBITZ asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SKUBITZ. Mr. Speaker, I am today introducing legislation to abolish the U.S. Postal Service and return the job of mail delivery to the Government under the direct control of the President and the Congress. The callous disregard that Postmaster General Bailar has consistently shown for the welfare and best interest of the people of rural America is, in large measure, the reason for my action.

Since the day the Postal Service was created by an act of Congress in 1971, a constant battle has ensued between the Members of the body who see delivery of the mail as a service—and a line of Postmasters General, including Mr. Bailar, who, come hell or high water, were bound and determined to compete with Exxon in showing a profit. Only last night, the newspaper trumpeted Mr. Bailar's second straight quarterly surplus. The Postmaster General is now pushing for even greater profits by eliminating Saturday delivery of mail, increasing the price of stamps to 15 or 16 cents, and resuming the closing of rural post offices at a rate of 300 a year.

As most of my colleagues are aware—I have always believed the delivery of mail was supposed to be a service provided by the Government for all the people of this country. That is the reason I voted against the Postal Reorganization Act which established the Postal Service—and that is why I offer this bill today.

The people of rural America are getting a minimal return for their tax dollars—as it is now. The only people from the Government they see on the farm are the postman and the OSHA inspector. Postmaster General Bailar is doing his best to relieve OSHA of any competition.

As a result of the Postal Service's continual rate increases United Parcel Service has completely taken away the once lucrative parcel post business. The Postal Service is currently following a path that will ultimately lead to the loss of second-class delivery. If it were not for laws prohibiting placing of first class mail in postal boxes many utility companies and corporations would be currently delivering their own billing statements.

When the Postal Reorganization Act was passed we justified our action by saying we were removing the Post Office from political influence. Whatever harm there may be in political influence is—I am sure—preferred by rural America to the alternative now being faced—no influence and no mail.

Quite frankly, under the old system we did have a certain amount of political meddling inherent in the system. But I will venture to say that there are few

Members of Congress who found their political input to be advantageous. For every opening for a postmaster we had 20 applicants—by appointing one out of the 20 to the job we ended up with the ill will of 19 political ingrates and one postmaster who could not help us politically anyway.

At least under the old system we had Post Office employees who could dispense money orders and stamps without treating patrons like they were a burden to the new system of bureaucratic cronyism.

I have decided to introduce my bill today—rather than wait for further provovation from the Postal Service which has already had 6 years to refine its operations. During those 6 years prices have gone up drastically—and service has gone down dramatically. I realize full well that my bill will require Federal funds to subsidize mail delivery—but I ask you what is wrong with that approach. Currently the Federal Government subsidizes education, health care, community development, sewers, rents, public works projects, farm products, and over half the free world with foreign aid.

Postmaster General Bailar's next logical step in his quest for profits is to propose the ultimate moneymaker—have the Postal Service pick up the mail and eliminate delivery altogether. Does that sound unlikely—about as unlikely as 16 cents stamps and no rural delivery sounded 6 years ago.

If this country is to return to the concept of service in the delivery of the mail—we must return control of the Post Office to the Government. My bill would provide for that change and insure the service to which the people of America are entitled.

OUR VANISHING FARMLAND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Vermont (Mr. JEFFORDS) is recognized for 15 minutes.

Mr. JEFFORDS. Mr. Speaker, today I am again reintroducing legislation dealing with a problem vital to our national long-range food producing capability. We cannot continue to lose more than 1 million acres of prime agricultural land yearly without it having a serious impact on our total food and fiber production. The scope of this problem goes well beyond the issue of diminishing farmland acreage. It has a direct relationship to the ability of our family farmers to own and operate farmland on which the price is constantly being bid higher and higher in value. It is quite conceivable that if this trend continues, much of our farmland could be owned by interests outside the agricultural sector.

Factors such as energy usage, availability of water, and the future cost of food to consumers all need to be examined closely since they all will be directly affected by the amount of available farmland.

A few weeks ago, the Boston Globe published an article dealing specifically with this issue and the impact it has had in New England. I would like to insert this article in the CONGRESSIONAL RECORD as part of my remarks today. It summarizes this problem very well:

OUR VANISHING FARMLAND

(By Charles Bonenti)

New England's farmland has been disappearing, and with it has gone the region's ability to feed itself. In the past 25 years we've lost almost 80 percent of our farms to taxes, development, and competition from growers elsewhere. We've become, as one Connecticut official put it, "the Bangladesh of America," dependent on other parts of the country for nearly 85 percent of what we eat.

It means we not only pay 6 percent more than the national average for food, but have little if any cushion against shortages.

We produce most of our own dairy products and contribute a hefty share of the nation's potatoes, cranberries, and maple syrup, but for red meat, grain, most vegetables, and other diet staples we rely on sources hundreds and even thousands of miles away.

If you live in Boston, for example, you probably drank Florida orange juice for breakfast this morning, had Iowa bacon with your eggs from Maine, poured milk from a local dairy into your Brazilian coffee, and munched a slice of toast made from Midwest grain.

If you had soup for lunch, the vegetables in it were probably grown in California, and if you're having steak tonight, you can bet it's from Nebraska.

If a major strike or natural disaster should halt the flow of these products into New England, even for a period of weeks, we would face a regional food shortage of monumental proportions.

We've already had a taste of shortages in recent years. The 1973 truckers' strike, for example, drained supermarket meat counters of beef, lamb, and pork, leaving many of us to eat chicken, fish, and other meatless meals for weeks. In 1973, a severe Christmas ice storm crippled food deliveries to major cities in Connecticut, forcing families there to stretch household stocks as best they could. The loss of 50 percent of Florida's citrus crop this winter, one of the coldest winters on record, the California drought, and the natural gas shortage are already being felt in higher prices and shortages in the North.

Incidents like these, coupled with a growing public concern over rising energy and food prices, are forcing government officials to take a hard look at longstanding land-use practices that have allowed farms to be gobbled up for housing, highways, and supermarkets. Insurance against future shortages would be to preserve whatever farmland remains in New England.

By any estimate, the loss of agricultural land in the region over the past 25 years has been alarming.

In 1950, according to the US Department of Agriculture, New England had a total of 126,000 farms. Today there are only 27,280. There were 13.8 million acres in agriculture then. There are 5.4 million acres today. Over the same period, our population increased about one-third, from 9.4 million to more than 12 million.

The farms we have left tend to be bigger—an average of 198 acres compared to 109 in 1950—more productive and more specialized than those 25 years ago. Dairy, broiler, and cranberry production are actually up, while beef, potatoes and maple syrup have declined.

The productivity we have achieved, however, depends on modern farming methods that consume enormous amounts of fossil fuel energy. And as fewer farmers are called upon to feed more people on less land, that dependence on dwindling and costly fossil fuels puts us in a precarious balance.

What economists and agriculture experts are asking is how much longer we can maintain that balance, not just in New England, but nationwide. It would take 10 times the energy reserves we have now to double the yield of our farms. The alternative to energy-intensive farming is to bring more arable land into production and to rely more on manpower than on machinery. Given the land and energy squeeze we're already facing in New England, either choice would demand tremendous public sacrifice. Our best hope, many experts feel, lies in finding alternatives to wasteful land-use practices that have allowed good farmland to be paved with blacktop, wasteful technology that has driven up farm costs and drained energy reserves, and food-pricing policies that farmers say are putting them out of business.

Agriculture already accounts for 3.5 percent of US energy consumption. As an industry, it ranks third in demand for fossil fuels behind steelmaking and petroleum refining. Fossil fuels go into all sorts of agricultural activities from the 12.8 million tons of fertilizer spread annually over 337 million acres of US farmland to the 6 million tractors farmers use to till the soil, spread that fertilizer, plant their crops, and harvest them. Fossil fuels go into the making of pesticides and herbicides and into the planes and equipment that spray pest and weed-killers over the fields. Farmers rely on electricity to pump water for livestock and irrigation, to run milking machines, and to control the temperatures in poultry sheds and incubators.

And we consumers depend on oil and electricity for the processing, packaging, and shipment of food to our local supermarkets.

Agriculture in the United States has become so dependent on abundant fossil fuel energy that if petroleum and gas supplies should be severely cut short, modern farming as we know it would collapse.

A report prepared by the Stanford Research Institute for the Federal Office of Civil Defense predicts that without the heavy applications of fertilizers now being used, the annual US wheat and corn harvest could drop about 45 percent in one year, leading to widespread slaughter of livestock dependent on these feed grains. And without petroleum, the report goes on, none of our major food or feed crops, which are all mechanically planted and cultivated, could be harvested under present methods.

The report was compiled in 1969 to show the potential effect of a nuclear attack on agricultural production, but its statistics give a chilling picture, nonetheless, of how far removed farming is today from the natural cycles of ecology.

It got that way because modern farming is caught in a double squeeze; a squeeze to get more productivity out of a fixed amount of land and a squeeze to cut costs because farmers cannot set the price of food they sell.

Farming is not like clothing or automobile manufacturing.

People can be persuaded to buy two cars, three television sets, and closets full of clothes, even if they don't really need them to survive. But the demand for food is constant. It doesn't rise or fall with the supply. People need food to stay alive and they will do almost anything to get it when it is scarce. In times like that, prices rise. When food is abundant on the other hand, people won't buy more than they can eat, so prices fall.

The rise and fall in prices during periods of scarcity and abundance has historically created "boom and bust" cycles for the farmer—years of profit followed by years of loss.

To protect the farmer from these disruptive ups and downs and at the same time keep food prices relatively stable for consumers, the Federal government has long pursued a policy of agricultural price supports, paying farmers not to produce, guar-

anteeing minimum crop prices, and buying surplus yield for national stockpiles.

But while Federal subsidies have helped to stabilize yearly income for farmers, they've also tended, along with other market forces, to establish ceilings on what they can get for their produce. Despite what many consumers think, two-thirds of the price of food is made up of marketing costs. And it is these costs that have risen steadily over the years.

Since no single farmer can affect the price he gets on the competitive market by increasing or lowering his level of production, he tries to widen his margin of profit by cutting costs. And over the years, cutting costs has meant investing in labor-saving devices or in new technology that increases yield per acre. It means buying livestock feed rather than tying up expensive land to grow it, investing in machinery to replace costly hired labor, using store-bought fertilizer instead of collecting and spreading manure, and buying seeds rather than saving from the farm crop.

Yet even with these changes, farm production costs—becase of inflation, the price of land, and the price of energy—have risen from 50 percent of gross farm income before World War II to more than 70 percent today. It's a cost-price squeeze that only the most efficient, and necessarily large-scale farms can survive.

In an urban region like New England, all these pressures are particularly acute, not only because land is more expensive than it is in other parts of the country, but also because farmers here are hard-pressed to compete with growers elsewhere who can spread the same costs over much bigger farm operations.

Except in specialized activities like dairying and potato-growing, where freshness and bulk make closeness to the market important, New England farmers are at a disadvantage.

What state officials in the region are looking at now are ways to offset that disadvantage through tax relief, the abolition of rail rates that discriminate against New England in the shipment of feed grain, the encouragement of diversified farming, and the opening of new markets. All these measures would help make farming more profitable.

More importantly, they are looking at ways to reverse longstanding land-use practices that have played a big part in creating New England's food vulnerability.

Farming in New England has never been easy. Even in the best of times, New England farmers have had to cope with a short growing season and land that, outside of valley regions like the Connecticut, Merrimack, and Champlain, runs both hilly and rocky. Yet despite those drawbacks, farming boomed here during the 18th Century and spread rapidly throughout the region until two developments around 1810 conspired to blunt its growth and diversity.

The first was the opening of land for settlement in the Ohio Valley and the second was the rise of textile manufacturing in the Northeast. The westward migration sapped New England of its best young farmers and the mills put the region on the path toward urbanization. New England shifted from a food-producing region to a manufacturing, food-consuming one. And it has remained that way.

We are an urban region with cities melting into one another from Portland to Boston to Providence and down the Connecticut coast. As our cities have grown, they pushed inland, consuming farms for suburbs and industry and driving up the price of remaining open land. So many uses are competing for the same space that land has become a commodity to be bought and sold for whatever brings the highest price. In an urban region like New England, housing, jobs, and places to shop are more in demand than farmland.

Even our land-use regulations reflect urban priorities. They are geared more toward protecting the population against pollution and the homeowner against property devaluation than toward saving land for its best productive use. Where open space has been conserved by popular desire, it has been mainly for recreational purposes.

Now the prospect of food and energy shortages is forcing government officials to rethink a lot these land-use policies.

Massachusetts, Connecticut, and Vermont have already compiled studies on why their farmland has declined and what can be done about it. New Hampshire, Maine, and Rhode Island are starting to take a look.

The remedies that are being proposed are as complex as the problems and demand dramatic changes in the way in which we think of land ownership.

All the New England states now have legislation that offers some sort of tax relief to farmers. The laws allow farmland to be assessed at its agricultural value rather than its potential value for housing or other development. This can mean a difference in assessment of say $300 an acre (farm value) and $1800 (development value) an acre, depending on where the land is located and how rich and flat it is. In most cases, the farmer has to apply for the lower agricultural assessment each year and the decision to grant it rests with local authorities. Connecticut, with the strictest law, requires assessors to value farmland by its agricultural use, while Vermont, the most permissive, allows farmers to negotiate tax-stabilization agreements with local authorities.

Yet these tax-relief measures have been only moderately successful, state officials say. In many cases, farmers are either unaware of them or mistrust them and assessors either do not understand them or are loath to allow reductions. In Massachusetts, for example, only 20 percent of the state's farmers have taken advantage of tax-relief laws.

"The trouble with these laws," says Massachusetts Agriculture Commissioner Frederic Winthrop, "is that they don't guarantee the land will remain in farming."

More dramatic programs are being considered that would do just that.

Massachusetts and Connecticut each have bills coming before their legislatures this year that would allow state governments to buy development rights, or easements, over prime farmland

It means that in return for saying how the land can be used, the state would pay the farmer the difference between the value of his land for agriculture and its potential value for housing or other development. Vermont already has a law like this on its books, but no money has been appropriated to buy land rights. New Hampshire may begin studying the approach this year, and Maine and Rhode Island are thinking about it.

What the states want to do is remove the threat that farmers will sell their land for development by giving them a cash incentive to keep it in agriculture. The amount of money to be paid would depend on the quality of the land and its location.

What has stalled these programs so far—Connecticut has been trying for two years to get a bill through the Legislature—is the vast amount of money that has to be raised to buy these rights. Connecticut's program calls for a $500 million bond issue to buy rights over 325,000 of the state's 510,000 acres of farmland. It has been proposed that the bond issue be paid off by imposing a one percent tax on all real estate transfers. Officials estimate the tax would raise $25 million a year. So far, even though proponents have argued the tax would hit real estate speculators more than the average taxpayer, the legislature has turned thumbs down.

In Massachusetts, a bill asking for a $5 million bond issue to start a pilot program in buying development rights failed to come up for legislative consideration last year. Comr. Withrop sees its chances of passage this year as 50-50.

"There's tremendous support for it in theory," he says, "but not in expense."

Money is not the only obstacle advocates of these development rights proposals have to overcome. The belief that a landowner can do what he wants with his property is one that runs deep in American culture. Even if farmers are promised compensation, many as hearings in Connecticut have shown, are not eager to give up what they consider a fundamental right to choose. They also have voiced fears that they won't be allowed to subdivide their land when they want to pass it on to their children and that they'll find it harder to borrow money if the cash value of their property is diminished.

Conservationists argue, in answer, that we can no longer consider land an inexhaustible resource to do with as we please; that we must see it is used in ways that benefit the most people. Many states already have environmental regulations that prevent property owners from creating pollution that would jeopardize public health. The purchase of development rights on farms, proponents say, has the same legal justification. By conserving fertile land for its most productive use, we are protecting the public welfare by safeguarding the food supply.

Advocates are also telling farmers that they stand to gain by having extra money, that would be paid as compensation, to invest in property improvements. They say, too, that as the price of farm land is brought down, because of restrictions on its use, young people who cannot afford to do so now will be able to go into farming.

And government officials in Connecticut and Massachusetts maintain that programs to protect agricultural land will enhance, rather than hurt, the farmer's borrowing power.

It is like a state vote of confidence in the future of agriculture, says Massachusetts Comr. Winthrop.

The drive to preserve agricultural land and create a cushion against food shortages has, in some ways, drawn the New England states closer together. Officials are beginning to see their states' problems as problems that are common to the region and, in some cases, they are looking at regional solutions.

The six states, under a grant from the New England Regional Commission, are already looking into the possibility of establishing grain storage warehouses within the region to build up reserves against price hikes and shortages. And the New England Grain and Feed Council, with the backing of governors in each state, has asked the US Interstate Commerce Commission to investigate current railroad rate structures that make it $8 to $12 more costly per ton to ship grain from the Midwest to New England than it is to ship from the Midwest to the southeastern states.

In addition, agriculture schools and organizations like the New England People's Cooperative and the Natural Foods and Farming Association are looking into ways to cut down on the enormous consumption of energy by modern farming.

Among the proposals are ones to use more animal wastes in the place of conventional fertilizers, to reduce the number of times farmers till their fields, and to devote more arable land to growing food for people rather than silage for animals.

It has been estimated that we can get 1.3 barrels of oil out of each ton of dry organic waste that, in many cases now, is simply dumped into sewage treatment plants. And studies indicate that farmers could save 6 percent of the energy they use by planting and fertilizing in untilled soil rather than tilling, plowing, planting and applying weed controls in separate operations.

Another way to cut down on the energy demand for farming, experts say, would be if people substituted more plant protein in

their diets for grain-fed meat. Right now, 70 percent of our protein comes from animals and projections are that we will need 60 to 180 percent more fuel energy by the year 2000 to maintain that kind of diet.

Yet even while state officials and agriculture experts see the energy crisis, the loss of farmland, and the increasing demand for food as serious regional problems, some believe the problems will create their own solutions.

THE HARD FACTS IN NEW ENGLAND

Number of farms

	1950	1977
Connecticut	20,000	4,200
Maine	35,600	7,600
Massachusetts	29,100	5,600
New Hampshire	15,800	2,600
Rhode Island	3,400	680
Vermont	22,100	6,600
Total	126,000	27,280

Acres in farming

	1950	1977
Connecticut	1,560,000	510,000
Maine	4,450,000	1,710,000
Massachusetts	1,860,000	700,000
New Hampshire	1,850,000	560,000
Rhode Island	250,000	65,000
Vermont	3,800,000	1,800,000
Total	13,770,000	5,405,000

ELVIS PRESLEY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. DUNCAN) is recognized for 10 minutes.

Mr. DUNCAN of Tennessee. Mr. Speaker, an internationally famous fellow Tennessean is coming to Washington this week, Mr. Elvis Presley.

In view of unfounded rumors which comes with the territory in the entertainment industry, I would like to offer a few observations to the Congress on Elvis.

First, as Tennesseans we are proud of the Horatio Alger, poor-boy-makes-good story which Elvis represents. That is the essence of the American dream which sets our Nation apart from the rest of the world.

As a Tennessean I am proud of the positive image Elvis has created for our State by conducting his career with the one word that sums up this Tennessean, class.

Although he refuses to publicize it, Elvis, in his own quiet way has dedicated his good fortune to helping others, whether it is helping a children's hospital that is in need or extending a helping hand to a family facing some tragedy.

The character of this man is also revealed by the gospel songs which have influenced his life and have been the foundation of his singing career.

The church he built and dedicated to his mother tells more about the man than printed words.

Elvis and his manager, Col. Tom Parker, have been the best ambassadors for Tennessee in the history of our State. All of us in Tennessee are proud that one of our own has become the most outstanding entertainer in his generation, Elvis Presley.

ASPIN AMENDMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FISH) is recognized for 5 minutes.

Mr. FISH. Mr. Speaker, due to personal obligations, for which I had a leave of absence, I was not able to be present for the consideration and vote on H.R. 6810, the Countercyclical Antirecession Assistance to State and Local Governments Act, Friday, May 13.

If I had been present for the vote, I would have voted against the Aspin amendment to this legislation, which would have changed the allocation formula from the unemployment rate to each specific area's tax effort. This would have had an adverse effect on New York State by reducing its allocation. In dollars, it would have meant a reduction of $19 million for the State while for the 25th Congressional District, which I represent, would have lost $500,000. I am very pleased to see that the majority of my colleagues in the House decided to defeat this amendment.

LIBRARY OF CONGRESS REPORT ON EXPERIENCE OF WESTERN INDUSTRIAL COUNTRIES WITH GASOLINE TAXES AS A MEANS OF REDUCING DEMAND FOR GASOLINE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, in preparation for consideration by the Ways and Means Committee of a standby gasoline tax and in connection with my work as chairman of the Ways and Means Trade Subcommittee, I asked the Library of Congress to provide me with a report on the experience of Western industrial countries with gasoline taxes as a means of reducing demand for gasoline.

The Library notes:

In most Western industrial countries, high gasoline taxes have resulted in consumer gasoline prices that are considerably higher than in the United States.

The Library states that—

Two kinds of evidence suggest that, as a short-run conservation measure, gasoline taxes have had limited success.

The Library cited one 1975 study by Data Resources, Inc., which estimated that—

Short-run and long-run price elasticities for gasoline in the countries of the Organization for Economic Cooperation and Development (including the United States . . .) are —.070 and —.204 respectively. If this estimate is accurate, a 10% increase in the price of gasoline would result in a .7% decrease in gasoline consumption in the short run and a 2% decrease over time. . . . The DRI estimates suggest that increases in the price of gasoline have a relatively small impact on consumption.

The administration's proposed gasoline taxes will have very little effect on reducing gasoline consumption. We must rely on the accelerated development of more efficient automobiles, more adequate mass transit, and a system of import controls and allocations.

It is only through these types of actions that we can hope to curb the drain of our Nation's resources to pay for imported oil.

The Library of Congress report follows:

CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., May 13, 1977.

To: The Honorable Charles Vanik.
From: Economics Division.
Subject: Experience of Western industrial countries with gasoline taxes as a means of reducing demand for gasoline.

A number of governments have responded to the energy crisis by raising the prices of gasoline as a means of hopefully reducing consumption. Some countries have also used gasoline taxes, both before and after the rapid world price increases for crude oil, as an important means of raising revenue. In most Western industrial countries, high gasoline taxes have resulted in consumer gasoline prices that are considerably higher than in the United States. Table 1 shows gasoline prices in member countries of the International Energy Agency at the end of 1975 and the percent of the prices accounted for by taxes. Among the member countries of the IEA, the United States had the lowest gasoline taxes, 20.5% of the retail price, while Italy had the highest with 64.6%.

TABLE 1.—GASOLINE PRICES IN INTERNATIONAL ENERGY AGENCY MEMBER COUNTRIES
[As of December 1975]

Country	Retail price (U.S. cents per liter)	Taxes as percent of price
Canada	18.6	39.4
United States	[2] 15.6	20.5
Japan	[2] 36.7	30.8
New Zealand	27.4–28.9	35.8/33.9
Austria	[1] 31.3–35.1	48.5/57.4
Belgium	[1] 35.9–38.1	62.2/60.1
Luxembourg		
Denmark	[2] 37.2	46.0
Germany	[1] 32.5–34.9	54.8/51.0
Ireland	[1] 32.6–33.5	50.0/48.6
Italy	[2] 46.1	64.6
Netherlands	[1] 37.7–38.4	59.7/58.6
Norway	[2] 36.6	52.7
Spain	31.8–43.5	58.8/43.0
Sweden	34.2–35.6	55.0/52.8
Switzerland	[2] 37.8	57.7
Turkey	18.5–22.8	51.7/56.1
United Kingdom	[1] 30.1–30.6	52.7
IEA maximum	[2] 46.1	
IEA minimum	[2] 15.6	
IEA average	[2] 32.4

Source: Organization for Economic Cooperation and Development Energy Conservation in the International Energy Agency: 1976 Review, pp. 12–13.

Two kinds of evidence suggest that, as a short-run conservation measure, gasoline taxes have had limited success. Casual observations of consumer behavior and total gasoline consumption in those countries which have high gasoline taxes represent one kind of evidence. Such observations, which have been frequently reported in the press,[1] suggest that high gasoline prices have not markedly reduced driving in those countries.

Another kind of evidence is the estimated price elasticity for gasoline. (Price elasticity shows the percentage change in demand resulting from changes in prices.) Although they vary considerably, most estimates suggest that the price elasticity for gasoline is very low—i.e. that increases in the price of gasoline result in relatively small decreases in quantity demanded. One estimate, by Data Resources, Inc. in 1975, is that short-run and long-run price elasticities for gasoline in the countries of the Organization for Economic Co-operation and Development (including the United States and most other Western industrial countries) are —.070 and —.204

[1] See, for example *Oil Daily*, March 23, 1976, p. 8, "Raising prices does not result in reduced consumption"; *Platt's Oilgram News Service*, December 30, 1976, p. 3, "Swiss motorists indifferent to gas prices"; *Washington Post*, April 24, 1977, pp. 1, 4, "Europeans give high marks to energy programs."

respectively.[2] If this estimate is accurate, a 10% increase in the price of gasoline would result in a .7% decrease in gasoline consumption in the short run and a 2% decrease over time. Using this estimate of the price elasticity of gasoline, Data Resources estimated the change in demand for gasoline in 1980 for Europe and Japan resulting from alternative crude oil prices in 1976 of $10, $20, and $30 a barrel. (See Table 2.) Increases in gasoline taxes would affect gasoline prices and demand in a similar manner. The DRI estimates suggest that increases in the price of gasoline have a relatively small impact on consumption.

HEARING BEFORE THE SUBCOMMITTEE ON CRIME OF THE HOUSE COMMITTEE ON THE JUDICIARY ON THE SEXUAL EXPLOITATION OF CHILDREN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CONYERS) is recognized for 5 minutes.

Mr. CONYERS. Mr. Speaker, I am pleased to announce that the Subcommittee on Crime of the House Committee on the Judiciary will hold hearings on Monday, May 23, at 10 a.m. and Wednesday, May 25, at 9 a.m. in room 2237 Rayburn House Office Building on the issue of the sexual abuse and exploitation of children.

The problem is one which at least 110 Members of Congress have attempted to rectify by cosponsoring bills that would prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation. The subcommittee members will be investigating the scope of the problem and the utility of legislative remedies.

We expect testimony on the seriousness of the matter from child psychiatrists, lawyers, local enforcement officers and people knowledgeable about the distribution of pornography on the first day of hearings. Wednesday, we will hear from the administration, State and local law enforcement authorities, and the motion picture industry on the need for Federal legislation.

There will be hearings at a later date on the various specific bills of Members of Congress and possibly joint hearings with other committees with overlapping jurisdiction.

Those wishing to testify or submit a statement for the record should address their requests to the Committee on the Judiciary, 2137 Rayburn House Office Building, Washington, D.C. 20515.

ST. LOUIS TO LEAD LINDBERGH CELEBRATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Missouri (Mr. YOUNG) is recognized for 5 minutes.

Mr. YOUNG of Missouri. Mr. Speaker, this weekend marks the 50th anniversary of the heroic, historic flight of Charles A. Lindbergh across the Atlantic Ocean.

Volumes have been written about that flight and the brave man who made it. But I would like to add a word or two about the city that sponsored that flight, the airport where Lindbergh spent many of his early flying years and the great celebration planned for this weekend.

As you all know, the name of the fine little plane that carried Lindbergh across the Atlantic was "The Spirit of St. Louis." It was named in appreciation of the good businessmen of the St. Louis area who had the faith and the foresight to raise the money for the flight and to back "Lucky Lindy" to the utmost in the trying days before he took off.

That same spirit is still strong in the city and county of St. Louis today. It is the spirit that has moved St. Louisans to work hard to keep an aviation tradition alive, a tradition that stretches back years before Lindbergh's heyday.

You might recall that in the months that Lindbergh was nothing more than an air mail pilot his flying base was a dusty little spot in my district known as Lambert Field. In the 50 years since Lindy's famous flight, that same airport has been constantly expanded and improved into what is now a great facility—Lambert-St. Louis International Airport.

The people of St. Louis have had to fight to keep that great Lambert tradition alive. In the last few years, there were many proposals that Lambert be virtually abandoned in favor of a new airport elsewhere. But just 2 months ago, Transportation Secretary Brock Adams helped keep a great tradition alive by announcing a decision to retain Lambert as the major airport in the area.

That was an especially fitting decision in the 50th year after Lindbergh's flight in the *Spirit of St. Louis*, which landed at Lambert Field on the way to Europe. And in the coming years, the people of St. Louis are going to reinforce that tradition by making Lambert one of the great airports of the United States.

The Lambert decision also makes it especially appropriate that St. Louis should have a big celebration this weekend to commemorate the 50th anniversary of the Lindbergh flight.

A parade, a massive aviation awards dinner at the new St. Louis Gateway Convention and Exhibition Center, and a colorful air show and fireworks display on the riverfront will highlight a celebration that St. Louisans have been working for months to prepare.

The honorary cochairman of the celebration is a man who has worked for the cause of aviation for more than three decades, a man who served as the first Secretary of the Air Force and who served four terms as a great U.S. Senator from Missouri before his retirement in December—the Honorable Stuart Symington.

Among the many groups that deserve special recognition for their efforts to organize this celebration are: the St. Louis Regional Commerce and Growth Association, which established the "Spirit of St. Louis" committee; the St. Louis Globe-Democrat, which is sponsoring the parade and publishing a special section devoted to Lindbergh; and the Famous-Barr Co., which is sponsoring the riverfront display.

Because of the hard work and combined efforts of these organizations and of thousands of other persons, St. Louis will be—as it should be—the center of attraction in America's celebration of the anniversary of this event.

FORTY MEMBERS SIGN LETTER TO BREZHNEV ON THE CASE OF GUNARS RODE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, Gunars Rode is a Latvian political prisoner currently serving a 15-year sentence in Vladimir prison near Moscow on his conviction in 1962 of "nationalism and anti-Soviet agitation" because of his participation in an informal student group named the Baltic Federation. According to the well-known Soviet dissident Vladimir Bukovsky, the group did nothing more than discuss cultural autonomy and human rights for Estonians, Latvians, and Lithuanians.

The Soviet Government feels especially threatened by Mr. Rode because he has

doggedly insisted upon his innocence despite harsh treatment and his serious physical condition. His prison term expires on May 20 of this year, but according to Samizdat, the underground chronicle of current events, the Soviet authorities may bring new charges against Mr. Rode, resulting in an additional prison term, because of his "unrepentant view" on human rights and his desire for Baltic self-determination.

Bukovsky, who spoke to Rode in September 1976, believes that his health is poor and getting worse and is concerned that he will not live through another prison term, although he notes that Rode's inner resolve remains inflexible.

I am pleased to report that 38 of my colleagues have joined me in signing a letter to General Secretary Leonid Brezhnev expressing our concern for Mr. Rode and urging that he be released when his term expires this Friday.

The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 16, 1977.

HON. LEONID BREZHNEV,
General Secretary of C.T.S.U., The Kremlin, Moscow, Russia.

DEAR MR. SECRETARY: We, the undersigned Members of Congress, are writing to express our concern for Gunars Rode, a Latvian sentenced to 15 years in prison in 1962 for "nationalism and anti-Soviet agitation" because of his membership and participation in an informal student group known as the Baltic Federation, which we understand did nothing more than meet to discuss problems of cultural autonomy and human rights for Estonians, Latvians, and Lithuanians. Mr. Rode, whose sentence expires on May 20 of this year, was not permitted until last summer to see the 1962 court decision accusing him of "having poisoned drinking water, having gathered arms for an armed uprising, and of an intention to start a nuclear explosion or even war that would threaten all of Eastern Europe," charges which appear to have no basis in fact.

It has come to our attention that the Soviet Government may bring new charges against Mr. Rode which would result in another prison term after the current one expires on May 20, because of his persistent assertion of his innocence. When it was reportedly suggested by Soviet authorities in early 1976, for example, that he appeal for clemency, Mr. Rode refused on principle, because to request clemency would be to admit guilt to crimes he never committed.

Because Mr. Rode is gravely ill, he may not survive another prison term; therefore, we appeal to you on humanitarian grounds to release him when his term ends this month. This would indicate that the Soviet Union takes seriously the human-rights provisions of the Helsinki Acord.

Sincerely,

Edward I. Koch, Benjamin S. Rosenthal, John J. Rhodes, Millicent Fenwick, Herman Badillo, Stephen J. Solarz, Jack F. Kemp, Christopher J. Dodd, Frank Annunzio, Lester L. Wolff, Charles B. Rangel, Dante B. Fascell, James H. Scheuer, Allen E. Ertel, Austin J. Murphy, Theodore S. Weiss.

James F. Florio, Joshua Eilberg, Robert J. Lagomarsino, Philip M. Crane, Joe Moakley, Gladys Noon Spellman, Richard L. Ottinger, Bruce F. Vento, Paul Simon, Charles E. Grassley, Henry J. Hyde, Garry Brown.

LEGISLATION NEEDED TO CONSOLIDATE OUR CIVIL DEFENSE EFFORT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. EVANS) is recognized for 5 minutes.

Mr. EVANS of Indiana. Mr. Speaker, I would like to bring to the attention of my colleagues a praiseworthy editorial in the Indianapolis News on the importance of our Nation's civil defense effort and the necessity of consolidating our emergency preparedness programs to make them more efficient in expending our tax dollars and more effective in meeting the requirements of our citizens.

As a member of the Joint Committee on Defense Production over the past 2 years, I am very aware of the bearing these programs have on the safety and well-being of the American people. Many experts have testified to the importance of consolidating our emergency preparedness programs, both natural and manmade disasters, to make them responsive to our needs.

Legislation to streamline the three existing Federal agencies responsible for defense preparedness into one independent agency will go a long way to meet our requirements. It will certainly improve program management, insure local and State input into emergency preparedness programs and policies, and will expedite assistance and relief money to stricken areas.

I urge the adoption of the legislation as introduced by members of the Joint Committee on Defense Production, and I certainly hope my colleagues will take a moment to read this editorial.

[From the Indianapolis News, May 10, 1977]

ENDING "ALPHABET SOUP"

What the Federal government has done to the nation's civil defense effort is bureaucratic mismanagement at its worst.

A comprehensive congressional study has revealed that the responsibility for emergency preparedness is scattered among 175 agencies, committees and groups.

Civil defense is now a "many-headed monstrosity," "alphabet soup," "politicizing of the preparedness effort"—to use only a few of the terms from the report.

Preparation against nuclear war is commonly thought of as the major thrust of civil defense. In reality, however, it is deeply involved in the daily threat of all types of natural disasters, including tornadoes, fires and floods. In these latter categories, some agencies have records of outstanding performance under difficult circumstances.

There is strong argument in the congressional study, however, for revamping and consolidating the emergency preparedness program along all lines. Part of the pressure for such improvements grows out of the news that the Soviet Union has established an internal defense system as intensive and as efficient as its external military machine. It is no secret that the Soviets have established a model system, sparing no efforts or resources.

Given the realities of Soviet expansionism, civil defense assumes a position of high priority. There is no excuse for weaknesses in areas in which the American genius for volunteer action can be tapped. What has been lacking, as the report highlights, is central leadership.

Typical of the lack of coherent planning is the story of one coordinator who was told by the Defense Supply Agency, one of the so-called responsible agencies, that its plans called for emergency relocation of certain Washington staff to a Richmond, Va., facility—the location designated by the Defense Civil Preparedness Agency as "a high risk area."

Similar foul-ups have been reported in connection with obtaining aid during natural disasters. Local officials have been confused by endless red tape, stalling and buck-passing.

Congress has approved a 50 percent increase in the civil defense budget for fiscal 1978, bringing the total appropriation to $134.8 million.

With these kinds of funds available it is more urgent than ever to bring this important activity into some kind of central agency and erase at least part of the confusion resulting, as the study puts it, from 30 years of "alphabet soup."

SENATOR RUSSELL B. LONG—"THE CLEVEREST SENATOR"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. WAGGONNER) is recognized for 5 minutes.

Mr. WAGGONNER. Mr. Speaker, Louisiana is noted for its abundance of natural resources. While other States may claim some of the same resources, we have one resource we treasure and are proud to share with the rest of the Nation. That great Louisiana resource is the senior Senator from our State, Senator RUSSELL B. LONG.

For 28 years Senator LONG has served his State and Nation with honor and distinction in the Senate, just as both his father and mother had done before him. For the Longs of Louisiana, public service is not only a family tradition, it is a family obligation.

We are proud of our Senator and the mark he has made on some of the most far-reaching legislation of our generation. As chairman of the Senate Finance Committee RUSSELL LONG has been able to influence legislation to aid the poor and disabled, to revitalize our cities, to simplify the complicated tax system, and to preserve the free enterprise system.

We in Louisiana have known and respected his abilities as a strong leader for many years, and we are willing to continue sharing him as a national leader as we have been doing.

In the current issue of Newsweek magazine, Pulitzer Prize-winning columnist, George F. Will, presents a profile of the Senator which captures an accurate glimpse of his dynamic personality and quiet strength. We who have known RUSSELL over the years realize the accuracy of Mr. Will's description:

When aroused he resembles a hurricane coming ashore among the pines of Plaquemines Parish. But power means not needing to raise your voice. Anyway, Long need not outshout people he can outthink.

At a time when the country vitally needs energy, we of Louisiana are proud to be able to offer the tremendous energy of our "hurricane," Senator RUSSELL B. LONG.

I recommend Mr. Will's column, "The Cleverest Senator," which follows my remarks, to our colleagues. He is my colleague and a personal friend.

THE CLEVEREST SENATOR

(By George F. Will)

May is the month of buses in Washington, buses bringing boys and girls to see senators and other monuments. Bumper-to-bumper

buses form a yellow and silver snake at the foot of Capitol Hill. On a gray morning after a dawn downpour last week the buses were disgorging their tumbling cargo while Sen. Russell Long, a Louisiana Democrat, was nearby, tucking into bacon and eggs in the senators' dining room. For the boys and girls a glimpse of him would be a glimpse of a large chunk of government, and a slice of the century.

First there is the shock of recognition. You are struck by the sovereignty of chromosomes. The cherubic jowliness, the shrewdness, the quickness, intelligence and humor, the darting eyes and restless energy: an assassin shot Huey Long 42 years ago but his genetic code goes marching on.

Russell Long's early memories of Washington are of getting lost in the lower corridors of the Capitol, while Daddy was upstairs raising Cain. He became a senator when the Constitution let him, when he was 30, in 1948. It will be at least 1992 before he removes himself from his office in the Richard Brevard Russell Office Building. Then he will have spent 44 of his 74 years in the Senate (Huey Long lived only 42 years) and will have passed Georgia's late Senator Russell as the longest serving man of first-rate powers in our time.

A HURRICANE COMING ASHORE

Politics often is a family affair, and not just for Adamses, Rockefellers and Kennedys. In 1931 Richard Russell was sworn in as governor by his father, Georgia's Chief Justice. Byrds were in seventeenth-century Virginia politics and Harry Byrd Jr. is Long's colleague on the Finance Committee, which Harry Byrd Sr. chaired before Long.

Russell Long's Uncle Earl was the most novel governor in postwar America. He had Flaubert's flair for bons mots ("Jimmie Davis loves money like a hog loves slop") and a gift for concision, as when he described an uncle's death: "He got drunk and pulled a man out of bed and got into bed with the man's wife, and the man got mad and shot my poor uncle, and he died." Earl's downfall was loose living and the premature declaration that "niggers is people too."

Earl was made possible by Huey, bless him. Huey dominated Louisiana more thoroughly than anyone has dominated any other state. He was a master of the politics of class antagonism. He broke the state to his saddle, yanked the cinch tight, slammed his spurs into its flanks, and set about the business of government, as he understood it: helping friends and hurting enemies.

Russell is the least Technicolor Long. When aroused he resembles a hurricane coming ashore among the pines of Plaquemines Parish. But power means not needing to raise your voice. Anyway, Long need not outshout people he can outthink. He is one of those legislators whose eminence does not carry to the country. He is less well known than most members of the Foreign Relations Committee, the most publicized and least consequential Senate committee. He may be the cleverest senator and his Finance Committee has more than its share of Senate talent, including Democrats like Lloyd Bentsen and Daniel Moynihan, and Republicans like Robert Packwood and John Danforth. The Finance Committee deals with the arcane essence of the modern state, the tax code. More than any other committee, it requires both mastery of complex detail and a comprehensive view of social processes.

"EVERY MAN A CAPITALIST"

Long's heroes were populists of various stripes, Andrew Jackson and Senators Robert La Follette of Wisconsin and George Norris of Nebraska. And Huey Long, whose dying words were, "God, don't let me die. I have so much to do." Huey's son says he is doing Father's work, not roughly redistributing wealth but sculpting the revenue system that shapes production and, hence, the distribution of wealth. He says that changes in the revenue system often are better than appropriations at accomplishing government's ends. That is, government is better at providing incentives than services. For example, he would rather give employers tax breaks for providing employees with health insurance than have government provide comprehensive health insurance. Father wanted to make "every man a king" by squeezing the rich. Son wants to make "every man a capitalist" with tax incentives for employee stockownership plans.

After the new boys in town tried to kill some Louisiana water projects, Long introduced himself to a White House meeting: "I'm Russell Long and I'm chairman of the Senate Finance Committee." Asked why he did this, he replied solemnly: "I saw a lot of strangers and I wanted to make sure they knew who I was." Now they know that his committee is the eye of the needle through which Carter's camels must pass. Does that help explain Carter's tendency toward fiscal conservatism? Golly no, says Long, radiating innocence: "Nobody should blame me if the guy has some sense."

Many of Carter's energy proposals will suffer the scrutiny of Long's committee. When Carter takes up the nasty task of restoring the soundness of the social-security system, Long's committee will take charge of Carter's suggestions. When, in the fullness of time, Carter launches his frail craft of welfare reform, the port it will sail toward will be Long's committee. Long's committee was an unsafe haven for Nixon's "Family Assistance Plan," the special project of White House aide Daniel Moynihan. Later, when Professor Moynihan did an autopsy on the lifeless remains of FAP, he decided it died from, among other things, a collision with Russell Long.

Now Senator Moynihan is the most junior Democrat on Long's committee, and he is impatient. Long says, sweetly: why, shucks, "I guess Senator Moynihan knows just what he wants." But, the chairman did not need to say, Moynihan will do a load of compromisin' on the way to the horizon.

SEPARATION OF POWERS

When Carter tackles the tax system that he says is a "disgrace to the human race" he will be dealing with Long's committee, which has done rather a lot to make the tax system what it is. But Long does not expect the Administration's "reforms" to be offensive. With the calm confidence of a Christian with four acres, he says: "I have a *vague* idea of what the *general* direction will be." And well he should. Carter's Assistant Secretary of the Treasury for Tax Policy is a gentleman who for many years was one of Long's most trusted and talented aides.

That is how a prudent Chief Executive accommodates a powerful legislator. It may not quite square with a purist's theory of the proper separation of powers. But such theories are little brooks that flow with the landscape. They are turned aside by boulders like Russell Long, who was part of the Washington landscape long before Carter was, and will be when Carter has gone.

SELECT COMMITTEE ON NARCOTICS ABUSE AND CONTROL REPORT

The SPEAKER pro tempore (Mr. DANIELSON). Under a previous order of the House, the gentleman from New York (Mr. WOLFF) is recognized for 30 minutes.

Mr. WOLFF. Mr. Speaker, one of the major by-products of a factfinding mission is the opportunity afforded to Members to obtain information not available to us here in Washington. Such a significant instance occurred in connection with a joint factfinding mission undertaken by some members of the House International Relations Committee and the Select Committee on Narcotics Abuse and Control. I have the honor and privilege of being chairman of the International Relations Subcommittee on Asian and Pacific Affairs and chairman of the Select Committee on Narcotics Abuse and Control. The work of these committees necessarily dovetails to a large extent since issues involving control of narcotics, and political, military and economic assistance are often but two branches of the same tree. Recently, I led a delegation on a visit to Thailand, which, as most of my colleagues know, is the central source for massive heroin transshipments to Europe and the United States, manufactured from opium originating in what has become known as the "Golden Triangle." The Golden Triangle is that northernmost portions of Burma, Thailand and Laos which rests on the southern borders of the Yunan Province of the Peoples' Republic of China. This area grows between 400 and 500 tons of opium annually. The opium is transported across the border into Thailand, where it is refined into heroin and then smuggled in increasing and perilous amounts to the principal capitals of Western Europe, to the United States and other countries. Only a small percentage of the total crop is retained for local consumption, an activity that has been indigenous to this area of the world for hundreds of years. The select committee studies indicate there is cause for real concern with respect to the appearance of larger amounts of Southeast Asian heroin in the United States, as our joint eradication programs with Mexico begin to produce substantive results in eliminating poppy fields and thus reducing the availability of Mexican heroin. Intelligence sources in foreign countries which are either bulk heroin producers or heroin transshipment points are much more likely to have current information on the activities of those nefarious persons who supply the blood money which is the genesis of any narcotics transaction. From just such intelligence sources, I have learned the names and identities of some major ethnic Chinese residing in Thailand who are primarily responsible for the purchase, shipment and support of the large volume of heroin that is distributed from Thailand into the western countries of Europe and the United States.

Before describing the activities of one major group of these individuals and naming them, which I intend to do in a few moments, I would like to present my colleagues with some background on what appears to be one of the recent developments in international heroin trafficking.

I want to pay a special tribute to the present splendid cooperation of the Thai Government. Prime Minister Thanin has made narcotics control one of the primary priorities of the Government. The substantial and cooperative work being done by the Royal Thai Police under General Sarasin and the intensive support given by General Chavalit along with the primary attention of General Kriansak has been of great value in the

results obtained so far. While there is much work yet to be done we are finding that the Thai Government understands its international responsibilities and is doing something about them in the area of drug control.

The Chinese Triad Societies which began their existence centuries ago as self-help organizations, have largely become criminal syndicates in recent years. Because of loose banking regulations and practices in the Far East and the close connection these ethnic Chinese have with relatives and friends scattered all over the globe, they have been able to assume a major role in the distribution, receipt, and dissemination of heroin. They work in mysterious ways, their business transactions clothed in coded language. Much business is transacted by word of mouth and the trust that is extended by one Triad member to a blood brother is inviolate. They have their own code of silence not unfamiliar to law enforcement officers around the world who once dealt with organized gangs of criminals that transported Turkish heroin to the United States.

The secret societies known as the Triad were formed in Mainland China during the 18th century. Their original purpose was self-protection and opposition to the various Chinese dynasties. The names of the various secret societies are taken from the areas in China for which the original members emigrated. The headquarters of the secret societies are in Hong Kong. As members of the secret societies scattered throughout Southeast Asia and Europe, smaller branches were formed. Right up through the 1960's the secret societies were importing No. 3 heroin and opium for use in the countries where they were located. In the early 1970's the secret societies began to import No. 4 heroin along with No. 3 heroin which is used for smoking purposes. These groups, located in the various European countries are connected with the base operation and families of Hong Kong. It is believed that they are largely responsible for the upsurge in heroin trafficking coming from Southeast Asia to Western Europe. The increase in level of heroin smuggling is reflected in the increase of heroin seizures in Western Europe from a level of 15 to 20 kilograms in the 1960's to over 600 kilograms last year. The primary secret society in Western Europe as far as heroin trafficking is concerned was the 14K group which has recently been pushed out by a rival based in Malaysia and Singapore. In most countries, including Hong Kong, it is illegal to belong to a secret society. However, because of the ethnic ties which all members of secret societies have, it is very hard to infiltrate these organizations. The Triads use the trafficking in narcotics to support their other legitimate and illegitimate activities.

Many of these individuals reside in Bangkok, living in baronial splendor, adopting Thai names, and represent the primary reason why Southeast Asian heroin has become an overwhelming threat to the national security of our country. For example, Chang Kai-Cheng—also known as Chang P'u-Ching, also known as Hu Chin-Te, also known as Thawee Sakulthanapanish—left Yunan Province in China in 1949 and took refuge in Burma to escape the Communist takeover. He then married Liu-Chao-Ting and has eight children, some of whom study in Singapore, Taiwan, and the United States. He moved to Chiang Mai, Thailand, in 1965 and began his narcotics operation. Within 5 years, he had become and remains a most prominent figure in the Thai narcotics community. Mr. Chang has residences in Bangkok, Chiang Mai, and Mae Sai, Thailand. He is the head of the largest heroin distribution ring in that country. His list of associates is a "Who's Who" of Chinese ethnics in the Bangkok narcotics market. He has investments and is the coowner of many businesses among them the Broadway Hotel, Bangkok; Bai Cha Hom Tea Co., Bangkok; Tung Hsing-Chan Hardware and Trucking Co., Chiang Rai, Thailand; and the Refined Tea Manufacturing Co. of Bangkok. Mr. Chang's operations in northern Thailand are conducted by confederates who purchase most of his narcotics from the hill tribes with financial support provided by Mr. Chang. Originally, Mr. Chang's narcotics business was located on the northern frontier of Thailand and northern Burma where he produced "999" brand of morphine. After moving to Chiang Mai because of pressure from the Burmese Government, he went to Laos and set up a gold mining company which was a front for a heroin factory at Gold Delta, Laos. In 1976, the heroin refinery was moved to Tachilek, Burma, at the edge of the northern border of Thailand, under protection from certain of the opium warlords in that area. Mr. Chang's confederate, Sha Ming, is the superintendent of the refinery and Mr. Chang remains in Bangkok distributing his poison to regular customers. Mr. Chang has excellent narcotics connections in Holland, Singapore, Malaysia, Hong Kong, and the United States. His "bag man" is Mr. Chang Chen Schen, who also lives in Bangkok and who has contacts with many government officials. Mr. Chang has Thai citizenship, resides at 132–5 Klong Papa Samsen, Bangkok; he also owns a house at 105 Market Street, Mae Sai, Thailand. As of this date, Mr. Chang roams about the globe frequently and can be said to be one of the most important figures in the spreading of Asian poison to the youth of the world.

There are more such persons. Mr. Chang Chen-Ch'eng—also known as A'Pung, also known as Suthep Benjapokee—was born in Thailand with an ancestral home in Teachow, China. He lives in Bangkok in a beautiful modern home which has an underground room used for gambling and smoking opium. He is close to Mr. Chang, whom I have already described, and the various other ethnic Chinese who live in Bangkok who are in the narcotics business. He owns the Victory Hotel in Bangkok and a jewelry store at the rear of the hotel called Beauty Thai Silk. About 10 years ago, he went to the Thai-Laotian border and stayed there for some time before returning to Bangkok. He began to make considerable amounts of money in 1968 when Thailand's armed forces participated in the Vietnam war. This effort gave him the opportunity to smuggle large quantities of heroin to Saigon for sale to American soldiers, in collusion with some Thai Army officers. Intelligence sources reveal that between 1970 and 1971 A'Pung smuggled 100 kilograms of No. 4 heroin and several tons of processed opium to Saigon where fellow triad member Chang Ming distributed the narcotics. Mr. A'Pung has a knack for making friends in Thai Government circles. He has close connections with the Thai Army and the Thai police as well as officials of the former government. Mr. A'Pung also owns two export-import firms, Thai Gem and Lin Ho Trading Co's. in Bangkok. He has recently purchased a sumptuous villa in the area of Suthisan, Thailand, where Mr. Chang and his associates often visit to conduct business and to gamble.

Another significant piece of intelligence relates to a Mr. Sha Ming—alias Old Sua—a Yunnanese Chinese who resides in Thailand. Mr. Sha moved to Thailand from Burma in 1961 and now occupies the first important position of principal assistant to Mr. Chang. In 1966, when Mr. Chang established a heroin factory in the jungle area of Hui Hse, Laos, Mr. Sha was made superintendent of this factory. The chief pharmacist was a well-known heroin refiner named Hsiao Wang. At a later time this refinery was moved to Tachilek, Burma, under the protection of two Chinese opium warlord leaders named Yang Shiash Lee and Lo Hsin Han. Mr. Sha built a large laboratory at this site where he purchased raw opium while Mr. Chang supervised sales in Bangkok. In 1971, as the result of the loss of protection of the local armies and a change in Burmese Government policies, Mr. Sha's heroin refinery lost its armed protection and the result was the scattering of the refinery equipment to several mobile factories in the mountainous Golden Triangle area. At the present time, Mr. Sha is actively operating a comparatively large heroin refinery near Chiang Rai, Thailand.

Another associate of Mr. Chang Kai-Ching is Ma Hseuh-Fu, also a Yunnanese Chinese who came to Burma from China in 1949 and joined Mr. Chang as a partner in the opium business.

Mr. Ma is an extremely wealthy man, having made fortunes in the opium smuggling operation that he conducted from 1961 to the present time in Hong Lo, Burma. In 1964, Mr. Ma and his family moved to Bangkok. He and Mr. Chang, his partner and fellow Triad member, invested in the Cha Mon Tea Co. in Bangkok and used the company as a front for the transshipment of large quantities of heroin into international markets. He owns interests in the June Hotel and the Ming Tea Co., both of Bangkok, and is closely associated with General Li, a notorious opium exporter and Mr. Chang.

Mr. Wa Yao-Tung, another Yunnanese Chinese, who came to Thailand when he was very young, lives in a Western-style ranchhouse with a large garden adjacent to it. He also owns a house in Chaing Mai, Thailand. Between 1969 and 1971 he

worked for a number of refinery operators, including the gentlemen I have already named. He is mainly responsible for supplying the precursors necessary for the manufacture of heroin. He is a major distributor of narcotics in Bangkok and has recently earned the equivalent of $1 million with part of which he purchased two houses, one on Sukuavait Road in Bangkok. Mr. Wa moves around from house to house in order to confuse law enforcement efforts and is known to be well connected in government circles. I wish also to call attention to the following three narcotics financiers and power brokers: Mr. Na Tsai-K'Uei, a Yuannanese Chinese, Mr. Ma Yao-Hua who is also Yuannanese, and Mr. Chu Hsueh-Pin. These three gentlemen reside in Thailand and are principal distributors of No. 3 heroin with connections in the Golden Triangle as solid as those they have in the United States. They own houses, hotels, export-import companies, and other fronts for their nefarious businesses.

It must be realized that these individuals supply the vast amounts of money necessary to guarantee a continuous large flow of opium. They finance the refineries which produce No. 3 and No. 4 heroin. They provide support for the smuggling operations after the merchandise arrives in Bangkok, and also the front money for the costs of distribution. Fortunes are collected in exchange for a nod, a handshake or an understood password from their Triad brethren all over the world. Their wealth is reminiscent of the legendary rulers of ancient days.

Mr. Speaker, to my knowledge, this burgeoning and extremely dangerous situation has never been made public before. I am doing so because it is necessary for the American people to identify their enemies. Together with the corrupt officials without whose connivance this traffic would be impossible, they are princely purveyors of universal misery.

I trust that all appropriate Federal agencies will take note of what has been said here today and will lend more support to the governments of every civilized nation in the world that is dedicated to combating the spread of heroin.

Mr. GILMAN. Mr. Speaker, will the gentleman yield?

Mr. WOLFF. I yield to the gentleman from New York.

Mr. GILMAN. Mr. Speaker, I want to thank my colleague, the distinguished chairman of the House Select Committee on Narcotics Abuse and Control for focusing attention on this Thai problem.

There have been recent reports that the production of opium emanating from the Golden Triangle—from Burma, Thailand and Laos—has been increasing and that this area of Southeast Asia now accounts for an estimated 25 percent of the world's production of opium.

Mr. Speaker, it is imperative that these names of the members of organized crime be made known to the public here and abroad. Narcotics trafficking is an insidious business with its corruptive tentacles reaching into every facet of a nation's society, thereby undermining the very roots of that society.

Mr. Speaker, it is essential that the consciousness of the global public be awakened to recognize the devastating effects of narcotics trafficking. Accordingly, Mr. Speaker, I commend the gentleman from New York (Mr. WOLFF) for focusing attention on this worldwide problem and for putting the limelight on the traffickers who are trading on the minds and bodies of our American youth, and of the young people throughout the world.

I thank the gentleman from New York for his comments and also for the major contribution he has made in the fight against drug abuse and narcotics trafficking. He has done an outstanding job.

PERSONAL EXPLANATION

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, yesterday, I was in my district attending the ceremony commemorating the beginning of the construction of our great beach erosion and hurricane prevention project from Baker's Haulover to Government Cut under which our beaches will be extended 200 feet into the ocean and properly protected. This project will cost about $64 million and the Federal Government will contribute about 59 percent of that sum and the work will, of course, be constructed under the Corps of Engineers in accordance with the corps plans.

I was scheduled to take a 12:10 p.m. plane which would have gotten me back here in time to vote on the several bills on which the House voted yesterday but unhappily there was a power failure in all of southeast Florida, including Miami, and my plane was 2 hours late in arriving.

I missed the following rollcalls: Roll Nos. 233, 234, 235, 236, 237, and 238. On each, I would have voted "aye" had I been here.

FINANCIAL DISCLOSURE

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, as I have done every year since my first election to Congress, I am today disclosing my and my wife's statement of assets and liabilities, schedule of the securities we own, schedule of other securities of which we are income beneficiaries, and schedule of the taxes we paid in calendar year 1976. While this disclosure is not required by law at the present time, I believe it should be and am the sponsor of legislation requiring full financial disclosure, believing this to be the best protection of the public against possible conflicts of interest. The statement and schedule are as follows:

RICHARD L. AND BETTY ANN OTTINGER STATEMENT OF ASSETS, LIABILITIES AND CAPITAL AS AT MARCH 31, 1977

ASSETS

Cash (on hand or uninvested)	$64,907
Marketable securities—Betty Ann Ottinger (cost $56,931—at market value (Schedule 1))	210,137

DISASTER RELIEF ACT NEEDS REFORM

(Mr. OTTINGER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OTTINGER. Mr. Speaker, I am introducing legislation today to amend the Disaster Relief Act of 1974 and the National Flood Insurance Act of 1968 to extend the various forms of assistance available under these two major and highly commendable programs.

These laws and their predecessors have served as the congressional response to more than 10,000 serious floods which have occurred since the United States was first settled. In recent years, floods have caused losses averaging $1.5 billion; more than 90 percent of all property damage caused by natural disasters in America results from floods. The 1974 act itself came about, as we all know, following the tragic havoc wreaked by Hurricane Agnes. The philosophy behind this legislation was to provide assistance for individuals, families, nonprofit groups, and local governments adversely affected by a major disaster. The act provided for temporary housing assistance, mortgage and rental payments, unemployment assistance, food commodities, relocation help, crisis counseling and training, emergency public transportation, and grants to individuals and families who are unable to obtain assistance through other sources for disaster-related expenses and serious needs.

This last category of aid, established by section 408 of the act, is perhaps its most important provision and certainly one of the cornerstones of the entire Federal disaster relief program. It is designed mainly to assist low- and lower-middle-income people who cannot obtain SBA disaster loans and who, absent this stipend, would be unable to replace or repair much of the damage suffered in a disaster.

In September of 1975, the State of New York was inundated by Hurricane Eloise, and 12 counties in the State were declared major disaster areas by the President. My own county of Westchester was among them and suffered over $40 million in damage to public and private property. New York State damages totaled approximately $125 million according to Gov. Hugh Carey, and neighboring Pennsylvania sustained $85 million in losses. Needless to say, I have become deeply involved and interested in our disaster relief and flood control programs.

In trying to assist my constituents in picking up the pieces, I have learned of the many problems which today plague the effective administration of the disaster relief program at both the Federal and State levels. The guidelines for the section 408 program in particular have been written and interpreted by the Federal Disaster Assistance Administration so as to exclude major and vital categories of assistance. Westchester County Commissioner of Social Services Charles W. Bates recently discussed some of these problems with me in a letter he wrote early last year in response to consensus I had passed on to him from affected constituents. I am inserting a copy of our correspondence for the benefit of my colleagues:

WASHINGTON, D.C.,
March 9, 1976.

Commissioner CHARLES W. BATES,
Department of Social Services,
White Plains, N.Y.

DEAR COMMISSIONER BATES: My district offices have advised me of a number of complaints from constituents awaiting their 408 flood disaster payments from the New York State Department of Social Services.

As I understand it, the County Department of Social Services has processed applications for the grants and forwarded them to the New York State Department of Social Services. Unfortunately, the processing at the State level has been very slow. I am sure that you, too, are being queried by persons awaiting their grants. Although I have been advised by the FDAA that the State will be moving quickly now in processing applications, it is six months since the flood and many of the flood victims are still living with the effects of the disaster. Additionally, the federal regulations may exclude restoration of certain damages.

Because the Department of Social Services acted as the local agency for the 408 program, I would be very appreciative of learning the Department's experiences in administering the program—its strengths and weaknesses, and any inequities that may exist because of the Federal regulations. A report of this nature will be most helpful to me in determining whether or not the program needs to be changed administratively or through new legislation.

Your response would be appreciated.

Sincerely yours,

RICHARD L. OTTINGER,
Member of Congress.

WHITE PLAINS, N.Y.,
March 22, 1976.

Hon. RICHARD OTTINGER,
Congressman,
White Plains, N.Y.

DEAR CONGRESSMAN OTTINGER: In response to your inquiry of March 9, 1976 regarding the 408 Flood Disaster Program, staff responsible for handling the applications has advised me of the following:

(1) The Program does not restore affected homes to their pre-flood status. This is due in part to the concept of the Program which is defined as one for "basic necessities". The current interpretation of "basic necessities" excludes many items from coverage.

(2) It appears that the 408 Program does not cover all parts of the home. For example, a family room that was damaged would not be covered if there is another living room area in the house.

(3) Areas of the home that are not "lived in" are not covered. Therefore, such rooms as den, playroom or utility room would not be covered even though they may have been severely damaged, as they are not considered essential to the family's functioning.

(4) While repairs to structural damages are covered, it appears that repainting is not. Evidently, under the 408 Program guidelines, repainting is considered a "cosmetic" item. This appears inconsistent, for if the homeowner had National Flood Insurance, repainting would be provided.

(5) The repair or replacement of retaining walls is not taken into consideration unless the condition presents imminent hazard to the occupants. Many of the applications received included claims for such repair or replacement at the retaining walls maintained the existing water table and continued existing drainage patterns to prevent damage to the home. In these cases, the repair or replacement of retaining walls might prevent flooding of the home in the future.

(6) The guideline allowances contained in the New York State Disaster Plan for replacement of furniture and clothing are based on the Public Assistance allowances for these necessities unless original purchase receipts are available. Needless to say, such receipts were not generally on hand.

(7) The Program does not provide coverage for the replacement of rugs or carpeting if they had been used over a hardwood or tile floor. Floor covering was allowed only to cover rough, unfinished floors and then only at the cost of linoleum.

(8) Many of the applications received included necessary repairs to or replacement of interior doors, which we were advised were not covered. Allowances for exterior doors were included.

An additional factor in the operational aspect of the Program should be noted. Applicants are required to obtain two estimates for each item of repair listed on the claim. Following the receipt of these estimates which in some cases proved impossible to obtain without a fee, a Department of Social Services representative was required to visit the home and "certify" the loss. Since there are no professional adjusters on our Agency staff, it would seeem advisable for the State to employ adjusters when the 408 Grant Program is implemented. This would be similar in nature to the procedure used by the Small Business Administration when they move into a disaster area. It would save the applicant a great deal of anxiety and would also provide a more accurate assessment of the amount of money necessary to repair the home and property. Perhaps arrangements could be made to utilize some of the SBA Loss Verifiers to certify 408 Grant losses.

You are undoubtedly aware that the locality receives no reimbursement for costs incurred in administering the 408 Grant Program.

I trust our observations may prove helpful as you assess the Program for possible administrative or legislative change.

We appreciate your inquiry and interest.

Sincerely yours,

CHARLES W. BATES,
Commissioner.

The legislation I am introducing today would provide greater congressional guidance to the FDAA as to the kinds of assistance which section 408 should permit. It would redress many of the specific deficiencies cited by Commissioner Bates, while protecting the integrity of the program as a disaster relief measure. My bill would define "disaster-related expenses and serious needs" more broadly than the interpretation of the law by FDAA. The cost of structural repairs to any room of a home; repair or replacement of floor coverings; repainting the interior of one's home; and repair, replacement, or rebuilding of outdoor retaining walls would be among the categories of assistance available under section 408 if my bill were enacted.

Meanwhile, the bill would exclude by law most of the losses for which no aid is presently allowed under FDAA regulations: business and farm business losses, improvements or additions to real or personal property, landscaping, financial obligations incurred prior to the disaster, or any disaster-related expense or serious need for which assistance was available from other means but was refused by the individual or family.

I believe that clarification of the expenses for which aid is available under section 408 will help make the program work effectively for those who depend upon it when they are unable, for one reason or another, to obtain SBA disaster loan or flood insurance funds. Section 408 serves mainly the unemployed, retired, or person of moderate income who could not otherwise afford to rebuild his home—or his life—following a major disaster.

My legislation would address another serious problem in the 408 program; that is, compensation to the States which by law administer the guidelines and grants, and the localities which assist them in doing so. Under present law, a State may devote 3 percent of any grant under this section to administrative expenses. Local governments receive no reimbursement whatsoever, regardless of how intensive their efforts to assist flood victims may be. This is obviously insufficient.

This bill provides for an increase in State compensation from 3 to 4 percent of any grant, while permitting the State to devote an additional 1 percent to local governments who assist in the 408 relief program. I believe this will encourage States and localities to take a more active and effective role in this very worthwhile effort.

The third section of the bill would deal with a very different problem. As presently written, the law has been interpreted by FDAA to exclude disaster relief assistance under section 402 to nursery schools, preschools, and other early childhood education programs operated by private nonprofit organizations. I do not believe that this is what Congress intended in the 1974 act, but legislation appears to be necessary to correct this problem. This legislation would bring all early childhood educational facilities under the purview of the act. We have discussed the value of these kinds of facilities in other forums, particularly during debate on the day care bill, but if a preschool is forced to shut down as a result of a flood or other disaster, thousands of working parents might be terribly hurt. The expense of this provision would be minimal in comparison to the benefits to be reaped for both children and working parents.

The final change which my bill makes in present law augments the highly successful flood insurance program. The National Flood Insurance Act of 1968 provides insurance for the structure and contents of a home, but does not provide any coverage for outdoor property. I have had many letters from constituents who have suffered tremendous damage to their walks, driveways, or retaining walls asking why this is so. There are reasons why such an extension must be carefully drawn but the principle, in my view, is a sound one. Therefore, I am proposing an amendment which would extend $5,000 in insurance coverage to a homeowner for any outdoor property, or permanent fixture—other than gardens or landscaping which are so easily inundated and damaged in nonflood conditions—which is adjacent to the home and on its property.

Mr. Speaker, this proposed legislation will strengthen the disaster assistance program and will help meet its worthy goals more effectively. The long-term solution to this truly serious problem in our flood-prone areas is to provide permanent and effective flood control of a structural nature wherever this is economically and environmentally feasible. In the meantime, it is appropriate to provide short-term relief where the long-term solutions are not foreseeable. I hope the Committee on Banking, Currency and Housing will give serious consideration to this and other flood disaster relief measures designed to improve this important program.

I am inserting a copy of the text of the bill for the benefit of my colleagues:

H.R. 7237

A bill to amend the Disaster Relief Act of 1974 and the National Flood Insurance Act of 1968, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 408(a) of the Disaster Relief Act of 1974 is amended to read as follows:

"SEC. 408. (a) The President is authorized to make a grant to a State for the purpose of such State making grants to meet disaster-related expenses or serious needs of individuals or families where such individuals or families are unable to meet such expenses or needs through assistance under other provisions of this chapter, or from other means. For the purposes of this section, such disaster-related expenses and serious needs include, but not limited to, the cost of—

(1) structural repairs to any room of a home;

(2) repainting the interior of a home;

(3) repairing or replacing the tile or hardwood floors, or rugs, carpets, linoleum, or other floor covering in any room of a home; or

(4) repairing, replacing, or rebuilding outdoor retaining walls.

Assistance provided under this section does not include—

(A) business losses, including farm businesses;

(B) improvements or additions to real or personal property;

(C) landscaping;

(D) financial obligations incurred prior to the disaster; or

(E) any disaster-related expense or serious need or portion thereof for which assistance was available from other means but was refused by the individual or family.

The Governor of a State shall administer the grant program authorized by this section.".

SEC. 2. Section 408(d) of the Disaster Relief Act of 1974 is amended to read as follows:

"(d)(1) A State may expend not to exceed 4 per centum of any grant made by the President to it under subsection (a) of this section for expenses of administering grants to individuals and families under this section.

"(2) A State may expend not to exceed 1 per centum of any grant made by the President to it under subsection (a) of this section for reimbursement to local units of government for expenses incurred in conjunction with assisting the State in carrying out such State's duties under subsection (a) of this section."

SEC. 3. Section 402(b) of the Disaster Relief Act of 1974 is amended by adding at the end thereof the following: "For the purposes of this section and notwithstanding any other provision of law, educational facilities include preschools, nursery schools, and other facilities in which early childhood education programs are conducted.".

SEC. 4. Section 1306(b)(1)(A) of the National Flood Insurance Act of 1968 is amended—

(1) by striking out "and" at the end of clause (ii);

(2) by redesignating clause (iii), and all references thereto, as clause (iv) and by inserting the following new clause immediately after clause (ii):

"(iii) $5,000 aggregate liability per dwelling unit for any property, and any permanent fixture contained therein or located thereon, not including gardens or landscaping, adjacent to such unit, and".

THE HEROISM OF CLAYTON EDWARD ARD

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SIKES. Mr. Speaker, earlier this year, a police officer in my district performed an outstanding act of selfless heroism which resulted in saving a young man's life. The story could have ended in tragedy but, because of this officer's courage and endurance, it has a happy ending. At a time when our law enforcement officers seem to be under attack from the courts and from the streets, I found this account of bravery particularly heart-warming and would like to share it with my colleagues.

A 23-year-old serviceman was trapped for more than 10 minutes when his car plunged into Bayou Chico, Pensacola, Fla., early on the morning of February 16. This was a cold winter night with high winds and gusts resulting in a chill factor of 16 to 20 degrees.

The bridge tender who saw the car go off of the end of the dead end street attempted to reach the car while it was still only partially submerged. He was unsuccessful and went for help. Detective Clayton Edward Ard with the Pensacola Police Department was nearby and was summoned to the scene. He arrived in minutes, immediately took off his weapon and boots and dove into the water. After several dives into the cold water, he felt the man's hand but was unable to pull him from the submerged vehicle. He surfaced for breath and was thrown a rope from a fire truck. He dove again and tied the rope to the bumper of the car. The car was pulled out of the water, the door opened, and the subject was freed and given mouth to mouth resuscitation by members of the Pensacola Fire Department.

Danny Harold Lambright, the young sailor who was driving the submerged car, survived the ordeal. Later he returned to duty, completed the Navy Photography School at Corry Field, and is now serving aboard the U.S.S. *Lexington*.

To voluntarily risk one's own life in saving or attempting to save the life of another person is indeed an outstanding act of bravery. Detective Ard is to be commended for his quick and skillful action in saving the life of Mr. Lambright. His unselfish efforts in this incident were above and beyond the call of duty and merit special attention. I am recommending him to the Carnegie Hero Fund Commission for appropriate recognition.

Officer Ard is a native Floridian, born in Pensacola on September 4, 1948. He attended public schools in Pensacola and graduated from Pensacola High School with the class of 1968. He is now pursuing an Associates Degree in Law Enforcement at the Pensacola Junior College. He was employed by the city of Pensacola as a police officer November 17, 1970 and is currently assigned as a plainclothes officer in the major crime control unit of the patrol division.

THE WARREN JERNIGAN FAMILY

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, the Arlington United Methodist Church recently published in its newsletter a very complimentary article on the Warren Jernigan Family. Both Warren and his lovely wife, Helen, are very well known on Capitol Hill. He has given excellent service for years and is Chief Doorman of the House of Representatives. Helen, also a Capitol Hill employee, is a distinct credit to the Hill. They have two bright and alert sons, Warren II and Robert, who show the result of good home training. All of them are fine Christian people who devote much of their time to the church and the community. They are to be congratulated for their many accomplishments and I submit their success story as reported by the AUMC newsletter for inclusion in the CONGRESSIONAL RECORD. I do not want to pass up the opportunity to say that Warren is from Pensacola, Fla., in my congressional district and is a member of a highly respected old West Florida family.

The article follows:

PEOPLE TO KNOW . . .

Warren and Helen Jernigan with their two boys Warren II, and Robert may have first come to the attention of AUMC members at the Pancake Breakfast Easter Sunday morning at the church. Yes, they were in charge of those hard working young cub scouts that netted Pack No. 151 over $300.

This success story was no accident. Behind it all are probably two of the most hard working and effective members at AUMC. Warren is the Institutional representative for Scouting at AUMC. Helen is a Den Mother for Pack No. 151, Warren II (11) is a Den Chief and Robert (9) is Denner for Den 1 of Pack No. 151. To know how effective the Jernigans have been with cub scouting is to learn that at the beginning of 1977 there were 4 adults and 5 boys participating. Four months later there are 27 boys and 1 parent participant for each boy in the Pack. Their budget went from $100 in-the-hole to a balance of over $600. Many persons are to be thanked for this splendid achievement according to Warren, but the truth is it could not have happened without the Jernigan enthusiasm and leadership.

The Jernigans came to AUMC 4 years ago when they moved to Arlington from Dale City where they had been members of the Church of the Good Shepherd. Warren is currently serving on the Commission on Education and the Administrative Board. In addition, both Warren and Helen were among the several persons active in helping to launch The Uniter in its early editions.

Warren and Helen lived in the same neighborhood near Capitol Hill where they happened to meet. Warren was a native of Pensacola, Fla., while Helen came to the U.S. from Yugoslavia at the age of 14. Her parents were of Russian ancestry and were forced to leave the country at the time Tito broke off relations with the Soviet Union. An aunt worked at the UN and arranged for the family to come to the U.S. Helen claims to have learned English in only 2 short years. Warren came out of the Air Force in 1958 and came back to Pensacola to look for a job at home. He accepted one as Doorman of the House believing it to be a job right there in Florida. As it turned out the job was in Washington, D.C. in the House of Representatives. He came away and at the writing Warren has been a Chief Doorman of the House longer than any other person in the history of the Congress. He was made Chief Doorman in 1963, a position he still holds today. He is the President and founder of the U.S. House of Representatives Doormen's Society. He is the recipient of numerous awards for service to the House during his years there.

An interesting incident occurred when the Jernigans walked down the hall at AUMC looking at the pictures of former pastors of the church. There they saw a picture of Dr. Latch. It so happened that prior to their joining AUMC their son Robert had been christened by Dr. Latch serving in his official capacity as Chaplain of the House of Representatives. It turned out that Robert was the first baby ever christened by the Chaplain of the House in its history.

Warren is very active in the Masonic Order. Currently he is Worshipful Master, Federal Lodge No. 1, F.A.A.M., D.C., President of 1977 Association of Worshipful Masters, Wash., D.C., and serves on many other Masonic committees.

Warren would like to see adults taking a much more active role with youth programs in the church. He feels that youth and adults working together create a strong family atmosphere. With this in mind, Warren welcomes any adult in the church to just drop in the last Thursday evening in the month at a cub pack meeting and say "hello" to the boys.

The church can only do the Lord's work through the service of its people. Certainly the Jernigans have taken this part of their vows of membership very seriously.

AUMC can thank God that they have come not only to witness, but to serve.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. MICHEL (at the request of Mr. RHODES), after 3 p.m. today, on account of death in family.

To Mr. DEL CLAWSON (at the request of Mr. RHODES), from May 9 through May 19, on account of iliness.

To Mr. CORMAN (at the request of Mr. WRIGHT), for today, on account of official business.

To Mr. FISH (at the request of Mr. RHODES), for May 13, on account of illness in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mrs. FENWICK) to revise and extend their remarks and include extraneous material:)

Mr. KEMP, for 15 minutes, today.

Mr. JEFFORDS, for 15 minutes, today.

Mr. DUNCAN of Tennessee, for 10 minutes, today.

Mr. FISH, for 5 minutes, today.

(The following Members (at the request of Mr. CORNWELL) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. FORD of Michigan, for 5 minutes, today.

Mr. CONYERS, for 5 minutes, today.

Mr. YOUNG of Missouri, for 5 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. EVANS of Indiana, for 5 minutes, today.

Mr. WAGGONNER, for 5 minutes, today.

Ms. HOLTZMAN, for 60 minutes, today.

Mr. WOLFF, for 30 minutes, today.

Mr. BEILENSON, for 5 minutes, on May 18.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. PICKLE, to revise and extend his remarks in connection with H.R. 3722.

(The following Members (at the request of Mrs. FENWICK) and to include extraneous matter:)

Mr. SARASIN in two instances.

Mr. GRASSLEY.

Mr. MICHEL.

Mr. CRANE in two instances.

Mr. HORTON.

Mr. GILMAN in three instances.

Mr. BROYHILL.

Mr. DUNCAN of Tennessee.

Mr. ROUSSELOT in two instances.

Mr. TREEN.

Mr. STEIGER.

Mr SAWYER.

Mr. SHUSTER.

Mr. BURGENER.

Mr. CONTE.

Mr. RUDD.

Mr FISH in two instances.

Mr. SYMMS.

(The following Members (at the request of Mr. CORNWELL) and to include extraneous material:)

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. MCDONALD in five instances.

Mr. GAMMAGE.

Mr. VANIK in two instances.

Mr. TSONGAS in two instances.

Mr. MARKEY.

Mr. FLORIO.

Mr. DINGELL in two instances.

Mr. RONCALIO.

Mr. BIAGGI in 10 instances.

Mr. MOAKLEY.

Mr. CARNEY.

Mr. RODINO.

Mr. APPLEGATE.

Mr. EILBERG in 10 instances.

Mr. MIKVA.

Mr. BYRON in two instances.

Mr. KILDEE.

Mr. DUNCAN of Oregon.

Mr. SCHEUER in two instances.

Mr. NEAL.

Mr. RANGEL.

Mr. TEAGUE.

Mr. AMBRO.

Mr. DOWNEY.

Mr. PRICE.

Mr. CONYERS.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res 24. Joint resolution to authorize and request the President to issue annually a proclamation designating the first Sunday of September after Labor Day of each year as "National Grandparents Day"; to the Committee on Post Office and Civil Service.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 3477. An act to reduce individual and business income taxes and to provide tax simplification and reform.

ADJOURNMENT

Mr. WOLFF. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 19 minutes p.m.), the House adjourned until tomorrow, Wednesday, May 18, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1507. A letter from the Governor, Farm Credit Administration, transmitting the 43rd Annual Report of the Farm Credit Administration and the cooperative Farm Credit System, covering fiscal year 1976, pursuant to section 5.18(3) of the Farm Credit Act of 1971; to the Committee on Agriculture.

1508. A letter from the Assistant Secretary of Defense (Comptroller), transmitting the selected acquisition reports and SAR summary tables for the quarter ended March 31, 1977, pursuant to section 811(a) of Public Law 94-106; to the Committee on Armed Services.

1509. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting notice of the proposed final allocation formula and program guidelines for the State Planning Commissions program—intrastate planning, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

1510. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting notice of the proposed final regulations governing the award of grants and contracts in modern foreign language and area studies, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

1511. A letter from the Director of ACTION, transmitting a draft of proposed legislation to provide authorizations of appropriations for programs under the Domestic Volunteer Service Act of 1973; to the Committee on Education and Labor.

1512. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

1513. A letter from the Attorney General, transmitting a draft of proposed legislation to authorize appropriations for the purpose of carrying out the activities of the Department of Justice; to the Committee on the Judiciary.

1514. A letter from the Secretary of Housing and Urban Development, transmitting a draft of proposed legislation to amend the Disaster Relief Act of 1974 to provide for authorization of appropriations thereunder through fiscal year 1979; to the Committee on Public Works and Transportation.

1515. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38 of the United States Code to increase the rates of disability and death pension and to increase the rates of dependency and indemnity compensation for parents, and for other purposes; to the Committee on Veterans' Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[Omitted from the Record of May 16, 1977]

Mr. BROOKS: Committee on Government Operations. H.R. 6805. A bill to establish an Agency for Consumer Protection in order to secure within the Federal Government effective protection and representation of the interests of consumers, and for other purposes, with amendment (Rept. No. 95-347). Referred to the Committee of the Whole House on the State of the Union.

Mr. FOLEY: Committee on Agriculture. H.R. 7171. A bill to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes (Rept. No. 95-348). Referred to the Committee of the Whole House on the State of the Union.

Mr. BOLLING: Committee on Rules. House Resolution 575. Resolution providing for the consideration of H.R. 10. A bill to restore to

Federal civilian and Postal Service employees their rights to participate voluntarily, as private citizens, in the political processes of the Nation, to protect such employees from improper political solicitations, and for other purposes (Rept. No. 95-350). Referred to the House Calendar.

Mr. PEPPER: Committee on Rules. House Resolution 576. Resolution providing for the consideration of H.R. 6884. A bill to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain changes in the authorities of that act, and for other purposes (Rept. No. 95-351). Referred to the House Calendar.

Mr. MITCHELL of Maryland: Joint Committee on Defense Production. Annual report of the Joint Committee on Defense Production 1976 (Rept. No. 95-352). Referred to the Committee of the Whole House on the State of the Union.

REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

[Omitted from the Record of May 16, 1977]

Mr. BROOKS: Committee on Government Operations. H.R. 6804. A bill to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes; with amendment (Rept. No. 95-346, pt. I). Referred to the Committee on Post Office and Civil Service for a period ending not later than May 26, 1977, for consideration of such portions of the bill as fall within that committee's jurisdiction under clause 1(o)(5), rule X, and ordered to be printed.

Mr. TEAGUE: Committee on Science and Technology. H.R. 6796. A bill to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes; with amendment (Rept. No. 95-349, pt. I). Referred to the Committee on Armed Services and to the Committee on International Relations for a period ending not later than June 2, 1977, for concurrent consideration of only such portions of the bill as fall within the jurisdictions of those committees under rule X, clause 1(c)(11) and clause 1(k)(15), respectively, and ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANNUNZIO (for himself and Mr. BARNARD):

H.R. 7224. A bill to increase for a 5-year period the duty on certain hand tools, and for other purposes; to the Committee on Ways and Means.

By Mr. BURLESON of Texas:

H.R. 7225. A bill to repeal the Occupational Safety and Health Act; to the Committee on Education and Labor.

By Mrs. COLLINS of Illinois (for herself, Mr. MOAKLEY, Mr. CLAY, Mr. STOKES, Mrs. LLOYD of Tennessee, Mr. NIX, Mr. DUNCAN of Tennessee, Mr. JENRETTE, Mr. BADILLO, Mr. MITCHELL of Maryland, and Mr. NEAL):

H.R. 7226. A bill to amend the Internal Revenue Code of 1954 to provide an additional personal exemption for certain elderly individuals whose spouses have died; to the Committee on Ways and Means.

By Mr. CORMAN (for himself, Mr. RANGEL, Mr. STARK, Mr. JACOBS, Ms. KEYS, Mr. FISHER, Mr. BURKE of Massachusetts, Mr. BRODHEAD, Mr. TUCKER, Mr. VANDER JAGT, Mr. KETCHUM, and Mr. GRADISON):

H.R. 7227. A bill to amend the Social Security Act to make needed improvements in the programs of supplemental security income benefits, aid to families with dependent children, child welfare services, and social services, and for other purposes; to the Committee on Ways and Means.

By Mr. DINGELL (for himself, Mr. BROYHILL, Mr. CONABLE, Mr. MANN, Mr. ROBERTS, Mr. RAHALL, Mr. MOLLOHAN, Mr. MATHIS, Mr. CORNWELL, Mr. FOUNTAIN, Mr. GUYER, and Mr. BAUCUS):

H.R. 7228. A bill to amend the Clean Air Act to establish certain motor vehicle emission standards, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. EVANS of Indiana:

H.R. 7229. A bill to reorganize the executive branch of the Government by consolidation of functions and to increase efficiency and coordination in the area of disaster assistance, emergency preparedness, mobilization readiness, and for other purposes; to the Committee on Government Operations.

By Mr. FISHER (for himself and Mr. STEERS):

H.R. 7230. A bill to amend the Internal Revenue Code of 1954 to eliminate the adjusted gross income limitation for the credit for the elderly and the joint return requirement; to the Committee on Ways and Means.

By Mr. FRASER (for himself, Mr. BYRON, Mr. CORNWELL, Mr. HARRIS, Ms. HOLTZMAN, and Mr. KASTEN):

H.R. 7231. A bill to add certain lands to the Boundary Waters Canoe Area, to redesignate such area as the Boundary Waters Wilderness Area, to withdraw certain authorities for timber harvesting and vehicle use within such area, to increase the payments made to counties respecting such area, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr GOODLING:

H.R. 7232. A bill to amend title 5 of the United States Code with respect to the observance of Memorial Day; to the Committee on Post Office and Civil Service.

By Mrs. HECKLER:

H.R. 7233. A bill to amend title 38 of the United States Code to permit veterans to determine how certain drugs and medicines will be supplied to them; to the Committee on Veterans' Affairs.

By Ms. HOLTZMAN:

H.R. 7234. A bill to amend title 28 of the United States Code to provide for the appointment of a special prosecutor in appropriate cases, and for other purposes; to the Committee on the Judiciary.

By Mr. JEFFORDS (for himself, Mr. WALKER, Mr. BEILENSON, Mr. HARRINGTON, Mr. OBERSTAR, Mr. MCHUGH, Ms. HOLTZMAN, Mr. TSONGAS, Mr. YATRON, Mr. CONTE, Mr. MOFFETT, and Mrs. FENWICK):

H.R. 7235. A bill to establish a national policy concerning agricultural land; to establish an Agricultural Land Review Commission; to establish a demonstration program for protecting agricultural land from being used for nonagricultural purposes; and for other purposes; to the Committee on Agriculture.

By Mr. McCORMACK (for himself, Mr. ANDREWS of North Dakota, Mr. BONIOR, Mr. BOWEN, Mr. BROWN of Ohio, Mr. EDWARDS of California, Mr. ERTEL, Mr. FLORIO, Mr. HOWARD, Mr. HUCKABY, Mr. JONES of Tennessee, Mr. KOSTMAYER, Mr. LAGOMARSINO, Mr. LUKEN, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. NICHOLS, Mr. PEASE, Mr. PEPPER, Mrs. SPELLMAN, Mr. SPENCE, Mr. TRIBLE, Mr. VENTO, Mr. WATKINS, and Mr. YOUNG of Alaska):

H.R. 7236. A bill to encourage energy conservation in residences and in use of electric vehicles; to the Committee on Ways and Means.

By Mr. OTTINGER:

H.R. 7237. A bill to amend the Disaster Relief Act of 1974 and the National Flood Insurance Act of 1968, and for other purposes; jointly, to the Committees on Public Works and Transportation, and Banking, Finance and Urban Affairs.

By Mr. PRITCHARD (for himself and Mr. HANNAFORD):

H.R. 7238. A bill to allow service performed by women as members of telephone operating units of the Army Signal Corps during World War I to be considered active duty in the Army for purposes of all laws administered by the Veterans Administration; to the Committee on Veterans' Affairs.

By Mr. RODINO:

H.R. 7239. A bill to amend chapter 313 of title 18 of the United States Code; to the Committee on the Judiciary.

H.R. 7240. A bill to amend section 1963 of title 28, United States Code to provide for the registration of criminal judgments of fine or penalty; to the Committee on the Judiciary.

By Mr. RODINO (by request):

H.R. 7241. A bill to provide for the defense of judges and judicial officers sued in their official capacities; to the Committee on the Judiciary.

H.R. 7242. A bill to amend section 3146 (relating to release of defendants in noncapital cases prior to trial) of title 18 of the United States Code to provide for the consideration of the safety of other persons or the community in the decision as to whether and on what terms to permit such release; to the Committee on the Judiciary.

H.R. 7243. A bill to amend section 1332(a)(1) of title 28, United States Code, to reduce the jurisdiction of the U.S. district courts in actions between citizens of different States; to the Committee on the Judiciary.

H.R. 7244. A bill to amend the Canal Zone Code with respect to the appointment and service of probation officers, and for other purposes; jointly, to the Committees on the Judiciary, and Merchant Marine and Fisheries.

By Mr. RODINO:

H.R. 7245. A bill to amend the Federal Rules of Criminal Procedure to provide for appellate review of sentences; to the Committee on Rules.

By Mr. SKUBITZ (for himself, Mr. CARTER, Mr. GUYER, Mr. LATTA, Mr. GRASSLEY, and Mr. ASHBROOK):

H.R. 7246. A bill to repeal the provisions of the Postal Reorganization Act and reenact the former provisions of title 39, United States Code; to the Committee on Post Office and Civil Service.

By Mr. SMITH of Iowa:

H.R. 7247. A bill to amend the Internal Revenue Code to regulate and prevent multiple taxation of certain kinds of income; jointly, to the Committees on the Judiciary and Ways and Means.

By Mr. WALSH (for himself, Mr. BLOUIN, Mr. CORNWELL, Mr. DEVINE, Mr. DUNCAN of Tennessee, Mr. EDWARDS of Oklahoma, Mr. ERTEL, Mr. GUYER, Mr. HALL, Mr. LENT, Mr. LAGOMARSINO, Mr. MADIGAN, Mr. MCDONALD, Mr. MOLLOHAN, Mr. RISENHOOVER, Mr. ROBERTS, Mr. WALKER, and Mr. WHITEHURST):

H.R. 7248. A bill to prohibit the expendi-

ture of Federal funds for the conversion to the metric system of measurements posted on highways without a direct authorization by the Congress for such expenditure; to the Committee on Public Works and Transportation.

By Mr. DODD (for himself and Mr. CARR):

H.R. 7249. A bill to amend the Federal charter of the Big Brothers of America to include Big Sisters International, Inc., and for other purposes; to the Committee on the Judiciary.

By Mr. DRINAN:

H.R. 7250. A bill to amend the Comprehensive Employment and Training Act of 1973 to establish a community service employment program for young persons; to the Committee on Education and Labor.

By Mr. GILMAN (for himself, Mr. ADDABBO, Mr. BADILLO, Mrs. COLLINS of Illinois, Mr DERWINSKI, Mr. DRINAN, Mr. ERTEL, Mr. FAUNTROY, Mr. HARRINGTON, Mr. KOSTMAYER, Mr. MITCHELL of Maryland, Mr. MURPHY of Pennsylvania, Mr. NEAL, Mr. RICHMOND, Mrs. SPELLMAN, Mr. STARK, Mr. STOKES, Mr. SIMON, and Mr. WAXMAN):

H.R. 7251. A bill to amend title 39, United States Code, to impose civil penalties against persons who fail to comply with orders of the U.S. Postal Service prohibiting the use of the mails to conduct lotteries or to obtain money or property through false representations, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. OBERSTAR:

H.R. 7252. A bill to amend part I of the Interstate Commerce Act to prohibit certain rate discrimination on the basis of geographical location, for export commodities to be carried by water in export; to the Committee on Interstate and Foreign Commerce.

By Mr. TSONGAS (for himself, Mr. MITCHELL of Maryland, Mr. EVANS of Indiana, Mr. WYLIE, Mr. BROWN of Michigan, Mr. QUAYLE, and Mr. Udall):

H.R. 7253. A bill to reorganize the executive branch of the Government by consolidation of functions and to increase efficiency and coordination in the area of disaster assistance, emergency preparedness, mobilization readiness, and for other purposes; to the Committee on Government Operations.

By Mr. VANDER JAGT:

H.R. 7254. A bill to amend title 18, United States Code, to prohibit the sexual exploitation of children and the transportation in interstate or foreign commerce of photographs or films depicting such exploitation; to the Committee on the Judiciary.

By Mr. CHARLES WILSON of Texas:

H.R. 7255. A bill to amend titles II and XVIII of the Social Security Act to eliminate the waiting period for disabled individuals to become entitled to coverage under the medicare program; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. BLOUIN:

H.J. Res. 468. Joint resolution to amend the Constitution of the United States to provide for balanced budgets and elimination of the Federal indebtedness; to the Committee on the Judiciary.

H.J. Res. 469. Joint resolution proposing an amendment to the Constitution of the United States for the protection of unborn children and other persons; to the Committee on the Judiciary.

Mr. NOLAN (for himself, Mr. BEVILL, Mr. BINGHAM, Mr. PHILLIP BURTON, Mr. CORNWELL, Mr. CORRADA, Mr. DODD, Mr. EDWARDS of Oklahoma, Mr. EDGAR, Mr. EILBERG, Mr. GLICKMAN, Mr. GRASSLEY, Mrs. KEYS, Mrs. LLOYD of Tennessee, Mr. MAZZOLI, Ms. MIKULSKI, Mr. MILLER of California, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. SANTINI, Mr. SPENCE, Mr. STEERS, Mr. BOB WILSON, and Mr. WINN):

H.J. Res. 470. Joint resolution authorizing the President to proclaim the third week of July of 1977, 1978, and 1979, as National Architectural Barrier Awareness Week; to the Committee on Post Office and Civil Service.

By Ms. OAKAR (for herself, Mr. COHEN, Mr. EMERY, Ms. Lloyd of Tennessee, and Ms. MIKULSKI):

H.J. Res. 471. Joint resolution designating the American rose as the national floral emblem of the United States of America; to the Committee on Post Office and Civil Service.

By Mr. ERTEL:

H. Res. 577. Resolution concerning committee hearings on the future telecommunication policy of the Nation; to the Committee on Interstate and Foreign Commerce.

Mr. KASTEN:

H. Res. 578. Resolution to insure that the quality and quantity of free broadcasting service not be impaired; to the Committee on Interstate and Foreign Commerce.

By Mr. McDADE:

H. Res. 579. Resolution recognizing and commending the Lackawanna County Monument Fund Committee; to the Committee on Post Office and Civil Service.

By Mr. PATTISON of New York:

H. Res. 580. Resolution to authorize each Member of the House of Representatives to hire two additional Lyndon Baines Johnson congressional interns and to authorize payment of additional compensation for such interns from the clerk hire allowance; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

146. By the SPEAKER. Memorial of the Legislature of the State of South Carolina, relative to amendments to the Clean Air Act; to the Committee on Interstate and Foreign Commerce.

147. Also, memorial of the Legislature of the Territory of Guam, relative to waiving the visa requirements for aliens visiting Guam for a limited number of days; to the Committee on the Judiciary.

148. Also, memorial of the Legislature of the State of California, relative to Grandparents' Day; to the Committee on Post Office and Civil Service.

149. Also, memorial of the Legislature of the State of Nebraska, relative to transportation of arctic natural gas reserves; jointly, to the Committees on Interior and Insular Affairs, and Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. FORD of Michigan:

H.R. 7256. A bill for the relief of Nicholas Szmorhaj; to the Committee on the Judiciary.

By Mr. WEAVER:

H.R. 7257. A bill for the relief of Dr. Colin K. Wong; to the Committee on the Judiciary.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 10

By Mr. FISHER:

Page 35, strike out lines 6 through 8 and insert in lieu thereof the following:

"§ 7325. Political activities by employees, etc.; prohibition

"(a) An employee may not hold, or be a candidate for—

"(1) any elective public office, unless such office is—

"(A) a part-time elective public office of a State or political subdivision of a State; or

"(B) to be filled in a nonpartisan election; or

"(2) an elective office of a political party or affiliated organization.

"(b) an employee may not engage in political activity—

"(1) in which such employee actively participates in any campaign activity on behalf of, or in opposition to, any candidate or political party (or affiliated organization), unless such activity is in connection with—

"(A) any campaign by any candidate for an elective public office of a State or political subdivision of a State; or

"(B) any nonpartisan election;

Page 35, line 9, strike out "(1)" and insert in lieu thereof "(2)".

Page 35, line 10, strike out "(2)" and insert in lieu thereof "(3)".

Page 35, line 15, strike out "(3)" and insert in lieu thereof "(4)".

Page 35, line 17, strike out "(b)" and insert in lieu thereof "(c)", and" strike out "subsection (a)" and insert in lieu thereof "subsections (a) and (b)".

Page 36, after line 6, insert the following: "The provisions of subsection (a) and of paragraph (1) of subsection (b) shall not apply to the head or the assistant head of an Executive agency or military department or an employee appointed by the President by and with the advice and consent of the Senate."

Page 36, line 7, strike out "(c)" and insert in lieu thereof "(d)".

Page 36, line 8, strike out "(b)" and insert in lieu thereof "(c)".

Page 36, line 10, strike out "(d)(1)" and insert in lieu thereof the following: "(e)(1)".

Page 36, strike out lines 14 through 22 and insert in lieu thereof the following:

"(A) is in connection with a nonpartisan election; or

Page 37, after line 19, insert the following:

"(f) For purposes of this section—

"(1) 'office of a political party' means the position of chairman, vice chairman, secretary, treasurer, committeeman, or any other substantially similar position of any political party or affiliated organization;

"(2) 'nonpartisan election' means any election—

"(A) in which no candidate is to be nominated or elected as a representative of any political party or affiliated organization which was identified with any candidate who received any vote in the last preceding election at which presidential electors were selected; or

"(B) on any issue, including a constitutional amendment, referendum, or any other issue, which is not identified with any political party or affiliated organization; and

"(3) 'State' means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands, or any other territory or possession of the United States.

Page 37, beginning on line 23, strike out "elective office", and insert in lieu thereof "any elective office specified in subparagraph (A) or (B) of section 7325(a)(1) of this title".

Page 38, on line 1 and line 6, strike out "elective office" and insert in lieu thereof "any elective office specified in subparagraph (A) or (B) of section 7325(a)(1) of this title".

Page 49, in the item relating to section 7325 in the section analysis following line 8,

strike out "on duty" and insert in lieu thereof "by employees".

By Mr. GLICKMAN:

Page 30, after line 12, strike out all that follows down through page 31, line 22, and insert in lieu thereof the following:

"(9) 'restricted position' means any position with respect to which there is in effect a determination by the Commission, by regulation, that—

"(A) the public interest requires a restriction on the political activity of any employee holding such positions; and

"(B) the duties and responsibilities of such position—

"(i) require such employee, as a substantial part of his official activities, to engage in—

"(I) the enforcement of any civil or criminal law;

"(II) the inspection or auditing of the activities of any person;

"(III) the contracting for goods or services for the Government, including the procurement or sale of real or personal property;

"(IV) the awarding, administration, or monitoring of licenses, grants, subsidies, or other benefits; or

"(V) foreign intelligence or national security activities; and

"(ii) (I) in the case of any enforcement action referred to in subparagraph (B) (i) (I) of this paragraph or any inspection or audit referred to in subparagraph (B) (i) (II) of this paragraph, include the authority to determine who shall be the subject of any such action, include the actual carrying out of any such action, or include the authority to make a final determination with respect to any such action; or

"(II) in the case of any Government contract referred to in subparagraph (B) (i) (III) of this paragraph or any Government license, grant, subsidy, or other benefit referred to in subparagraph (B) (i) (IV) of this paragraph, include the authority to make any substantial determination with respect to any such contract or benefit which involves any funds or other interest having a value which exceeds $25,000; or;

"(III) in the case of any foreign intelligence or national security activity referred to in subparagraph (B) (i) (V) of this paragraph, the primary function of the agency, or office, bureau or entity within an agency relates to such activity.

Page 52, after line 2 insert:

SEC. 4. The Civil Service Commission shall study and review the effects of the amendments made by the Act on:

(1) the level of participation by Federal employees in activities relating to Federal, State, and local elections;

(2) the merit system, particularly the hiring, termination, or advancement of Federal employees, and

(3) matters generally affecting and contributing to the improper use of official influence or official information by Federal employees as prohibited under this Act.

The Commission shall report to the Congress not later than March 31, 1979, and March 31, 1981, the results of such study and review any findings therefrom together with such legislative or administrative recommendations as they consider appropriate.

By Mr. HARRIS:

Page 37, after line 19 insert the following:

"§ 7326. Personnel actions; improper recommendations

"(a) No employee may accept or consider, or influence or direct, or attempt to influence or direct any other employee to accept or consider, with respect to any personnel action, any recommendation unless—

"(1) the recommendation is furnished pursuant to a request made by an authorized representative of the United States solely to determine whether the individual involved in the personnel action meets the loyalty, suitability, and character requirements for employment; or

"(2) the recommendation—

"(A) is furnished pursuant to a request of an employee who is responsible for taking (or directing others to take), recommending, processing, or approving the personnel action; and

"(B) consists solely of an evaluation of the work performance, ability, aptitude, character, or general qualifications of the individual involved in the personnel action.

"(b) (1) Any employee who receives a written recommendation prohibited by subsection (a) of this section shall return such recommendation to the person who provided it, with an appropriate indication that the acceptance or consideration of such recommendation would be in violation of this section.

"(2) Any employee who receives an oral recommendation which is prohibited by subsection (a) of this section shall advise, in an appropriate manner, the person providing such recommendation that the acceptance or consideration of such recommendation would be in violation of this section.

"(c) For the purpose of this section—

"(1) 'personnel action' means—

"(A) an appointment,

"(B) a promotion,

"(C) a removal, suspension, furlough without pay, or reduction in rank or pay,

"(D) a transfer, assignment, or reassignment,

"(E) a reinstatement,

"(F) a restoration,

"(G) a reemployment, or

"(H) a performance evaluation,

with respect to an employee in, or applicant or eligible for, a position in the competitive service;

"(2) 'recommendation' means any communication, oral or written, made directly or indirectly by—

"(A) a Member of Congress, any other individual who holds an elective office, or a candidate;

"(B) a Congressional employee, as defined in section 2107 of this title (determined without regard to whether the employee's pay is paid by the Secretary of the Senate or the Clerk of the House of Representatives);

"(C) an employee appointed by the President or an individual referred to in section 7325(b) (1) or (2) of this title; or

"(D) an employee in a position which is excepted from the competitive service and which is designated by the Commission as being of a confidential or policy-determining character;

"(3) 'recommendation' does not include—

"(A) an inquiry which is limited solely to a request—

"(i) for a statement on the status of any personnel action; or

"(ii) for an explanation of the basis on which a personnel action has been taken; and

"(B) a statement of a type which the Commission determines, by regulation, should be excepted from the application of section (a) of this section in the interest of the orderly and efficient functioning of the Government, but only if such statement is made in such form and manner as the Commission shall determine, by such regulation, to be appropriate.

Strike out "or 7325" at each of the following places and insert in lieu thereof "7325, or 7326"; page 38, on line 18; page 39, on lines 11 and 16; page 40, on line 11; and page 45, on line 18.

Redesignate the sections following the new section 7326 accordingly (including any references to such sections).

By Mr. LEVITAS:

On page 47, strike out line 23 and all that follows through line 4 on page 48 and insert in lieu thereof the following:

"(a) (1) The Civil Service Commission shall promulgate such rules and regulations as may be necessary to carry out its responsibilities under this subchapter.

With promulgation or repromulgation of any such rule or regulation, the commission shall transmit a copy thereof to the Secretary of the Senate and the Clerk of the House of Representatives. Except as provided in paragraph (2), any such rule or regulation shall not become effective, if—

"(A) within 90 calendar days of continuous session of Congress after the date of promulgation, both Houses of Congress adopt a concurrent resolution, the matter after the resolving clause of which is as follows: That Congress disapproves the rule or regulation promulgated by the Civil Service Commission dealing with the matter of , which rule or regulation was transmitted to Congress on , the blank spaces therein being appropriately filled; or

"(B) within 60 calendar days of continuous session of Congress after the date of promulgation, one House of Congress adopts such a concurrent resolution and transmits such resolution to the other House, and such resolution is not disapproved by such other House within 30 calendar days of continuous session of Congress after such transmittal.

"(2) If at the end of 60 calendar days of continuous session of Congress after the date of promulgation of a rule or regulation, no committee of either House of Congress has reported or been discharged from further consideration of a concurrent resolution disapproving the rule or regulation, and neither House has adopted such a resolution, the rule or regulation may go into effect immediately. If, within such 60 calendar days, such a committee has reported or been discharged from further consideration of such a resolution, or either House has adopted such a resolution, the rule or regulation may go into effect not sooner than 90 calendar days of continuous session of Congress after its promulgation unless disapproved as provided in paragraph (1)(A).

"(3) The commission may not promulgate a new rule or regulation identical to one disapproved pursuant to this section unless a statute is adopted affecting the commission's powers with respect to the subject matter of the rule or regulation.

"(4) If the commission proposes a new rule or regulation dealing with the same subject matter as a disapproved rule or regulation, the commission shall comply with the procedures required for the issuance of a new rule or regulation.

"(5) For the purpose of this subsection, calendar days of continuous session of Congress means consecutive calendar days of a session of Congress the continuity of which is broken only by an adjournment sine die, excluding days on which either House is not in session because of an adjournment of more than 3 days to a day certain.

EXTENSIONS OF REMARKS

FEDERAI EMERGENCY ASSISTANCE AND PREPAREDNESS ADMINISTRATION ACT OF 1977

HON. PAUL E. TSONGAS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 16, 1977

Mr. TSONGAS. Mr. Speaker, I am pleased to introduce today the Federal Emergency Assistance and Preparedness Administration Act of 1977.

This bill will consolidate emergency preparedness powers into one agency instead of the existing three. The result will be better protection and service to Americans during times of national emergency—and a savings of $15 million annually.

Mr. Speaker, this has already been a year of unprecedented national emergencies. There has been an exceptionally severe winter causing ununexpected shortages in heating fuel, industrial shutdowns, and millions of dollars of property damage as well as personal hardship; a severe drought in the Western part of the country necessitating water rationing and other emergency measures; and a series of disastrously large oil spills. They have focused the attention of the Nation on how our Government prepares itself for and reacts to the occurences of unexpected emergency situations.

The fact is that although we will have survived these emergencies, our preparedness and recovery efforts are not adequate.

Right now our Federal preparedness programs are disjointed, duplicative, inefficient, wasteful, and at times even conflicting. Three different agencies, the Federal Preparedness Agency of the General Services Administration, the Federal Disaster Assistance Administration of the Department of Housing and Urban Development, and the Defense Civil Preparedness Administration of the Department of Defense all compete for time and attention. The result is confusion.

Forty-three Governors have reported to the Joint Committee on Defense Production that this confusion causes severe problems in administering State emergency programs. One witness told the committee that his State agency had to prepare 7 pounds of paperwork in order to get Federal assistance in obtaining a $50 siren.

There are literally dozens of committees, interagency task forces, and study groups all working on Federal preparedness planning. But no one is commanding the ship. No one is coordinating or making overall policy decisions. No one in the executive branch can even determine exactly how much the Government is spending each year on preparedness programs—not even the Director of the Federal Preparedness Agency, who theoretically has control.

For many years the civil preparedness program—including preparedness for natural disasters, economic crises, industrial and transportation accidents for industrial mobilization, and for civil defense—has been based on the concept of a partnership between the Federal Government and State and local governments. The Federal Government encouraged States and communities to form single agencies to carry out all emergency services within their jurisdictions. Similarly, the Federal Government maintained a centralized policy and planning mechanism in the old Office of Emergency Preparedness in the Executive Office of the President.

Under this system, the close connection between emergency preparedness, especially in terms of civil defense and industrial mobilization, and national defense, was fully recognized in that the Director of the Office of Emergency Preparedness had a seat on the National Security Council. This is no longer the case today.

The present situation is the product of a long list of Executive Orders and reorganization plans spanning the past 27 years. Since 1950, Congress has enacted a number of significant statutes, creating Federal responsibilities for preparing for and reacting to emergency situations. The situations covered range from civil defense against nuclear attack to emergency relief in case of floods or tornados or other natural disasters, to the continuity of Government subsequent to nuclear attack. However, in drafting these various statutes, Congress has failed to address itself to the question of how to organize these responsibilities within the executive branch. Rather, statutes by and large have simply vested authority in the President himself.

For example, in 1969, through a single Executive Order (E.O. 11490), President Nixon distributed emergency preparedness responsibilities to 28 different agencies—since increased to 37—of the Federal Government. At that time, an Office of Emergency Preparedness existed in the Executive Office of the President to oversee the implementation of those responsibilities by these 37 agencies. However, just 4 years later, this Office was abolished through still another reorganization plan—plan No. 1 of 1973—and its functions were decentralized to less authoritative entities within the Government. As a result, each of those 37 agencies is currently answerable in their performance of these functions only to the General Services Administration, an agency with no statutory authority whatsoever to exercise supervision or dictate uniform policy over this area.

Another sign of institutional fragmentation is found in the structure of disaster relief programs. The "Catalogue of Domestic Assistance" published by the Office of Management and Budget now lists over 45 programs administered by 15 departments and agencies of the Government, again, without centralized supervision. State emergency relief agencies often find themselves confused in dealing with such an arbitrary array of bureaucracy. There is no central point of contact available to applicants for Federal emergency assistance. As a result, localities are often frustrated in obtaining necessary assistance, and American citizens suffer needlessly.

While we clearly have the programs to deal with emergency disaster situations, the haphazard and chaotic structuring of those programs has undermined their effectiveness.

As if these difficulties were not enough, Mr. Speaker, sharp splits have developed between those agencies of the Government responsible for preparing and planning for emergencies and those responsible for reacting to them. Preparedness functions have been isolated in those agencies, particularly DCPA and FPA, which are primarily concerned with civil defense and wartime preparedness, to the exclusion of natural disasters or other more commonplace emergencies. However, the major source of State preparedness funding emanates from just these agencies, and particularly DCPA preparedness grants. In the past, States and localities have used DCPA funds to establish procedures and organizations for both civil defense and natural disaster preparedness. Last year, however, in an effort toward organizational "reform," the States were forbidden from using DCPA funds for any purpose other than wartime civil defense preparedness. As a result, virtually all Federal assistance for natural disaster preparedness has dried up.

Mr. Speaker, the Federal Emergency Assistance and Preparedness Act of 1977 will have the net effect of eliminating two unnecessary Federal agencies and saving $15 million annually. There will be significant savings by reductions in overhead costs and possibly some manpower efficiencies as well. At the same time, the essential national emergency preparedness programs will be upgraded and improved.

Under this bill, a new agency will be created, the Federal Emergency Assistance and Preparedness Administration, with a director as a permanent member of the National Security Council. This new agency would have responsibility in cases of major disasters including hurricane, tornado, storm, flood, highwater, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, drought, fire, explosion, civil disturbance, sabotage, or any other catastrophe which causes or may cause substantial damage or injury to civilian property or persons. It also will have jurisdiction over mobilization of the civilian economy—in times of war—and civil preparations for nuclear attack.

This legislation, in large measure, is the outgrowth of an extensive review undertaken last year by the Joint Committee on Defense Production. Among several major problems which that inquiry revealed was the problem of organization at the Federal level. The committee's report, which was released last week, details these organizational shortcomings in specific terms. This bill is based on the joint committee's recommendations for remedying these organizational deficiencies.

This bill is not so much an effort to reform the organization of the Federal preparedness effort as it is to restore to it a form which it has had in the past

and which, through the variety of changes that I have enumerated, it has now lost.

Mr. Speaker, the joint committee's year-long review of this area uncovered several additional findings.

First, there is no one in the executive branch who can state exactly how much the Government is spending each year on its preparedness efforts. So nominal is the policy control of the Director of Federal Preparedness that when the administration decided to make deep cuts in the civil defense budget, it failed to inform the Director of FPA or seek his advice on the planned reductions.

Second, the authority for many preparedness activities—authority formerly delegated to the Director of Emergency Preparedness—has been retained by the President under an executive order issued in 1973. It is unrealistic to expect the President to devote time on an ongoing basis to these important but not always pressing responsibilities. The result is that they have been neglected.

Indeed, in its hearings, the joint committee found that many preparedness functions assigned to Cabinet-level departments have been neglected. This appears to be a consequence of both overdelegation and underdelegation. In the press of other business, the President and his staff have apparently been unable to adequately oversee on emergency preparedness activities. That authority which has been delegated has been distributed in so diffuse a way that accountability has been lost. Simply stated, the problem is one of a lack of centralized policy and planning control.

Third, the committee found that splitting up the preparedness effort into three separate agencies located in three larger departments—the Federal Preparedness Agency in the General Services Administration, the Federal Disaster Assistance Administration in HUD, and the Defense Civil Preparedness Agency in the DOD—has had two negative results. First, it submerged these agencies so deeply in departments with essentially nonemergency missions that they were unable to get the attention they needed at the Cabinet-level. Lack of access has hampered their effectiveness. At the same time, the three-way split has confounded State and local agencies in their efforts to work with the Federal Government.

The existence of three separate agencies frustrates the coordination that is so vital of effective emergency preparedness. During the committee's oversight review, all of the State and territorial Governors were queried about the Federal preparedness program. Forty-three Governors reported that this three-way split causes severe problems in administering State emergency programs and only one reported that it causes no problems at all.

In its hearings, the joint committee heard from State emergency services directors who told us specifically how their own efforts were frustrated by the duplication of agencies at the Federal level.

According to the State directors, the biggest sources of trouble are the conflicting priorities and directives of the Federal preparedness organizations, as well as the duplication of paperwork which the State agencies must process.

We found several dozen committees, interagency task forces, and study groups trying to sort out the work of the many bureaucracies involved in preparedness programs but we did not find any central coordinating and policymaking authority.

In other hearings the joint committee learned about erosion of the defense mobilizaton base. This has come about for many of the same reasons that have undermined Federal efforts to cope with natural disasters. Various parts of the defense industrial base planning system are strewn throughout the Government—in the Commerce Department, in GSA, in the Labor Department, in the DOD, and elsewhere. Centralized control of these activities is largely a fiction. The lack of a central authoritative organization for overseeing the defense implication of the peacetime civilian economy means that the agencies spend precious time and resources trying to harmonize their own interests rather than monitoring and coordinating the activities of the industrial base. Here, as with other aspects of civil emergency preparedness, conflicts in the program priorities of different departments and agencies lead to lack of agreement about preparedness priorities and thus to misallocated resources, programmatic confusion, and ineffectiveness.

Mr. Speaker, the fragmented Federal emergency preparedness effort is not responsive to the needs of our citizens; it is not effective. It has not kept pace with the many new types of disaster or crisis that threaten life and property in a complex, modern society. Among these are large-scale transportation accidents, suddden resource shortages, nuclear powerplant accidents, sabotage, and terrorism.

And, as presently constituted, the Federal emergency preparedness effort wastes money. How much, we cannot be sure, because there are no fully accurate figures on total disaster preparedness spending. But the administration of three preparedness agencies duplicates overhead costs. And we can be sure that there is something wrong in our spending priorities when one Federal agency can spend millions to build an underground bunker for storing currency against a nuclear attack, while the State and local governments have difficulty getting funds for drought relief or surplus Federal equipment to aid in coping with other natural disasters.

This bill, which I am introducing today, will go a long way toward eliminating these problems, conflicts, and inequities. It will provide a central administration for all types of emergency preparedness policy, planning, and programs. It will give this administration policy and budget control over preparedness activities which, for practical reasons, should be carried out by other departments and agencies. It provides for a unified and comprehensive approach to all preparedness planning. It recognizes that the security of life and property is endangered by many types of natural and manmade events by restoring to the National Security Council the official of Government primarily responsible for emergency preparedness. And it mandates savings in overhead costs by providing spending ceilings for the new Federal Emergency Assistance and Preparedness Administration.

This legislation is based on a long and careful study of the past development and present condition of American emergency preparedness organizations and programs. It seeks to build on the wisdom of our past experience in this area, and to take into account of the many more recent developments that affect the safety of our lives and property. I believe that my colleagues will find that it answers our national preparedness needs very well and deserves expeditious consideration:

H.R. —

A bill to reorganize the executive branch of the Government by consolidation of functions and to increase efficiency and coordination in the area of disaster assistance, emergency preparedness, mobilization readiness, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That this Act may be cited as the "Federal Emergency Assistance and Preparedness Administration Act of 1977".

TABLE OF CONTENTS

Sec. 1. Title.
Sec. 2. Definitions.
Sec. 3. Establishment.
Sec. 4. Director.
Sec. 5. Organization.
Sec. 6. Functions.
Sec. 7. Coordination with other Federal agencies.
Sec. 8. Coordination with States and localities.
Sec. 9. Transfers of functions and authorities.
Sec. 10. Annual reports.
Sec. 11. Authorization of appropriations.
Sec. 12. Amendment of preparedness programs.

DEFINITIONS

SEC. 2. As used in this Act—

(1) the term "emergency preparedess" refers to all programs, functions, activities, or expenditures of the Federal Government undertaken for the purpose of preparing, warning, planning, stockpiling, training, or othrwise establishing contingency measures against damage or danger to life, limb, property, the environment, or the economy, or the mitigation of such damage or danger which might result from the occurrence of any one or a combination of—

(A) a major disaster or emergency as defined in the Disaster Relief Act of 1974;

(B) an industrial, transportation, or simlar accident;

(C) an economic crisis resulting from any commodity shortage (including an energy shortage), industrial shutdown, or other disruption caused by any occurrence referred to in this subsection or by any other fortuitous or uncontrollable circumstance resulting in severe personal, business, or community hardship;

(D) the effect on life or property of an act of sabotage or terrorism;

(E) an accident involving radioactive material;

(F) any such emergency or disaster occurring outside the United States or its territories for which the United States might wish to donate assistance; or

(G) the effect on civilian life and property of a military or industrial mobilization or an attack upon the United States involving either conventional or nuclear weapons;

(2) the term "disaster assistance" refers to all programs, functions, activities, or expenditures of the Federal Government undertaken for the purpose of facilitating

recovery from or repair of damage inflicted by or providing immediate relief during the course of any of the occurrences enumerated in clause (1); and

(3) the term "Federal agency" means any department, agency, or other authority of the executive branch of the Government or any subdivision or office thereof.

ESTABLISHMENT

SEC. 3. There is hereby established as an independent establishment of the executive branch of the Government the Federal Emergency Assistance and Preparedness Administration (hereinafter referred to as the "Administration").

DIRECTOR

SEC. 4. (a) The Administration shall have a Director and Deputy Director who shall be appointed by the President, by and with the advice and consent of the Senate, without regard to political affiliation and solely on the basis of fitness to perform the duties and functions of the office. The Deputy Director shall act for and exercise the powers of the Director during the absence or disability of the Director.

(b) The Director shall be responsible for the exercise of all powers and the discharge of all duties of the Administration. The Director shall have authority and control of all of the staff of the Administration and their activities. The Director shall maintain budgets and allocate available funds as appropriate in carrying out the provisions of this Act.

(c) The Director shall be a permanent member of the National Security Council and shall report to the President through his Domestic Council for other than national security matters.

(d)(1) Section 5314 of title 5, United States Code, is amended by adding at the end thereof the following:

"(66) Director, Federal Emergency Assistance and Preparedness Administration.".

(2) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following:

"(114) Deputy Director, Federal Emergency Assistance and Preparedness Administration.".

ORGANIZATION

SEC. 5. (a) For purposes of carrying out his responsibilities under this Act, the Director may delegate such of his duties and authorities as he sees fit to subordinates within the Administration and to the Deputy Director.

(b) The Director shall establish within the Administration the following Offices to assist him in carrying out the provisions of this Act and the functions transferred to the Administration by this Act:

(1) An Office of Disaster Assistance Operations to implement those functions of the Administration relating to emergency relief for areas declared by the President pursuant to his authority under the Disaster Relief Act of 1974 to be major disaster areas or areas under states of emergency.

(2) An Office of Emergency Preparedness to implement those functions of the Administration related to preparing the American people against contingencies as defined in section 2(1).

(3) An Emergency Information Center to implement the responsibilities of the Administration under sections 6(10), 6(11), 8(a)(4), and 8(a)(6).

(4) An Office of Program Evaluation to review on a continuing basis all programs, functions, and activities of the Administration, including both those under the direct authority of the Administration and those within the supervisory or coordinating functions of the Director under section 7 of this Act, and to make recommendations, based on its review, to the Director for the improvement of such programs, functions, and activities through better coordination, consolidation, institutional realinement, programmatic amendment, or otherwise through legislation or agency action.

FUNCTIONS

SEC. 6. The Administration shall—

(1) implement all Federal disaster assistance programs and authorities transferred to the Administration by section 9;

(2) implement all Federal emergency preparedness programs and authorities transferred to the Administration by section 9;

(3) coordinate all programs, functions, and activities of the Federal Government related to emergency preparedness and disaster assistance;

(4) develop and implement a coherent overall policy framework encompassing all functions of the Administration, and in such framework—

(A) identify priorities for Federal activity,

(B) integrate the preparedness and assistance functions of the Administration to provide a unified approach to Federal emergency activities,

(C) provide adequate emphasis to civil defense and other nuclear preparedness programs, and

(D) identify and integrate the roles of the States and localities in the overall emergency preparedness and disaster assistance effort;

(5) carry out comprehensive planning and policy formulation with respect to industrial mobilization, economic readiness, and such other civil preparedness functions as may be assigned by the President for emergencies and contingencies relating to the national defense and for supervising and coordinating the implementation of Federal economic and industrial mobilization programs;

(6) develop, in coordination with other branches, departments, and agencies of the Federal Government, contingency plans for the continuity of the Federal Government and for supervising the implementation of these plans;

(7) establish and maintain training programs for personnel from public agencies and private institutions concerned with predicting, planning for, and preparing for emergencies and disasters or with providing assistance before, during, or after the occurrence of such emergencies and disasters;

(8) develop, and where appropriate, implement, in consultation with representatives of appropriate Federal agencies contingency plans for fulfilling its responsibilities under this Act, in a manner which—

(A) reflects priorities established under clause (4),

(B) concentrates available resources against those needs most common and costly, and

(C) incorporates the full range of contingency and emergency situations within the jurisdiction of the Administration;

(9) initiate reviews of Federal emergency preparedness and disaster assistance programs and make periodic recommendations regarding how such programs can be improved through greater consolidation, coordination, institutional realinement, programmatic amendment, or otherwise by legislation or Federal agency action;

(10) undertake research and development activities leading to the improvement of programs under the cognizance of the Administration, including generic studies of disasters, emergencies, crises, and other contingencies which adversely affect life and property, and provide the results of such research and development activities to Federal, State, local, and private agencies, as appropriate; and

(11) monitor all programs, functions, and activities of the Federal Government concerned with collecting and analyzing data on natural, economic, industrial, agricultural, technological, scientific, and other phenomena and trends, including data on materials availability and consumption, for the purpose of assisting in the fulfillment of the Administration's responsibilities for predicting, planning for, and preparing for industrial and economic mobilization, strategic stockpiling, economic crises, and emergencies and disasters as defined under section 2(1) of this Act, and assemble and maintain current information relevant to such purposes in a central location and make available to the public and to interested public and private agencies on a periodic basis new information assembled pursuant to this clause.

COORDINATION WITH OTHER FEDERAL AGENCIES

SEC. 7. (a) All expenditures related to emergency preparedness and mobilization authorities under the Defense Production Act of 1950, as amended, as delegated and assigned to Federal agencies under Executive Order 11490 and 10480, as amended, shall be included within the annual budget and appropriation of the Administration, and the Director shall be responsible for coordinating and supervising the implementation of programs and activities pursuant to such authorities.

(b) Upon a declaration by the President, pursuant to the Disaster Relief Act of 1974, of a major disaster or a state of emergency, the Director shall coordinate and supervise all programs functions, and activities of the Federal Government to provide assistance under such declaration. The head of each Federal agency having jurisdiction of any such program, function, or activity, shall cooperate with the Director in fulfilling his responsibilities under this section.

(c) The head of each Federal agency which has jurisdiction of a program or function relating to emergency preparedness or disaster assistance, including those referred to in subsection (b) of this section, shall, within 30 days of the enactment of this section and thereafter at least annually, report to the Director on the status, funding, and activities of each such program or function. The Director, at least annually, shall cause to be published a compilation of reports submitted to him under this subsection. Such compilation shall be made available to the public on such terms as the Director shall prescribe.

(d) The head of each Federal agency which has jurisdiction of a program, function, or activity relating to emergency preparedness or disaster assistance, including international disaster assistance, shall assist and cooperate with the Director in developing contingency plans under section 6(6) and 6(8), and shall likewise assist and cooperate in the implementation of those plans where so requested by the Director.

(e) The head of each Federal agency which has jurisdiction of any program, function, or activity concerned with collecting and analyzing data described in section 6(11) shall cooperate with the Director in fulfilling his responsibilities under that subsection.

COORDINATION WITH STATES AND LOCALITIES

SEC. 8. (a) The Director shall assist States and localities in applying for and participating in all Federal programs relating to emergency preparedness and disaster assistance. This assistance shall include—

(1) providing relevant information and materials to applicants and participants;

(2) maintaining a library of current information to be made available to States and localities;

(3) providing education services and programs to States and localities;

(4) monitoring all Federal agencies concerned with studying natural phenomena and predicting natural occurrences and potential natural disasters, and providing such information on a regular basis to States and localities;

(5) establishing within the Administration a single point of contact for all State, local,

and private preparedness or relief organizations in order to facilitate coordination of programs and standards among different types of government and organizations and to improve the provisions of Federal services;

(6) providing on a regular basis such information as shall have been assembled under section 6(11) of this Act which might be useful to States and localities in predicting, planning for, or preparing for emergencies or disasters; and

(7) providing liaison services to other Federal agencies.

(b) The Director shall develop improved avenues of Federal-State cooperation, including those authorized under the Joint Funding Simplification Act of 1974, and implement these methods where applicable.

(c) The Director shall consult with States and localities in carrying out his functions under this section.

TRANSFERS OF FUNCTIONS AND AUTHORITIES

SEC. 9. All functions, authorities, files, and accounts of the Defense Civil Preparedness Agency in the Department of Defense, the Federal Disaster Assistance Administration in the Department of Housing and Urban Development, and the Federal Preparedness Agency, the Stockpile Storage Division and such other elements as are related to stockpiling in the General Service Administration, are hereby transferred to and vested in the Administration.

ANNUAL REPORTS

SEC. 10. (a) Not later than December 31 of each year, the Director shall report to the President and the Congress on activities pursuant to the provisions of this Act during the preceding fiscal year. Such reports shall include—

(1) an analysis of all funds expended or obligated under each of the programs or activities assigned to the Administration by this Act;

(2) an assessment of the Administration's efforts in providing assistance following each declared major disaster or state of emergency including an accounting of assistance provided, and progress that has been made in facilitating recovery from such declared major disaster or state of emergency;

(3) progress under emergency preparedness programs assigned to the Administration;

(4) a description of activities undertaken by the Administration toward improving coordination and cooperation among agencies of the Federal Government and between the Federal and State and local governments relating to activities under this Act;

(5) recommendations, as appropriate, of the Office of Program Evaluation under section 5(b)(4); and

(6) such other recommendations as the Director deems appropriate and such information as may be useful in assessing the progress of the Administration.

(b) Each report required to be submitted to the Congress by this Act shall be referred to the standing committee or committees having jurisdiction over any part of the subject matter of the report.

AUTHORIZATION OF APPROPRIATIONS

SEC. 11. There are authorized to be appropriated to the Federal Emergency Assistance and Preparedness Administration through the close of fiscal year 1981—

(1) for all expenses except those set forth under paragraphs (2) and (3), $126,700,000 for fiscal year 1978, $129,700,000 for fiscal year 1979, $132,700,000 for fiscal year 1980, and $135,700,000 for fiscal year 1981;

(2) for expenses in carrying out the functions of the Administration under the Disaster Relief Act of 1974, not including administrative expenses, such sums as may be necessary; and

(3) for expenses in carrying out the functions of the Administration under section 7(a) of this Act, $38,000,000 for each of the fiscal years 1978, 1979, 1980, and 1981.

AMENDMENT OF PREPAREDNESS PROGRAMS

SEC. 12. (a) Section 2 of the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2251) is amended—

(1) by striking out ", in this thermonuclear age," in the first sentence of such section; and

(2) by inserting "or from major disasters" immediately after "from attack" in the second sentence of such section.

(b) Section 3 of the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2252) is amended—

(1) by inserting immediately after paragraph (a) the following:

"(b) The term 'major disaster' means any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, drought, fire, explosion, civil disturbance, sabotage, or other catastrophe in any part of the United States which causes, or which may cause, substantial damage or injury to civilian property or persons.".

(2) by redesignating paragraphs (b), (c), (d), (e), (f), and (g) as paragraphs (c), (d), (e), (f), (g), and (h), respectively;

(3) by amending paragraph (c) (as redesignated by paragraph (2)) by—

(A) inserting "or by a major disaster" in clause (1) immediately after "attack upon the United States"; and

(B) inserting "or major disaster" after "attack" each place it appears in such paragraph after clause (1); and

(4) by amending paragraph (d) (as redesignated by paragraph (2)) by striking out the period at the end of the first sentence and all that follows through "civil defense plans".

(c) Section 201 of the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2281) is amended—

(1) by striking out "of enemy attacks to the civilian population" in paragraph (c) and inserting in lieu thereof "to the civilian population of any attack or major disaster";

(2) by inserting "and major disasters" in paragraph (d) immediately after "effects of attacks";

(3) by striking out "June 30, 1976" in the second proviso to paragraph (e) and inserting in lieu thereof "September 30, 1980";

(4) by inserting "or major disaster" in paragraph (g) immediately after "attack" each place it appears;

(5) by striking out "June 30, 1976" in the fourth proviso to paragraph (h) and inserting in lieu thereof "September 30, 1980";

(6) by striking out "quarterly" in the tenth proviso to paragraph (i) and inserting in lieu thereof "annually".

(d) Section 205 of the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2286) is amended—

(1) by inserting "and the areas which may be affected by major disasters" in paragraph (d)(1) immediately after "target and support areas"; and

(2) by striking out "June 30, 1976" in subsection (h) and inserting in lieu thereof "September 30, 1980".

(e) Section 307 of the Federal Civil Defense Act of 1950 (50 U.S.C. App. 2297) is amended by striking out "June 30, 1974" and inserting in lieu thereof "September 30, 1980".

U.S.S.R. STANDS TO PROFIT FROM SALES OF ORE TO U.S.

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1977

Mr. HARRY F. BYRD, JR. Mr. President, I have recently come across an article which echoes many of the concerns I have expressed concerning the embargo on Rhodesian chrome.

It was written by Robert S. Allen, a nationally syndicated columnist.

I ask unanimous consent that the full text of this article be printed in the Extensions of Remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S.S.R. STANDS TO PROFIT FROM SALES OF ORE TO U.S.

(By Robert S. Allen)

There is a strikingly significant omission in Administration gloating over repeal of the Byrd Amendment that gave the U.S. free rein to import Rhodesian metallurgical chrome.

This is the exceedingly moot question—just who won what?

Examination of what's behind this glaring silence quickly reveals the stark answer:

Far and away the principal gainer is Russia—which once again will have a highly profitable near-monopoly as this country's main supplier of metallurgical chrome, essential in the production of missiles, nuclear submarines, jet aircraft, other key weapons and high-grade steel products.

At the same time, the outstandingly heavy loser will be the American consumer who once again will bear the rap for virtually certain rapacious Russian price gouging.

The record is irrefutably predictable on that.

Before 1966, when the United Nations, under Moscow-Arab-African bloc domination, imposed economic sanctions against Rhodesia, Soviet chrome sold at $27 a ton. By 1971, when Sen. Harry Byrd (Ind.-Va.) persuaded Congress to approve his amendment voiding compliance with the United Nations ban, the Russian price had zoomed 183 per cent.

But with Rhodesian chrome once again being shipped to the U.S., the Soviet price declined markedly—until 1974.

That year, the Senate, under vigorous spurring by former Secretary Henry Kissinger, junked the Byrd Amendment and it looked as if the House would follow suit.

Results: Russia doubled its price to $160 a ton.

But the House balked, and the repeal legislation was voted down—taking with it the Soviets' vaulting chrome profits.

Now, of course, the way is wide open for that profiteering to be resumed—at the expense of U.S. consumers who will have to pay in higher weapons and steel costs.

It will be one more deep notch in the inflation gouge.

Grimmest irony of all is that the U.N.'s sanctions have been ignored and violated from the very start. Not only that, but the worst offenders have been the loudest embargo invokers.

High on the list are none other than Russia and the East European satellites—notably East Germany and Czechoslovakia, with others not far behind. In January of this year, a classified United Nations report flatly charged the Soviet Union and four satellites with large-scale violations of the Rhodesian sanctions.

It is interesting to note that this U.N. document got short shift from the media—which never pass up a chance to publicize anything critical of the U.S. But somehow, this report was conveniently disregarded.

That intriguing indifference has characterized the publicizing of violations of the Rhodesian embargo throughout.

Since its imposition in 1966, the United Nations has recorded around 75 formal complaints. Among those charged with violations are Russia, four Eastern European satellites, Britain, Red China, France, West Germany, and most of the black African countries—in the van of denouncers of white ruled Rhode-

sia and demanding rigorous restrictions against it.

"I find it ironic," says Sen. Byrd, "that countries most vocal against U.S. importation of Rhodesian chrome have been in the front rank of violators of the U.N. sanctions. It is these same countries that in arguing for the imposition of the embargo characterized Rhodesia as a 'threat to world peace.'

"Rhodesia is a small, landlocked country, with six million people, virtually no military assets and a police force that is the mainstay for keeping order. That force, incidentally, is predominantly black. There is no way in the world Rhodesia can be considered a threat to world peace. It was ludicrous for the U.N. to so declare."

But it did—and other equally asinine, biased and frenetic antics that have cost U.S. taxpayers hundreds of millions of dollars.

While the United Nations castigated Rhodesia for so-called "minority rule," the characteristically hypocritical world organization has yet to criticize or do anything about outright dictatorial rule in the controlling Soviet-Arab-African bloc. Of the 49 African countries, 15 are iron-fisted military dictatorships and 29 others one-party authoritarian states.

Claims of Byrd Amendment opponents that new technological processes now make it possible to use low-quality chrome are plausible to some extent. Large steelmakers that can afford the expensive equipment necessary for these processes can use inferior-quality chromium. But that doesn't apply to the hundreds of small U.S. factories that make stainless and other high-grade steel. They are compelled to use chromium of the fine type available in large quantities only from Rhodesia, South Africa and Russia. It is these small businesses that will be hurt by the reimposition of the United Nations embargo against Rhodesian chrome.

Byrd Amendment supporters flatly contend the U.N. sanctions are both illegal and unethical. They charge that "in terms of the U.N. Charter, under Articles 39 and 41, an embargo can only be imposed against a country if it is judged to be a threat to world peace."

When former Secretary Kissinger testified before the Senate Finance Committee for the bill to repeal the Byrd Amendment, he was asked by the Virginia legislator, "In your judgment, does Rhodesia represent a threat to world peace?" Replied Kissinger, "No, I do not." Continued Byrd, "Do you think our actions toward Rhodesia are just or unjust?" With characteristic unctuousness, Kissinger weaseled, "Well, I think it reflects the decision of the international community and the general conviction about justice." Byrd, looking Kissinger over coldly, replied, Frankly, I am not clear from what you have just said, whether you regard it as just or unjust."

ANDY YOUNG—THE QUIET DIPLOMAT

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. RONCALIO. Mr. Speaker, I am pleased to include an item from the Christian Science Monitor for Monday, May 16, which responds in part to the remarks made earlier today by my good friend and colleague from Missouri, Mr. ICHORD, regarding our African problems today.

The Monitor item reveals that our former colleague, Ambassador Andrew Young, is a quiet diplomat, and that the shock-approach diplomacy which raises criticisms from some quarters is actually resulting in quite a good job for our best interests in all of Africa.

Mr. Daniel Sutherland, staff correspondent for the Monitor, comments on the improvement in our relations with Nigeria and in seeing this I am reminded of the fact that in the dark days of the oil embargo, to its everlasting credit it was Nigeria which committed its entire royalty oil for the relief of our problems in America, an act that I am not at all sure was followed by so-called friendly types among the OPEC countries.

In any event, I think the item from the Christian Science Monitor merits reading and it follows:

ANDREW YOUNG, THE QUIET DIPLOMAT

(By Daniel Southerland)

WASHINGTON.—Andrew Young, the quiet diplomat?

Is there another side to America's outspoken and controversial Ambassador to the United Nations?

Indeed there is, if you can believe some of the African specialists in, of all places, the State Department, where grumbling about the "Andrew Young problem" has been widespread.

What some of the State Department officials who live with the Africa problem day in and day out are saying is that Mr. Young has been to a great extent responsible for improvements in America's relations with a number of black African nations.

"He's done quite a good job, but a lot of it doesn't get public," said one State Department specialist, pointing to U.S. relations with Tanzania, Zambia, and even Mozambique.

"If Zaire hadn't happened, we would have had significant movement with Angola as well," the official said.

IMPROVEMENTS ELSEWHERE

But what this official and others most often single out is Mr. Young's quiet efforts to improve U.S. relations with Nigeria, black Africa's richest and most heavily populated country.

Mr. Young has just visited Nigeria for the second time since he became Ambassador to the United Nations. Last year, Secretary of State Henry A. Kissinger had planned a trip to the West African country, but the Nigerian Government asked him not to come. After this rebuff to Dr. Kissinger, U.S.-Nigerian relations appeared to reach a low point. But relations have improved considerably in recent months, thanks in no small measure, officials say, to the efforts of Ambassador Young.

Nigeria, which exported $5 billion worth of oil to the United States last year, is currently mounting a drive to attract American investors, and negotiations are under way to establish a joint U.S.-Nigerian economic commission.

Mr. Young has his critics in the State Department, of course. Some officials find his "open mouth" diplomacy extremely unsettling. But there are also those within the department who allege that the bureaucrats are far too comfortable with fixed ideas and could profit from the shock of fresh thinking. Ambassador Young sees himself as a force for change, preparing public opinion—and the bureaucracy—to accept new directions in foreign policy.

A RETHINKING

"Andy Young makes people over here think—justify past policies and rethink what they're doing," said one State Department official in defense of Mr. Young's self-professed role as foreign policy "point man" for the Carter administration.

While Mr. Young's public remarks on South Africa have raised questions about his suitability as a diplomat, they too appear to have helped improve America's image among the black African nations.

When President Carter first announced a month ago that he had designated Vice-President Walter F. Mondale to focus on U.S. policy in Africa, the move was widely interpreted as an attempt to rein in the outspoken Mr. Young. But State Department officials deny that this is the case. Some of them say that if anyone's role has been diminished, it has not been that of Mr. Young but that of the assistant Secretary of State for African Affairs, William E. Schaufele Jr., a carry-over from the Kissinger days, who, officials say, is soon to be replaced as part of a changing U.S. policy on Africa.

ON THE OCCASION OF PEACE OFFICERS MEMORIAL DAY—1977

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BIAGGI. Mr. Speaker, yesterday was the official observance of Peace Officers Memorial Day. As a 23-year veterans of the New York City Police Department, it is a high personal honor for me to pay tribute to my colleagues in law enforcement, especially the thousands who have given up their lives in service to their fellow man.

The inherent dangers in law enforcement work are graphically demonstrated in the increasing numbers of law enforcement personnel killed each year in this Nation. Already in this year, 28 law enforcement officers have been killed in the line of duty. For the past several years, we have averaged over 100 law enforcement personnel killed. We are somewhat heartened by the fact that Congress has finally passed and the President has signed the Public Safety Officers Death Benefits Act. This law of which I was a cosponsor and ardent supporter of provides a $50,000 lump sum payment for the widows and survivors of law enforcement personnel killed in the line of duty.

While we are grateful that we have provided the means for compensating the families of these slain officers, we are still seeking the answers to prevent their deaths in the first place. There is still strong elements of lawlessness in this Nation, and law enforcement officers as visible signs of authority represent an especially vulnerable target for this element of our society. It is time that the States and the Congress passed laws imposing the death penalty on any person who kills a law enforcement officer in the line of duty. We must provide meaningful deterrents to this type of action which goes to the very heart of this Nation's ability to fight crime.

It is appropriate that on this occasion we pay tribute to our law enforcement personnel who daily are on the front lines in the war against crime. We must also pay tribute to those who have given up their lives so that we can remain free. The job of a law enforcement officer is

dangerous and oftentimes unrecognized for its importance. Peace Officers Memorial Day is an opportunity for this Nation to recognize the essential nature of law enforcement work. Let us pledge ourselves to continued support for our law enforcement personnel and especially commit ourselves to providing better means to guarantee their protection.

INVITATION TO FRAUD

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 17, 1977

Mr. HARRY F. BYRD, JR. Mr. President, Chicago, Ill., is a fine city—and the second largest in the United States.

But bearing in mind the voting frauds and voting irregularities which have taken place there over the years, I do not want the State of Virginia to be turned into another Chicago or Cook County.

That is what I fear would happen if the so-called instant registration legislation is approved by the Congress.

The plan would permit anyone who shows up at the polls on Election Day to vote, even though the individual had not previously registered.

Such a fantastic proposal was analyzed in the following way by Steven L. Klein, director of the Americans for Democratic Action in Illinois: "Every tombstone, firehouse and lamppost in the city of Chicago would be enfranchised if pre-election registration were eliminated."

The ably edited Richmond Times Dispatch had an editorial on this subject in its edition of Saturday, May 14. It was captioned "Invitation to Fraud."

I ask unanimous consent that this excellent editorial be published in the Extension of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INVITATION TO FRAUD

The Carter administration wants to encourage voting by citizens who don't now vote, among whom, an administration spokesman says, are a disproportionate number of the less educated people of the nation.

Assuming that the quality of government will be enhanced by getting as many warm bodies as possible to the polls, the administration is proposing a method that has serious shortcomings.

The idea is that anyone who shows up at the polls on election day should be permitted to vote, without any advance registration, provided only that he can present identification or have someone else identify him.

Though it is generally accepted that increasing the number of voters by this method would increase the Democratic party vote, even some liberal Democrats see the fallacy in the plan.

"Every tombstone, firehouse and lamppost in the city of Chicago" would be enfranchised if pre-election registration were eliminated, declares Steven L. Klein, director of the Americans for Democratic Action in Illinois.

Universal registration would be "a flippant approach to a very important problem" because it would encourage "impulse voting" by people who would go to the polls only because other people were going, says a member of the Democratic National Committee, James M. Wall.

Some officials of President Carter's own Justice Department see the President's plan opening the way to widespread political hanky-panky.

"We recognize that election-day registration may increase the opportunity for election fraud," said Thomas H. Henderson Jr., chief of the public integrity section of the department's Criminal Division, in telegrams sent to all U.S. attorneys.

The concept embodied in the bill backed by the administration represents "a dangerous relaxation of what precious few safeguards exist against abuse of the franchise," wrote Craig Dansanto, a career lawyer who heads the election unit of the Criminal Division, in a memo prepared for internal department use.

The people of this country have sense enough to recognize a threat when they see one. A Gallup Poll reported a few days ago that the President's plan is opposed by a percentage of 55-to-40 by persons expressing an opinion when questioned on the subject.

There is no evidence whatever that the quality of government will be improved by getting to the polls people who haven't enough interest in the candidates or issues to spend the little time and energy necessary to meet the pre-election registration requirements now prevailing in most states, including Virginia.

Election day registration simply by identifying oneself or being identified by someone else would be a boon to persons who would want to vote more than once by giving fictitious names and addresses.

The basic idea is unsound to begin with—that is, that the bigger the vote in any election, the better democracy is served. That idea is pure nonsense. There is virtue in a large *informed* vote. There is no virtue in enticing to the polls people who have no knowledge of the issues or candidates and who simply mark their ballots by whim, thereby possibly thwarting the will of those citizens who are casting informed votes.

But none of this bothers those who see political hay in the proposal. The House Administration Committee has approved the universal registration bill by a vote of 17-to-8. Seventeen Democrats voted for it. Eight Republicans voted against. The Senate Rules Committee approved a similar bill by a 5-to-4 vote Thursday, with five Democrats in the majority and three Republicans and one Democrat in the minority.

If members of the House and Senate cast party-line votes on this issue, obviously it will pass easily. In that event, the Democratic politicians may be the winners, but the people of the nation as a whole will be the losers.

POSTAL SERVICE IS LOSING OUT ON R. & D.

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. HORTON. Mr. Speaker, I would like to insert into the RECORD an aritcle which appeared in the Wall Street Journal entitled, "Postal Service Is Losing Out On Research And Development." Mr. Mossberg provides a very thorough discussion of the many issues involved in the development and potential application of electronic mail transmission technology. The article is worthwhile reading for those interested in the policy decisions that will be made by the Congress and U.S. Postal Service, and the private sector regarding the emerging development and implementation of electronic mail transmission techniques. The article follows:

POSTAL SERVICE IS LOSING OUT ON R. & D.

(By Walter S. Mossberg)

WASHINGTON.—The U.S. Postal Service may be assuring its own financial collapse by refusing to expand aggressively into the emerging market for "electronic mail" transmission.

This is the view of a number of experts in government, science, business and labor. They say that by the mid-1980s, billions of messages and financial transactions now handled by mail will be moved electronically by computers and facsimile equipment.

Some predict that by 1985, the equivalent of one-third of the Postal Service's current volume could be lost to electronic transfer.

The mail most adaptable to the changeover is now moving within or between the nation's largest cities, and it thus represents the most profitable part of the Postal Service's business. Losing it would cost the agency heavily in revenues, and would probably doom it to a permanent fate of rising rates and growing tax subsidies.

"Time is running out" for the Postal Service, a National Academy of Sciences panel warned last year. "While it delays its entry into electronic message services, developments by private firms are sure to proceed, possibly foreclosing any opportunities for the (service) to move into the field in any meaningful way."

International Business Machines Corp., Xerox Corp. and other firms are developing electronic systems that will enable business to largely avoid the Postal Service for financial transactions and many other kinds of messages. The speed and quality of facsimile machines are increasing and the cost and size of computers are dropping.

Meanwhile, the supposedly businesslike Postal Service, which is legally required to break even financially by 1984, is spending only $10 million on such research, equal to about six hours' worth of postal revenues. As things stand, postal management couldn't start a partial electronic system for about seven years, and by then critics say it will be too late to compete.

THE COMMISSION'S CHARGES

Last month, a special study commission of business and labor leaders charged that the agency's research has "low priority, little money, no organizational stature and modest top management commitment." A congressional aide calls the research "an attempt to look like you're doing something when you're really doing nothing."

But the go-slow policy is deliberate, according to Postmaster General Benjamin Franklin Bailar. A greater effort isn't needed, he says, because "I don't see any reason why the government ought to be in a business which private industry is willing and able to take care of."

Mr. Bailar, a former American Can Co. executive, concedes that "electronic communications developments means the traditional Postal Service is going to have less volume and be less important." But he adds that "there comes a time when you have to realize that the world's changing and acknowledge it. I don't feel that the preservation of the sheer size of the Postal Service is a concept that ought to be pursued for its own sake."

That attitude infuriates many of the agency's critics. Postal union leader James La Penta professes to see "a conspiracy to turn the mails back to private enterprise." House postal subcommittee chairman James Hanley says "it is very distressing that present

postal management does not see the need to put greater emphasis on the research and development of new electronic message systems."

There are two types of electronic message systems. One is called electronic funds transfer, in which banks and their major customers link computers to switch money into and out of accounts by electronically adding and deducting funds. About 15% of the federal treasury payments, including many Social Security "checks," are already transferred this way.

Because about 70% of all first class mail consists of financial transactions, the potential loss to the Postal Service from electronic fund transfers is enormous. Consumer resistance to "checkess" banking may slow down the growth, but a study by Arthur D. Little, Inc., estimates that about 10% of first-class mail alone will be lost to electronic banking by 1985.

The other major type of electronic mail is the transmission of messages, rather than just numbers, by electronic means. The first stage of this system's development likely will involve putting "hard copy"—paper—into a computer or facsimile machine, flashing it to another such machine electronically, and reconverting it to "hard copy" for delivery by hand. An example of this is the Postal Service mailgram, which is received in post offices via Western Union Co. and then delivered by a carrier.

The second stage of development will involve direct transmission of messages to and from terminals in homes and businesses. A person or company would feed a message into one computer or facsimile machine and it would be speedily received on the recipient's computer TV screen terminal, where he could have it printed out on paper, if he chose.

This may sound futuristic, but several hundred homes in Japan already have it, experimentally receiving letters, bills, theater tickets and even newspapers over modified TV sets. And some deaf people in the U.S. already use a computer-controlled teletype message network that stores messages and issues a newsletter.

The Arthur D. Little study released last month concludes that "our current rate of technological advance makes it almost certain" that "it will be economically feasible to install electronic terminals in essentially all residences and places of business" in the U.S. "as early as the late 1980s."

But senior Assistant Postmaster General J. T. Ellington Jr., says "we're not even attempting to be on the leading edge of electronics, and we have no interest in getting into the banking business." He explains that the Postal Service's research "is focusing almost entirely on the early stage of electronic message systems, where carrier delivery would still be involved." And he adds that the transitory nature of that stage makes the service unsure it should get involved.

According to a schedule published this spring, the service doesn't plan to start testing any electronic message equipment until 1979, and won't even begin installing any system it might offer until 1984. But by 1982, according to a George Washington University study, privately run electronic systems "will be well ahead of any possible (Postal Service) system."

XEROX'S OFFER

Ironically, the Postal Service could have had a system of the type it's studying ready to start this year, if it had accepted an offer made to it last year by Xerox. The company proposed to install high-quality facsimile machines, linked by satellite, in 31 post offices in big cities, according to postal officials. They say Xerox proposed that the agency then offer a same-day guaranteed mail service at $2.50 for the first page, and $1.50 for each additional page.

Postal officials say Xerox claimed that if the system expanded in seven years to 232 post offices, the agency would be making $50 million a year on it, after deducting leasing and marketing fees paid to Xerox.

But the Postal Service rejected the plan, saying it would be unethical to accept the Xerox plan without asking other firms for bids. Requests for other bids aren't planned, however. One reason, postal officials say, is that a similar system failed in Britain.

That decision irritated the congressional study commission that reported on the agency last month. It urged the service to join with private firms to offer just such a "same-day, premium mail facsimile service." It also recommended that Congress modify the agency's legal monopoly to allow private firms to offer extra-speedy mail service if the Postal Service won't.

Postmaster General Bailar declars that "the electronic network is a fundamentally different business where we have nothing special to offer. If we jumped in, we'd be acting in a predatory manner and I don't think the government ought to do that."

He cites practical problems as well—a need for capital to build electronic equipment, and a lack of technical expertise. Postal officials also say electronic mail wouldn't generate enough revenues to help subsidize the dwindling, but costly residue of messages and parcels that will still be delivered by postal carriers.

Mr. Bailar explains that he favors the current postal monopoly on traditional letters only because the agency's 30,000 post offices make it the most efficient carrier. In electronics, he says, no such federal monopoly can be justified, and without a monopoly the government is too far behind to compete.

Mr. Bailar isn't entirely alone in this view. Henry Geller, former general counsel of the Federal Communications Commission, declares that the service should stay out of direct electronic transmission "on legal, policy and pragmatic grounds."

PRIVATE SECTOR'S FUNCTION

And chairman Lionel Van Deerlin (D., Calif.) of a House communications subcommittee urges Congress to formally declare that "telecommunications is properly a private sector function" and that entry of the Postal Service into electronic mail "could cause grave harm to our domestic telecommunications industry."

Charles Jackson, a computer expert who advises the Van Deerlin subcommittee, describes the agency as a hopelessly outmoded "system of people walking around with bags of processed wood pulp that have black marks on them."

Even many of those criticizing the service's research effort aren't certain it should eventually control home-to-home or office-to-office electronic mail. And postal officials doubt that the current legal monopoly on hand-carried letters would extend to the transmission of electronic messages.

But others believe some government control will be needed to ensure the legality and privacy of messages and to regulate electronic carriers.

The Arthur D. Little study concluded that as the operator of any national electronic mail network, the agency might be able "to assure privacy, equity, universality, reasonable charges and service." And a Carter administration official says "some agency has to be in charge of security, and insure privacy, and I'd rather see the Postal Service do it than something like the Federal Reserve Board."

But despite disagreements about whether the agency should handle electronic mail or not, there's widespread agreement with the National Academy of Sciences' conclusion that "by maintaining the status quo it is unlikely that the (service) can be run as a modern, self-sustaining enterprise, without continually raising rates or sacrificing service."

LOCOMOTION, THE ULTIMATE ENERGY CRISIS

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SCHEUER. Mr. Speaker, while we may all agree in general that conservation of our dwindling nonrenewable energy resources is essential, we neglect at our peril the particular issue of vehicular locomotion—how are we to propel ourselves about if our means of locomotion is petroleum-based power and we are finally without petroleum. Lewis L. Zickel, a distinguished professional engineer, has written a provocative and thoughtful paper on this issue which I urge all Members to read:

LOCOMOTION, THE ULTIMATE ENERGY CRISIS

(By Lewis L. Zickel)

The question of the availability of fossil fuels over the short and intermediate ranges can be argued. However, the most skeptical citizen must admit that somewhere in the foreseeable future the fossil fuels extant on this planet will be consumed. The only debatable question is, "When?". President Carter's announced energy program addresses the matter of dwindling resources of oil and natural gas in terms of coal, nuclear, solar and other potential sources of energy and an effort toward conservation. None of these, not even conservation, relate to the problem of power for locomotion in the long range. Currently, there are alternative sources of energy for heating, cooling and secondary power generation. There are no alternatives for powering our land and air vehicles of the future. Here lies the real technological shortfall in the energy crisis. This is the root of our vulnerability.

Every aspect of our economy and national defense is tied to oil powered locomotion except for a few nuclear ships and submarines. All rail, air and automotive transportation. . . . our entire national capability for movement. . . . are inexorably tied to either reciprocating or reaction engines. The continued functioning of these three vast transportation assets and their satellites is predicated on the perpetual availability of oil. Such perpetuity is not possible. Without an alternate means of powering vehicular movement the failure of these industries (and the function which they serve) is assured.

In structuring our forces for national defense, the availability of petroleum is a parameter of major proportion in the assessment of relative combat power. We now must be aware that there is a new dimension to the defense problem. New generations of combat aircraft, main battle tanks and other combat and combat service support vehicles are developed and placed in the active hardware inventory for a life cycle of approximately twenty-five years. All are now powered by petroleum products. By what means will we power the next generation of vehicles and weapons? In the long range we can neither accept the risk of loss of mobility nor can we assume that our potential adversaries will run out of petroleum reserves before we do. We must assume the reverse. Facts probably verify the latter assumption. Basic locomotion may become our Achilles heel.

It is not a moment too soon to address ourselves to the problem of developing new concepts of locomotion to eventually replace the current systems of vehicular power which will ultimately lose their viability. Regenerable fuels need to be sought or re-

fined around which new engines must be designed.

This could become the major scientific effort in the history of man to date because of the high level of sophistication required of the end product. The problem is to convert a highly mechanized society from one concept of mechanization to another without a drastic drop in capacity and productivity. It took some 80 years of progressive development catalyzed by the technological explosions of two world wars and the space race to bring us to the current level of locomotive sophistication. The first generation of new propulsion systems developed from this proposed scientific effort must function with at least the degree of performance and reliability of systems in use now if we are to minimize the negative impact upon our economic system from such conversion. Its timely success will perpetuate our industrialized culture; its failure will herald in social regressions that may very well rend the fabric of our society. This statement provides grist for the philosopher's mill. Its logic lies with the need to deliver grits to his table. The delivery of food; its distribution from the farm to the kitchen is the basic mobility requirement of our society.

What sector of our society should lead this massive research effort? Despite my strong belief in the market place as the prime instrument of meeting the demands of society for new products, I do not believe that this task can be performed on a timely basis through the leadership and initiative of the private sector without a strong presence and involvement of the Federal Government. The large capital investment existing in the petroleum oriented industries is too immense for these industries to wholeheartedly perform the independent research which will render their investments obsolete just as long as a source of oil exists or is thought to exist anywhere in the world. I would expect, therefore, that the intensity of the research and development effort by the energy oriented industries would be kept in proportion to their perception of oil availability. Any program so throttled would be inimical to our national interest. The technological resources of the private sector must be utilized, but the program must be centrally controlled and administered by the Federal Government.

We have proven the wisdom of this type of technological mobilization through the successes of the Manhattan Project and the Space Program. Both accomplished their objectives. Both generated economic benefits to the full spectrum of our economic system from education to industry.

The development of new concepts of locomotion must become a major component of our national strategy and effort now. The forecasts of the time required and specific outcomes of this massive effort are beyond prediction. In the face of these uncertainties, logic dictates that the maximum amount of time and money be made available to accomplish the basic objective; freedom from reliance on petroleum powered systems of vehicular movement. To not solve this problem presages a national disaster of crippling proportion; to not *attempt* to solve it, a national dereliction.

UNITED NATIONS FUND FOR DRUG ABUSE CONTROL

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. GILMAN. Mr. Speaker, during the February 1977 congressional recess, at the request of the Select Committee on Narcotics and the State Department, Congressman JAMES SCHEUER and I attended the 27th session of the United Nations Commission on Narcotic Drugs in Geneva, Switzerland. Having been accorded the privilege of addressing the Commission meeting, I took that opportunity to call to their attention the need for a broader, more equitable assumption of the fiscal responsibility of the world's narcotic problems. The drug abuse problem is not unique to any one country. . . . It is indeed a worldwide threat to all nations.

In 1971, the Commission on Narcotic Drugs helped to create the United Nations Fund for Drug Abuse Control. UNFDAC is a trust fund of voluntary contributions to finance projects, primarily in developing countries, to strengthen national drug control capabilities, to reduce the demand for illicit drugs, and to encourage regional cooperation to counter the illicit traffic. As of the end of 1976, the fund has received over $23.5 million from some 60 governments. However, of this total more than 80 percent, some $18 million, has come from the United States.

During the 27th session, UNFDAC's Executive Director, Ambassador J. G. de Beus, stated that "there are many countries whose contributions—or sometimes, lack of contributions—is in no way proportionate to the direct benefit they reap." Some of the nations more seriously affected by the growth and abuse of illicit narcotics have not contributed any amounts or at best token sums.

In its short lifetime, UNFDAC has made impressive gains in its efforts to control the flow of narcotic drugs. Its greatest roadblock however, has been the lack of adequate funding for its programs. Since no single nation can counter this threat alone, a concerted international action is essential. Without international support, the international narcotics control community will lose its main instrument for effective concerted world action against illicit drugs.

It is my firm belief that this should not happen. The United Nations Fund for Drug Abuse Control should expand its operations, not phase them out. But, to do this, we need increased support throughout the world in this fight against trafficking and abuse of illicit drugs. As I noted in my address before the Committee, "it is relatively easy to utter the words of a declaration of war, it is far more difficult and much more important to engage in the battle—to give meaning to our words by our deeds."

I have recently received a letter from Executive Director de Beus commenting on the effects of our visit and our requests and reporting on UNFDAC's fund raising efforts and the progress of their various programs. In addition, he states that "the unreserved support of the United States Congress is essential if the United Nations Fund is to continue to receive from the United States the contributions which are essential for the continuation of its operations." He continues, that "one of our problems in fundraising is that we, as a Fund, are dealing and must deal primarily with governments, whereas the parliamentarians of their countries are often not sufficiently aware of our activities and the need for financial support."

In an effort to help make more of my colleagues aware of the valuable contribution that UNFDAC makes to the international narcotics control effort, I am inserting Ambassador de Beus's correspondence for your review. UNFDAC deserves our continued support, both financially and morally.

The text of the Ambassador's letter follows:

UNITED NATIONS OFFICE AT GENEVA,
Palais Des Nations, May 5, 1977.

HON. BENJAMIN A. GILMAN,
Select Committee on Narcotics Abuse and Control, U.S. House of Representatives.

DEAR MR. GILMAN: In response to your letter of April 28, 1977 allow me first of all to express my appreciation for the help you gave us by your and Congressman Scheuer's attendance at the meeting of the Commission on Narcotic Drugs and your intervention in the debate on Fund operations. Your statements to the Commission, which were reported in the summary records of the meeting, on the one hand clearly demonstrated the U.S. Congress' support for our objectives, and on the other hand your expectation that other governments will make greater contributions to our programmes since they are of universal benefit. I have used your statements as well as those made in Congressman Wolff's press conference in Geneva on 9 November 1976 in urging other governments to increase their contributions wherever I believed they would be responsive to your encouragement.

I recognize that the unreserved support of the United States Congress is essential if the United Nations Fund is to continue to receive from the United States the contributions which are essential for the continuation of its operations. If knowledgeable and committed Congressmen from the Select Committee like Congressman Wolff, Congressman Scheuer and yourself could persuade parliamentarians in other countries, especially in western Europe, to take a similar position, this would surely help to obtain the increased contributions which you and we are entitled to expect from those governments. As you may know, we have succeeded in increasing the number of contributing governments from 40, when I took up my position, to 69 now. However, since most of the new contributors are developing countries, the total amount of contributions received has not gone up in proportion with the number of donors.

Visits such as yours to parliamentarians of other countries are particularly useful because one of our problems in fund-raising is that we, as a Fund, are dealing and must deal primarily with *governments*, whereas the *parliamentarians* of their countries are often not sufficiently aware of our activities and the need for financial support. I hope therefore that it will be possible for members of your Select Committee to initiate or maintain such contact with members of Parliaments from other countries.

A second problem which we are meeting in an increasing degree in our efforts to raise additional funds in the following:

During the early stages of our activities the drug problem was mostly considered a problem to be dealt with by the national Ministries of Health or of Justice, because of the initial assumption that drug abuse was primarily a problem in the field of health or of law enforcement. In the course of our activities we have, however, more and more come to the conclusion that an important aspect of our efforts should be to try and cut off the supply of drugs, in particular of

opium and its derivatives, at their source, i.e. in the countries of origin such as Turkey, Afghanistan, Pakistan, Burma and Thailand.

As you are aware, the U.N. Fund for Drug Abuse Control has, in cocperation with the Turkish Government, established and supported a system of poppy growing in Turkey, which has enabled the farmers to continue the production of opium poppy without, however, any opium being tapped from the opium poppy, with the result that Turkey has now been completely closed as a source of opium for the illicit market for the last two years. This programme has cost the U.N. Fund approximately $4 million, of which about ¾ or $3 million was derived from contributions of the U.S. I should like to point out that consequently this result has been achieved at a cost to the U.S. taxpayer of less than 1/10 of the $35 million which the U.S. were prepared in 1972 to make available to Turkey to end the growing of poppy.

The Fund is now concentrating its efforts on the remaining producing countries and has, on the basis of experience, increasingly come to the conclusion that one cannot simply forbid the growing of opium poppy without offering the very poor poppy farmer an alternative, and if possible better, way of gaining his livelihood. This means that in practice our crop replacement programmes in South Asia—and the same may apply in future to coca replacement in Latin America—are more and more taking on a character of development aid. Our experience in fund-raising in the industrialized countries shows that the national Ministries of Health and/or Justice, who used to bear the contributions to the U.N. Fund, have only a very small financial margin for such contributions to international projects. Hence we have recently concentrated on getting the principle accepted that our "crop replacement and community development programmes" have such a strong development aspect that it is justified to use development aid funds for the support of these programmes. We were therefore very happy that the U.N. Commission on Narcotic Drugs at its 27th session in February 1977 adopted a resolution to this effect, which, we hope, will be confirmed by the Economic and Social Council.

It is in this context that one must also consider my recent mission to the Scandinavian countries. Rather than asking for an increase or doubling of their present contributions, we concentrated on the principle that all opium, heroin and other derivatives now coming into Europe, find their origin in certain countries in South Asia and that therefore the most effective way of combatting this flow of drugs is to support the crop replacement and community development programmes aimed at replacing the production of these drugs by that of food and other useful products. I was particularly happy that this thesis found a strong and favorable response in the Nordic countries. I may, in this connection refer to the report on my mission to the Nordic countries, which I sent you earlier. For the convenience of the members of your Commission I enclose as Appendix to this letter a number of statements made by members of the Nordic Governments pledging their support from development aid funds for the crop replacement programmes of the U.N. in the Golden Triangle and other opium producing areas. I likewise enclose a statement made by the Norwegian Minister of Foreign Affairs in the Storting on 18 April 1977, which eloquently states the determination of Norway "to use Norwegian development aid funds to support economic and social efforts which could prepare the ground for substituting production of opium with other agricultural products." The Minister added: "In the light of the communiqué from the Foreign Ministers' meeting in Reykjavik, there is reason to believe that other Nordic countries, too, will contribute to the Fund. Such a joint Nordic initiative would undoubtedly mean a considerable strengthening of the activities of the Drug Abuse Fund and could, moreover, lead to other countries increasing their contributions and to new countries joining in the effort."

In the meantime discussions with the Scandinavian Governments have been going on, the exact purport of which I am not at liberty to disclose as long as the Governments concerned have not come to a final decision and their Parliaments have not given their authorisation. I can, however, state that if the present plans materialize, they would result in very substantial support to the Fund and in particular to its crop replacement programmes. I have good hopes that this combined effort will result in a situation such as the U.S. Senate and House of Representatives, as well as the U.N. Fund, have been striving for, viz. that the U.S. contribution to the Fund should be more evenly balanced by contributions from other countries.

On the basis of the above mentioned resolution of the U.N. Commission on Narcotic Drugs and of the generous support by the Nordic countries we intend now to renew our efforts in other industrialized countries to obtain greater support on their part, in particular using development aid funds.

A next problem which the Fund is facing is to apply and extend the successful results of our pilot projects on a much larger scale. This problem is arising now in Thailand, where our 5-year pilot project is in its last year. It has been very successful in that it has proven to the farmers that they can replace the production of opium poppy with other products with equal or better profit. Our pilot project in the North of Thailand, however, covers only 30 opium producing villages and would gradually have to be extended to all the 800 opium producing villages. It goes without saying that this will be a major undertaking, and also that the Thai Government is accepting this gigantic task not only in the interest of its own hill tribe population, but also of many countries consuming illicit opium, and is therefore entitled to support from the worldwide community. This will require funds on a much larger scale than the U.N. Fund for Drug Abuse Control could ever provide. I do *not* intend to ask for greater U.S. contributions for this purpose, but will try to make the Fund fulfill its role as a *catalyst* in trying to raise and co-ordinate contributions of other U.N. organisations which are spending considerable amounts for development aid in Thailand, such as UNDP, FAO, the World Bank, the World Food Programme, etc. To sound out the possibilities in this field the Fund has just now, in co-operation with the Narcotics Division of the U.N., sent a mission to Thailand.

The Thai Government on its part has undertaken the obligation, in a provisional agreement which I made with them in December last, to draw up a master plan in order to take over the UN/Thai crop replacement programme, to apply the results of this programme in phases to the other poppy growing areas, and to put into effect in these areas the ban on poppy growing.

A similar problem will have to be faced at a later stage in other opium producing countries such as Burma, Pakistan and Afghanistan, when the pilot projects in those countries mature.

It is hoped that as these projects and their financing materialize, this will ultimately result in a situation in which the U.S. contribution will become a smaller part of a truly world wide financing. This would put an end to the present situation where the U.S. are providing more than ¾ of our income, a situation which in the long run can of course not be maintained. At present, however, I must emphasize that the situation is certainly such that the Fund and the numerous activities financed by it are preponderantly dependent on the support of the U.S. and that if that support should be withdrawn, this would mean the collapse of all the ongoing programmes with their hopeful future possibilities.

I hope that this survey will give you and the Select Committee an insight in our future programmes and in our efforts to reduce the share of the U.S. in financing them. Please convey to your colleagues our deepest thanks for the support the U.S. Congress is giving us.

Yours sincerely,

Dr. J. G. DE BEUS,
Executive Director, United Nations Fund for Drug Abuse Control.

MINISTERIAL STATEMENTS

(In connection with the UNFDAC Mission to the Nordic countries)

In a statement after the meeting with the Fund representatives, Mr. Ullsten, Swedish Minister for Development Aid, confirmed that the possibility of using Swedish development aid funds to support the activities of the United Nations Fund in various developing countries had been discussed during the visit. Mr. Ullsten found that the Fund was making a valuable contribution in reducing the flow of narcotics. Some of its activities, he said, aimed at supporting social and economic development in some very poor countries where the opium poppy is now being grown.

Mr. Ullsten further stated, "We believe it is important to offer to poor farmers who cultivate opium poppy socially and economically reasonable alternatives to the cultivation of poppies, which they have been cultivating for generations. These farmers should be offered a chance to switch from the cultivation which has such destructive consequences to a productive cultivation. A large part of the Fund's activities aim at precisely this. The Fund also makes important contributions for instance, through the World Health Organization (WHO) in the fields of health and preventive education. The Government will study in positive terms, and within the framework of the aims of Swedish development assistance, the possibilities of contributing financially to the activities of the Fund. We also plan to contact other industrialized countries to find out what plans they have to expand their support for the Fund."

At a local meeting of the Norwegian Social Democratic Party, Minister Frydenlund made the following statement: "Norway is prepared to use development aid funds to help opium poppy growers to switch to other crops, and I will raise this question at the meeting of Nordic Ministers of Foreign Affairs in Reykyavik. The goal is to establish co-operation with the authorities in the countries concerned in projects which would lead to cultivation of alternative crops. The authorities in the so-called Golden Triangle now seem to be interested in such a change of production".

At the meeting of the foreign ministers of Denmark, Finland, Iceland, Norway and Sweden, held in Reykjavik from 23 to 24 March 1977, the ministers considered the work being accomplished by the United Nations Fund and particularly its crop substitution programmes of particular interest and this was reflected in the final communique of the meeting as follows: "The Ministers

discussed the serious problems which the illegal traffic in narcotics has caused also in the Nordic countries. These call for new international measures. They expressed the intention of the Nordic countries to work actively for initiatives in this field through the organs of the United Nations".

The Nordic Council convening in Helsinki on 5 April 1977 discussed drug abuse. Mrs. Irma Toivanen, Finnish Minister for Social Affairs and Health, emphasized that one of the most effective ways of combatting drug abuse was to go to its source and prevent production. She, therefore, proposed a joint Nordic project within the framework of the United Nations Fund for Drug Abuse Control, for example, in Afghanistan where a programme was being developed for limiting poppy-growing by creating possibilities for cultivation of other products.

REPEAL OF THE EARNINGS LIMIT

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. CRANE. Mr. Speaker, in all the discussion we are having these days about expanding or curbing the powers of the labor unions, one hears little about the earnings limit on social security. Presumably, this is due to the fact that people see little relationship between social security legislation affecting those who have retired and labor laws dealing with those who are still working. In reality, however, the two are not only related but, were it not for the vested interests of organized labor, it is unlikely that any limitation on what senior citizens could earn would have much support.

As the law now stands, any senior citizen between 65 and 72 who earns in excess of $3,000, in addition to paying income and payroll taxes on the entire amount, forfeits $1 in social security benefits for every $2 he or she earns over and above the $3,000 limit. The fact that this penalty is exacted against what amounts to a repayment of previous contributions seems to be of little consequence. Nor does it seem to matter that the senior citizen may find the financial going tough on a fixed income and would rather work than live in poverty. As things now stand, encouraging people to retire, even though they may be both able and eager to work, takes precedence over both fair play and individual need.

A look back to the turn of the century indicates what a profound impact the earnings limit has had. In 1890, for instance, 73.9 percent of all elderly males over 65 worked. In 1930, the percentage was still a high 58.3 percent but, by 1970, the percentage had dropped to 25 percent. However, social security benefits have hardly compensated for this loss of income; as of a year ago, the maximum benefit for a man retiring at age 65 was $400 a month and the average benefit was only $208 a month. As anyone who has gone to the store lately knows, $208 a month is hardly adequate for anyone to live on.

Even the folks who administer and supervise social security admit that it does not totally compensate for the income previously derived from working. As the 1965 Advisory Council on Social Security put it:

> The purpose of social security benefits is to furnish a partial replacement of earnings which are lost to a family because of death, disability or retirement in old age.

Subsequent pronouncements by subsequent advisory councils have made the same point; social security benefits are no match for earned income.

The rationale offered in defense of an earnings limit, or retirement test as it is frequently called, is that it will help those who need it the most—those who have retired and are no longer able to work. To do otherwise, so the logic goes, would "water down" the benefits to the extent that they would not be very helpful. However, if everyone has paid into the program over the years, why should some be penalized simply because they are industrious or healthy or both? Not even life insurance policies, which some people inaccurately like to compare to social security, are as discriminatory in their applicability. And, as if that were not enough, the very existence of a retirement test encourages employers to force employees to retire, and go on a fixed income, before they otherwise might. Perhaps the earnings limit would make more sense if this were not the case, but no one can deny the trend toward mandatory retirement at age 65 in recent years.

So, if the aforementioned rationale is not the reason for the earnings limit, what is? As a historian by training, I think a look back at the measure's origins gives us a clue. The retirement test was written into the original Social Security Act of 1935 by a Congress concerned by the effects of the Great Depression. Four years before, a similarly affected Congress had passed the Davis-Bacon Act in order to keep those anxious to work on Federal public works projects—undertaken, in large part, to fight depression-generated unemployment—from driving down wage scales. Three years later, Congress passed the Fair Labor Standards Act, which included provision for a 25-cents per hour minimum wage, in order to keep job hungry people from accepting employment at any wage, thus driving down wage scales. Both bills favored the same group that was responsible for two other depression era measures aside from the two just mentioned. Those measures were the Norris-LaGuardia Act and the Wagner—National Labor Relations—Act and the special interest group was organized labor.

Underscoring the importance of a retirement test to organized labor is the analysis of former HEW Secretary Wilbur Cohen. Writing in a book entitled "Retirement Policies Under Social Security," Cohen explains that without a test:

> The labor movement was particularly concerned, in light of the 1929–1934 experience, with the possibility that the payment of an old age benefit might encourage employers and employees to depress the wage level if any appreciable number of older employees drew old age benefits and continued working at the same time.

Subsequently, labor recognized there was another value to such a test—if older people were encouraged to retire, in fact penalized if they did not retire, there would be less competition with the remaining union members for existing jobs. Thus, it is as much in organized labor's interest to continue to support a retirement test, even though we are far removed from the depths of the Great Depression, as it was to back it in the first place. And, as Mr. Cohen points out, the representatives of organized labor have "* * * supported consistently the inclusion of a retirement test in the law, as have the representatives of business and private insurance companies."

On the surface, at least, the argument that encouraging people to retire reduces the unemployment rate would seem to make sense. However, as W. Kip Viscusi and Richard Zeckhauser point out in a new book entitled "The Crisis in Social Security; Problems and Prospects":

> Removing the elderly from the work force only reduces the scale of the economy, not the rate of unemployment.

Furthermore, they note that the recent entry of massive numbers of women into the work force, which should have increased unemployment if the aforementioned argument were accurate, has not, in fact, had that effect. Instead, the new workers have, as they have in the past, created new products and new markets, provided individual ingenuity, and an expanding economy.

So what we have, in reality, is another piece of special interest legislation. Just as the minimum wage keeps young people out of the work force, thus decreasing job competition for union members, so too does the earnings limit keep older folks out of the work force even though they may have tremendous talent, energy, and experience to contribute. If anything the latter is even more insidious. With the minimum wage, young people at least can look forward to earnings in the future to say nothing of the fact that they are not being denied the fruits of past labor. But for the senior citizens locked into a fixed income by an earnings limit, there is little to look forward to other than inflation and the fact that they are being denied what is rightfully theirs. Given the number of senior citizens who by virtue of their fixed incomes and the ravages of inflation are in the poor or near poor category, such policy makes no sense at all. If anything, we should make it possible for them, without compromising their dignity, to augment their incomes. And the easiest way to do that is to let them work without penalty—if they so choose.

Perhaps the most potent argument that can be raised against eliminating the earnings limit is its cost—an estimated $6 to $7 billion in the first year alone. But, against that, we must take into account the fact that those senior citizens who do decide to keep on working will be paying payroll taxes on their earned income. Thus, the total amount

paid into the social security system will increase—keeping in mind the fact that unemployment rates will not necessarily increase—as benefits paid out increase. Also, the savings of $6 to $7 billion a year is not, in itself, enough to justify the discrimination involved or to obviate the need for financially restructuring the social security system. All it really does is benefit the labor unions at the expense of a lot of senior citizens who have worked hard all their lives, contributed to what they thought would be a decent retirement income, and are now being deprived of the opportunity to work and contribute further.

At a time when study after study is showing that keeping active and working often contributes to better physical and mental well-being in old age, continuation of the earnings limit would not only be anachronistic but unnecessarily cruel. After all, it is not someone else's money senior citizens are being denied; it is their own—plus interest—and they should be able to augment it if they so choose without penalty. To deny them the right to do so in order to benefit another group in society does not reflect well on the operation of social security. If anything, it suggests that we are promoting antisocial insecurity.

MONUMENT DEDICATION

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. McDADE. Mr. Speaker, I would like to bring to the attention of my fellow Members the meritorious public project just completed, that will memorialize those who gave their lives in the defense of the Nation in the 20th century.

Messrs. Gino Merli, Elio Sebastianelli, M.D., Joseph Flannery, and James Kelly, Esquire, organized the "Lackawanna County Monument Fund" to erect a monument that would serve as a constant reminder of the sacrifices of those who have made our country strong.

Messrs. John Dunn, Esquire, William Kays, Pio Ferrario, Prosper Spaletta, Stanley Golden, Leo Cichy, Andy Major, Steve Shebby, Bernice Pace, Ed Kachanski, Mike Pasevento, and E. Ziman volunteered their services to act as fund raising committee. Together they took their laudable goal to the people of Lackawanna County who willingly gave to support this monument.

Through the efforts of all the members of the committee, a monument will be dedicated as a tribute to those local servicemen and women who gave their lives for the security of our Nation.

The monument, which will be located in the heart of the city, will help for each of us to recall some of the finest aspects of our American system; the willingness to give all for the protection of democratic principles and, desire on the part of those who have benefited by the sacrifice of others, to be constantly thankful.

A PERSPECTIVE ON LATIN AMERICA

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SARASIN. Mr. Speaker, John Davis Lodge has served as U.S. Ambassador to Spain and to Argentina, thus I feel that he speaks with considerable knowledge and authority on aspects of our foreign policy. On April 1, an article written by him appeared in the New York Times which I feel bears reprinting in the CONGRESSIONAL RECORD. Particularly as we in the Congress have a growing concern with the behavior of foreign countries and their observance of basic human rights, his comments should be of considerable interest to us:

KNOW THY ENEMY

(By John Davis Lodge)

To revisit Argentina after more than three years' absence is a revealing experience.

Inflation is still substantial but greatly reduced. Business has improved and foreign investments have increased.

The Argentine crime rate, terrorists excepted, is far lower than that in the United States. Terrorism is definitely in retreat. It is kept alive mainly by the huge sums collected from private concerns as ransom for kidnapping victims and also from robbing banks.

This enables the terrorists to recruit the unemployed, who are willing to risk their lives and lose them for the sake of money. Many of them are not ideologists, just mercenaries. Many terrorists have been killed. Others are in prison. At this juncture, they face the near-certainty of eventually being killed.

If we North Americans were as interested in helping our friends and allies to combat our common "self-style" enemies (Winston Churchill's phrase) as we appear to be in seeking détente with those same enemies, these countries would feel greatly relieved. As it is, they look to the giant of the North with apprehension. They need our leadership in their struggle. Instead they get sanctimonious lectures on human rights.

Our record on human rights is flawed and they know it. We appear hypocritical. If we intervene to help our freedom-loving friends in Chile and to defend American national security interests in that country, there is a quixotic hue and cry as though somehow it were evil to confound the enemy and to protect our own vital interests. Yet when our friends are coping successfully with the enemy's challenge, then, somewhat perversely we intervene with lectures on human rights that discourage our friends and help our enemies. We look as though we did not know who our friends and who our enemies are.

Our foreign policy should be more geopolitical and less evangelical. If we could stop preaching, we might even be able to learn something from our friends in Argentina, Uruguay and Chile regarding how they have successfully handled and are handling the most cunning, cynical, vicious, brutal, relentless challenge of our time.

When will we catch on that the ideological conflict is taking place in a jungle world?

On revisiting Argentina, Uruguay and Chile, one cannot help being struck by the contrast between the attitude of these Latin-American countries toward our common enemies and the attitude of some of the old countries of Western Europe.

In Italy, in France, in the Netherlands, in Belgium and in the Scandinavian countries there is definitely an atmosphere of broad-mindedness—indeed, of hospitality, toward the Communists, a desire somehow to accommodate them, to avoid or at least postpone the moment of truth.

This is a natural result of the Nixon-Kissinger policy of negotiation rather than confrontation, a dangerously pleasant phrase that means appeasement of the enemy in the name of peace, which it is said all men want—a tired shibboleth disproved time and again. So far, détente has been a one-way street.

In Argentina, Chile, Uruguay, Paraguay, Bolivia and in Brazil they have sought the confrontation out of which victory has gradually emerged. The security forces are prevailing against the imperialistic drive from Moscow via Havana. In the countries of Western Europe, the will to resist, sapped by years of war, has been further eroded by chicanery and by raw terrorism.

Why should this be? Why should these countries far to the south of us understand better than the so-called sophisticated societies of Western Europe the greatest challenge to freedom since Hitler's Nazi hordes started the *Blitzkrieg* with their Panzer divisions?

The contrast between the healthy zest for the struggle in South America and the decadent defeatism rampant in Western Europe is dramatic.

Having visited Spain and Argentina in rapid succession, I can report that the Spaniards in general feel much as do the inhabitants of the southern sector of South America.

Yet they are so anxious to enter the Common Market, which is dominated by left-leaning democracies, that they feel obliged to flirt with Communism.

I am confident that basically the Spaniards understand the challenge and that the alien effort to dominate Spain will be no more successful in 1977 than it was in 1936 when the Spanish Civil War began.

The countries of the southern sector of South America do not have to worry about the European Common Market as the Spaniards do. They understand the threat. They realize that the East-West conflict runs North and South. They are winning the undeclared war of our time and generation. They are setting the stage for an eventual revival of free representative institutions.

L. J. ANDOLSEK

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. MICHEL. Mr. Speaker, I would like to pay tribute to a great public servant and a dear personal friend who has recently left Government service. I refer to Lud Andolsek—L. J. Andolsek as he is known in Government circles—who has just retired as U.S. Civil Service Commissioner. Government can ill afford to lose men of the personal integrity and professional capability of Lud Andolsek.

I believe that Lud is living proof that talent and generosity and ability and a capacity for friendship know no bounds of political party or philosophy. He was first appointed Commissioner of the U.S. Civil Service in 1963 by President John F. Kennedy. He was reappointed to a second term in 1969 by President Richard M. Nixon and was reappointed a

third time on June 26, 1976, by President Gerald R. Ford. Now I think you will agree with me when I say that this is an admirable and probably unique record of achievement, to be appointed and then reappointed by three Presidents of different parties and different outlooks. You might say the three agreed on few things but one of them was that Lud Andolsek is the kind of civil servant that this country needs.

He was the AMVETS Civil Servant of the Year in 1966, the winner of the VFW Gold Medal of Merit in 1972, and received the Distinguished Alumni Award of St. Cloud University in 1973. Yet, despite the official public acclaim he has so deservedly received, it is not only the public man but the private man I seek to honor today, the man I met a short while after I first came to this city over 25 years ago.

When you first come to this town it is always a bit bewildering. I suppose it is more bewildering now than it was when I first came here. But the essential feeling is the same for all of us. You want to meet people you can count on, people who can count on you. Well, after I had been here a few years, I met Lud who was then administrative assistant to our good friend and former colleague John Blatnik of Minnesota. Through the years our friendship deepened and I always considered myself fortunate to have as a friend such a marvelous human being.

Mr. Speaker, I am not the only one in this House fortunate enough to be able to call Lud Andolsek his friend. I daresay there is not a man who has worked in this town for any length of time who has made more genuine friends and who has more admirers than Lud.

There is a line in the New Testament that I believe best fits what the American people must feel about Lud's departure: "Well done, Thy good and faithful servant." That is what all of us feel in our hearts about this man who has served our Nation selflessly and with great ability for so many years.

BRONX HIGH SCHOOL OF SCIENCE

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BINGHAM. Mr. Speaker, I am proud, indeed, that the Bronx High School of Science, one of the outstanding schools in the country, is in my congressional district.

Following is an article on this school which appeared in today's Wall Street Journal:

ELITE HIGH—BRONX SCHOOL OF SCIENCE OFFERS BRIGHT CITY KIDS TOP-NOTCH EDUCATION

(By Roger Ricklefs)

NEW YORK.—Most high schools would be delighted to have even one student like Victor Menon.

At age 16, the slender Bronx High School of Science senior already corresponds with Harvard Medical School professors on research techniques. He spends Saturday mornings taking an electronics course at Columbia University. His biggest research project was one of 40 winners—out of 14,000 entries—in this year's prestigous Westinghouse Science Talent Search. "At this school I think I've received one of the best educations in the country," he says.

But Victor isn't unique at Bronx Science. The school accounted for seven of this year's 40 Westinghouse winners nationwide. Indeed Bronx Science produced more winners than all the high schools in any entire state except New York. Moreover, few affluent suburban high schools or private schools can match its record of National Merit Scholarship winners or student admissions to leading colleges.

Remarkably too, this celebrated high school is actually part of the troubled New York City school system. It is one of four specialized New York public schools that draw their students from the whole city system by competitive examination. Fewer than one in five Bronx Science applicants is accepted.

SOME IN OTHER CITIES

A few schools like this exist in other cities, notably Boston and Philadelphia. Critics say these institutions breed snobbery by isolating the talented from the rest of humanity. But defenders say the elite establishments provide one of the few remaining chances short of expensive private schools for a bright urban youngster to receive a top-quality education.

Students vie to attend these schools to escape the deterioration, violence and hostility to learning found in many urban high schools. "The really great thing about Bronx Science," says senior Steve Gold, "is that you can have a discussion in the corridor about the cardiovascular system of the fetal pig and not be stared at."

Once inside Bronx Science's cheerful, modern, brick-and-glass building, the 3,300 students are thrown into a competitive, nononsense academic atmosphere. More than a quarter of the senior class takes college-level calculus, and an advanced mathematics course considers such topics as "Diophantine Equations" and "Fermat's Last Theorem." The school publishes its own scholarly journals. The Journal of Biology, for example, runs student research papers on subjects like "Evidence for Allelopathic Agents on Bromus Roots Exudates"; the journal is indexed in Biological Abstracts along with university journals, and college professors commonly request reprints of these high school papers.

STRONG IN HUMANITIES

But the school is strong in the humanities as well as science. (Only 60% of the graduates enter science-related careers.) Students must take four years each of English, social studies and science and three years each of foreign language and mathematics. English classes require papers on subjects like "Free Will vs. Determination in Macbeth." Also, seniors must master an English vocabularly list consisting of words such as "desuetide" (meaning disuse), "obloquy" (verbal abuse), "rodomontade" (arrogantly boastful talk) and "teleogy" (the study of final causes).

For the opportunity to work so hard, students gladly suffer long commutes. Andrew Lo says he rises each day at 5:30 a.m. and rides a bus and three subways to reach Bronx Science. Though the trip takes 2¾ hours each way, he says: "I think it's well worth it. This school is almost like a college."

While teachers say student motivation accounts for much of the school's success, the curriculum itself is unusual. The biology department offers a four-year sequence of courses partly designed to make students think like scientists. To an uncommon extent, even sophomores are required to devise their own valid, controlled experiments to test hypotheses. "The 10th grade lab does experiments that practically every other biology program in the world does as teacher demonstrations," says Milton Kopelman, department chairman.

COLLEGE-LEVEL COURSE

In the senior year, 165 students take a college-level biology course that constitutes the largest advanced placement biology program in the nation. One senior, Daniel Petrylak, will have a research paper read to the International Congress of Protozoology in New York in June. Another senior had a paper published in the Journal of Ophthalmology. The department receives a steady stream of foreign and American educators wanting to observe its famous program. It has recently received a federal grant to prepare materials and disseminate the program to other schools.

In the mathematics department, students start working with computers as early as the 10th grade. One youngster, Jacob Goldfield, became so entranced with them that he volunteered to work for nothing at a nearby hospital's computer center. Eighteen months later, the precocious student is now a paid computer consultant there. Indeed, he has made so many changes in the hospital's computer operations that while at school he wears a hospital beeper on his belt to enable the hospital to contact him in case of questions. "Besides," he says, "my mother likes to be able to get in touch with me."

With students like this, the atmosphere at Bronx Science differs greatly from that in the usual urban high school. The students—about 55% male—mostly dress in neat, clean blue jeans and sneakers. Teachers say classroom disciplinary problems scarcely exist.

The school itself is incongruously located a few blocks from a subway car yard. Though surrounded by uninspired apartment houses in a quiet Bronx neighborhood, the four-story building overlooks a grassy playing field and has the atmosphere of a suburban high school. A huge mosaic portraying history's famous scientists in action dominates the entrance. The lobby is also filled with glass cabinets stuffed with trophies won in science, mathematics and debating. Classrooms are clean and graffiti are rare.

Of course, the school has some problems. New York City's financial squeeze has trimmed the faculty and added three or four students to many classes in the past two years. Classes of 35 or 36 students aren't unusual today. Though the school has its own small planetarium with a silver-colored dome protruding from the roof, it goes unused for lack of repair money.

Moreover, even teachers concede the physics and chemistry department is heavy with deadwood waiting for retirement. While some English teachers write detailed, painstaking corrections on student essays, others skimp. Foreign-language teachers often concentrate on grammar and syntax and give students little conversational practice.

Yet students praise much of the faculty effusively. Teachers are eager to work at Bronx Science, especially in view of the problems elsewhere. "I came here because my brain was turning to cheese," says Mark Rifkin, widely praised chairman of the English department, who previously taught in a vocational high school.

SUPERIOR FACULTY

Because of its fine reputation, the school can choose its teaching staff from the cream of the crop. It can offer jobs to anybody eligible for appointment on the basis of civil-service test scores and similar criteria. Teachers appointed through transfer within the city school system are selected on the basis of seniority, but transfers never ac-

count for more than two new teachers a year.

Many faculty members stay for decades. And although the school was founded 39 years ago, it has had only two principals. The current one is Alexander Taffel, a trim and dapper former physics teacher who has held the post since 1958. Like a number of faculty members, he has written widely used textbooks.

Several teachers have also taught in colleges and say they prefer Bronx Science. "I enjoy teaching people at an age when I am likely to have a greater effect on them," says Richard B. Sodikow, an English and forensics teacher. "One way or another, I am going to have an effect on every kid I teach. It's an incredible egotism, I know, but that's my goal," adds the bearded and jovial teacher, whose popularity is even greater than his girth.

Among his many interests, Mr. Sodikow seems to take special delight in coaching the school's highly successful debating team. "We never win fewer than 150 trophies a year, and this year we're averaging about 30 a month," he says. "We have a case in the main hall for our latest trophies; it gets changed every week or so."

The students share his enthusiasm. Through car washes and cake sales, they raise about $12,000 a year to finance the team. Mr. Sodikow also contributes about $4,000 a year of his own money, which he earns by teaching debating at colleges during the summer.

Bronx Science also runs a large program of other extracurricular activities. Predictably, the school has chess and mathematics teams, an astronomy club, a computer society and even a protozoology club for those who like to study microscopic animals. This being New York, one also finds the Gaelic Society, the Greek Club, the Asian Society, the Jewish Students Union, the Latin Cultural Society, the Italian Club and the Black Organization for Student Strength.

In athletic competition with other schools, Bronx Science "often excels in tennis and swimming, and we do pretty well in basketball," Mr. Taffel says. The school offers all major sports except football. "Our kids are usually about a year younger than other kids in the same grade because they have been accelerated; therefore, they are slighter in build," the principal explains. "Also, football is expensive," he adds.

But students concede that most extracurricular activities suffer from a prevailing obsession with high grades. "Everybody wants to have a lot of H's (for honors courses) on the transcript," says Yvonne Wright, a junior. Michael Horowicz, another junior, adds: "You're always hearing, 'What did you get? What did you get?' I know people who cry when they get 90s."

LABOR REWARDED

Clearly the work gets results. Last year, 57 seniors were admitted to Columbia, 60 to Cornell, 26 to Princeton and 17 to Harvard. Year after year, only three or four schools in the country place as many graduates in the Massachusetts Institute of Technology. Over 99% of Bronx Science graduates go to college (with the low-tuition state and city universities the most popular choices).

Many students say they thrive on the school's competition and welcome the pressure. "Most of us feel it does a lot of good to have a little whip behind you," says Susan Wyler, senior class president.

While insiders may appreciate the school's academic superiority, many outsiders have long resented it. "There was considerable hostility from students in other schools," recalls Leonard Dworkin, a 1957 graduate. "On the bus, all the boys at DeWitt Clinton (another Bronx high school) would chant things like 'Science boys take bubble baths.' We had to compensate by looking tough." (Black jeans were part of his tough-look costume, he recalls.)

A decade ago, New York's elite high schools were under such fire that the city's Board of Education moved to make them more like ordinary local high schools, especially in the freshman and sophomore years. Alleged discrimination was one issue. In the mid-1960s, Bronx Science was probably 95 percent white and at least 80 percent Jewish, Mr. Taffel says.

The Board of Education's plans sparked defensive maneuvers by the four schools—Bronx Science, Stuyvesant High School and Brooklyn Technical High School, all specializing in science and mathematics, and the High School of Music and the Arts. A faculty-parent-alumni lobby persuaded the state legislature to pass a law protecting the schools as competitive-entry institutions and, at the same time, making them more racially balanced.

ADMISSION PROCEDURES

Under its admissions procedures, Bronx Science steers clear of subjective appraisals such as interviews and relies solely on the 1½-hour aptitude test. Most black and Hispanic students are admitted through regular competition with everyone else. However, 10 percent of each incoming class is taken from a list of students (including some whites) from disadvantaged neighborhoods who scored below the cutoff point on the test; from this list, the highest scorers also are admitted. These students receive special instruction in the summer before their first year, and then they must sink or swim on their own. About two-thirds of them graduate, Mr. Taffel says.

Today, black and Hispanic students constitute about 25 percent of the Bronx Science student body, and criticism of the school as racist or elitist has declined markedly since the mid-1960s. But the school largely owes its survival during the crisis to the political muscle of its loyal alumni, teachers say.

Indeed, at Bronx Science, even the handful of former teen-age rebels remember the school with gratitude. One alumnus recalls belonging 25 years ago to the Bronx Science version of a youth gang—15 or 20 students who wore special jackets and smoked cigarets in the boys' room. "We rebelled against the rat race for grades and the 'sissyism' of the place, but I'd go there again," says this graduate, now a highly regarded New York journalist. "The thing is, you were with kids who appreciated an education."

SECRETARY HARRIS PAYS TRIBUTE TO NEW YORK CITY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BIAGGI. Mr. Speaker, it gives me great pleasure to insert into the RECORD an excellent speech delivered by Secretary Patricia Harris of the Department of Housing and Urban Development on the virtues of New York City. Having heard the city maligned so long by Federal officials, Mrs. Harris, words come as a welcome change.

As Mrs. Harris so aptly and eloquently points out the city of New York is unique. Our problems are many but our resolve to resolve is also strong. The remarks speak for themselves and they follow immediately:

REMARKS BY SECRETARY PATRICIA HARRIS

For years urban scholars and analysts have monitored the overall fiscal trends in metropolitan areas. They have been busy documenting the general patterns of growth and decline of America's inner cities and outer suburbs. They have been carefully measuring the fiscal deterioration and the physical distress of the older cities of the Northeast and the Midwest. Despite this considerable research, monitoring and analysis, in 1975, the City of New York shocked the country as it suddenly verged on bankruptcy.

Although many later claimed they had seen it coming, no one was prepared for the crisis. The scholars, the researchers, the analysts, the elected officials, the community leaders, the financiers and the policy makers in City Hall and the State Capitol were swept up in a frenzy of activities, trying to avert the pending default. Washington watched passively as the drama unfolded, awaiting New York's request for Federal aid.

When the request for help in the fiscal crisis came, the response of the previous Administration to New York's fiscal crisis was best described by the now famous Daily News headline of October 30, 1975 which gave New Yorkers the succinct Federal message "Drop Dead."

As the Secretary of Housing and Urban Development I am here today to tell you once again that the Carter Administration has no such message for New Yorkers.

The Carter Administration believes that a healthy, vibrant New York City is necessary to the overall social and economic well being of this nation.

This Administration is prepared to work with New Yorkers who wish to restore this great City's economic vitality just as it is prepared to work with those who care in other cities.

You will see a clear difference between this Administration, and the last on the question of Federal aid to America's distressed cities.

You will see more leadership, more direction, more commitment and more understanding.

This Administration will not give a negative knee-jerk response to New York's economic difficulties. We understand that this City's economic crisis was caused, to some degree, by the City's use of short term borrowing as a revenue source. We also understand to a larger extent, the fiscal plight of this city was shaped by this city's big heart and by economic and social forces beyond local control. The continuing patterns of suburbanization of jobs and industry; regional shifts in the overall economy; a national economy beset by high rates of unemployment and inflation plus sluggish growth; an outflow of middle income residents and an inflow of lower income people, needing higher levels of public assistance—these trends set in motion the economic decline of New York, and it is in this context that the experience of New York must be understood.

For these reasons, the Carter Administration does not view New York as the American prodigal city. (But even if we did, you will recall the treatment of the prodigal son.)

This Administration understands that New York is unique and one of the Nation's greatest assets.

Although it borrowed more than other cities, New York did more for its people than any other city, and the scope of the public services provided is broader and more complex than can be found in any other American city.

As a provider of educational opportunity extended to the Graduate School Level—New York stands alone among American cities.

As a builder of Housing for the poor—New York stands alone among America's cities.

As a dispenser of health and hospital serv-

ices—New York stands alone among America's cities.

Because New York is committed to the provision of social services, the fiscal crisis signalled cutbacks in these services, to groups in great need.

Thus, paring down public sector programs has been a painful process for New York, because New Yorkers know the places where those cutbacks are felt and the people affected.

In the last decade, New York has experienced a period of relatively little population growth. Yet, the demographic composition of the city has changed dramatically. The middle class has exited in large numbers to the suburbs, and has been replaced by the poor, the aged and the minorities.

Nearly one New Yorker in four is black.

Nearly one New Yorker in six is Hispanic.

Nearly one New Yorker in five has an income below the poverty level.

Nearly one New Yorker in six is over age 65.

More than half of the City's adult population has failed to finish high school.

More than a quarter of a million families with children under age 18 are headed by women, and

The mean income for female headed households is less than 60 percent of the mean income for all families.

When all the relevant demographic variables including age, race, ethnicity, income and wealth are analyzed, it is clear that the City's population has a large component of people who depend on public services, and that these families and individuals in greatest need of public services are least able to support the public sector through income generating activities and tax contributions.

At the same time that New York is becoming a city of the poor and dependent populations, it retains a significant group of higher income residents, and continues to subsidize the activities of commuting suburbanites.

Preference and tastes for cultural services and amenities persist, requiring the City to maintain its impressive array of museums, galleries, libraries, landmarks, and parks. We who do not live here, expect all of these resources to be available to us, and indeed, for us, they are New York.

Although the enactment of a City income tax on commuters and selected user charges have increased revenues from nonresidents, the disparities persist, and the compensation does not equal the cost of services.

Clearly, then, this Administration must respond to New York's needs in a way that reflects the unique characteristics of New York's problems—and this is what we plan to do.

Since the beginning of Franklin D. Roosevelt's Presidency, the first 100 days of each new Administration have been closely watched for signs of what can be expected of that Administration during its tenure in office.

Although the Carter Administration has tried to minimize the tendency to over emphasize this period, preferring to focus on the long-term issues, significant program decisions and proposals have been made that clearly indicate a new direction in urban policy.

The Department of Housing and Urban Development has done its part in shaping this new direction.

On matters benefitting New York, we have done the following:

First, we have submitted to Congress a legislative amendment to change the funding formula for entitlement cities participating in the Community Development Block Grant Program. This "dual formula mode" would mean an extra 77 million dollars for New York in 1980 when its hold harmless provisions are scheduled for phase out.

Second, the Department has proposed a three year, 1.2 billion dollar urban development action grant program—to meet the specific, non-recurring development needs of distressed cities.

As it is presently envisioned, the proposed action grant program would make it possible for severely distressed cities to alleviate physical and economic deterioration in two ways: First, through specific economic development activities in areas of population loss, and stagnating, or declining tax base; and Second, through revitalization projects in neighborhoods that exhibit excessive housing abandonment or deterioration.

The special intent of action grants will be to stimulate new and increased private investment while establishing private sector confidence that will protect current investment.

The ultimate purpose of the action grants will be to foster the tri-lateral coalition—the "new urban partnership"—involving government, business and the neighborhoods as equals in the process of revitalizing American cities.

Although we are making no advance commitments, New York is the kind of city that could benefit dramatically from this proposal.

Third, the central office has committed itself to increased levels of technical assistance to the New York Area Office, to help expedite the heavy case load related to insured housing programs.

Nineteen commitments have been made to convert state and city projects to a federally insured status under Section 223(f) of the Housing and Community Development Act of 1974. 8,500 units of housing are involved.

Additionally, Larry Simons, the Assistant Secretary for Housing, informed me that $170 million dollars worth of Section 221(d)(4) projects have been processed since March 1 of this year. 3,500 units of housing are involved.

Mr. Simons also reported that 5,300 units of Section 8 housing will be under construction by May 20.

Ultimately, this activity will have a positive impact on the city's troubled construction industry.

Fourth, the Department has approved the purchase of 14,900 units of state aided public housing.

These projects currently receive state subsidy, but in order to preserve their low rent character the city had assumed an obligation of approximately 12.5 million dollars.

HUD's decision to purchase the properties will benefit the residents in two ways: by insuring the future low rent nature of the projects, and by freeing state funds for needed renovations.

HUD's decision also saves the city the continuing cost of operating subsidies, which would tend to increase each year.

To give you a sense of the scope of this decision, as many as 60,000 people will benefit from this action. If we considered these people to be a community, it would be larger than 95% of the communities currently participating in the Block Grant Program.

Fifth, the Department has already authorized clean-up work on Taino Towers, the East Harlem Pilot Block project. Additionally, an independent evaluator has been hired to ascertain the amount of winter damage to the building, and to provide an estimate for the completion of the work.

Although this project was conceived nearly a decade ago, and was started and stopped under the previous Administration, we are committed to its completion, and we expect the work to begin again in June of this year.

These five actions should be clear indications to you that we are ready to work with you to solve this city's community development and housing problems.

They should also indicate that in the first one hundred days, we have laid the foundation for future federal actions, which will demonstrate not only a marked departure from the past eight years, but also the proper course for the near future.

To keep this Administration on the right course, another significant decision was made.

Rather than declaring the urban crisis to be over, as was done by the last Administration, the President has asked that a Cabinet level Urban and Regional Policy Group be convened. He has given high priority to the development of a coherent national urban policy sensitive to the effects of suburbanization, the continuing plight of disadvantaged groups, and the emergence of economic disparities among different parts of the country.

A comprehensive policy means that the chasm between research and action that opened in recent years will be bridged. Policy decisions must be linked more closely with the world of ideas. In turn, the needs of people must frame the questions we ask. This is what the Urban and Regional Policy Group intends to do as we prepare an urban agenda for the President.

It should be noted that my Deputy on the Urban and Regional Policy Group is Assistant Secretary Donna Shalala, who is no stranger to New York and its fiscal concerns.

CONCLUSION

I have been renewed by this trip to New York City today, to be your guest speaker. I need the sights and sounds of New York. I hope that the news that I have brought encourages you to continue your efforts to restore this great city, because like all great cities, it is a home for all the world.

Yet, there remain those who cannot see the wisdom of our actions, who cannot understand the real and immediate need for the Federal government to increase its aid to New York City.

Perhaps they do not understand what is at issue. I ask them:

Can you imagine a world without London or Paris?

Can you imagine a world without New York?

What is a world without the Met or without the Mets?

What is there to look forward to if we can't take the A train or the Staten Island Ferry?

And believe me, Bloomingdale's in Maryland or Virginia is not Bloomies on 59th.

Certainly it will require a great effort, by many people, to reverse the trends, which caused the economic decline of the city and caused the great pain and suffering to its residents.

But, we must remember John Adam's advice during the challenging days of the Revolution:

"All great changes are troublesome to the human mind, especially those which are attended with great dangers and uncertain effects."

What must be done to make New York City—and all American cities—a place:

Where children are educated to their ability

Where the aged are respected and protected in old age

Where race does not inhibit opportunity

Where workers have jobs to support their families

Where neighborhoods are safe and fun to live in

Where parks are kept open

Where libraries and museums store knowledge

Where men, women, and children are strong, proud, independent and hopeful

Where daily life inspires confidence in tomorrow

What must be done is a major dedication of our lives, our wills and our intellects to realizing this great dream.

Our great cities are the gardens of our culture and you and I must be the gardeners.

As the Secretary of the Department of Housing and Urban Development I have been given the opportunity to meet with the many people who care deeply about the future of their communities.

Most recently I have been with the people of flood torn Appalachia and I have witnessed the havoc wrought by natural disaster.

Just as we at HUD must gather all of our strength to rebuild in the face of this natural disaster, we must summon all of our strength to rebuild this great city.

AMERICAN BICYCLE INDUSTRY 100TH ANNIVERSARY

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. CONTE. Mr. Speaker, it is a pleasure to take this opportunity to draw the attention of my colleagues to the celebration of the "centennial" of the American bicycle industry.

Pedaled by the solitary rider, in tandem on a bicycle-built-for-two, or in groups, the bicycle is the premier recreational vehicle. It has also proven to be a boon to commerce and has contributed to this country's war-time defense. It can help keep you fit and is an economical means of transport. In these days of energy conservation and concern over the environment, the bicycle is the last word in fuel efficiency and pollution control. It can be dressed up—festooned with flags and streamers—or dressed down, stripped of bumpers and chrome to spartan simplicity. Perhaps most importantly, though, the bicycle has provided generations of enjoyment to Americans of all ages.

This weekend, the 100th anniversary of bicycle production in this country will be marked in ceremonies at the Columbia Manufacturing Co. in Westfield, Mass., the direct descendant of the Pope Manufacturing Co., first U.S. producer of bicycles.

The two wheeler was first produced in this country by Col. Albert A. Pope, a Civil War veteran who made a fortuitous visit to the Centennial Exhibit in Philadelphia, saw the European-made bicycles on display and left with the thought of introducing their manufacture in this country.

After a trip abroad, where he bought many of the existing patents, Colonel Pope produced his first bicycle on U.S. soil, a high wheeler patriotically dubbed the "Columbia," in 1877. The Pope firm began operation in Boston, moved to Hartford, Conn., and since the turn of the century has been headquartered in Westfield, Mass.

A true industrial titan of his era, Colonel Pope later diversified his interests into the manufacture of automobiles and motorcycles, in addition to bicycles. Today, while only the bicycle portion of the endeavor has survived, we can also thank this ingenious and enterprising man for yet another accomplishment. Not only is Pope considered the "Father of the American Bicycle Industry," he also earned the title "Father of Good Roads" for his work to promote the improvement of highways for the benefit of all vehicular traffic.

Throughout its century of continuous bicycle manufacturing, the Columbia Manufacturing Co. has remained in the forefront of the bicycle industry. In that time, it has registered a great number of production "firsts," including its latest—it is the first American company to manufacture "mopeds" or motorized bicycles.

Over the years, Columbia Manufacturing Co. has been a good corporate neighbor. One example of that is its sponsorship, concurrent with this "centennial" celebration, of the seventh annual bicycle ride for life, benefiting the local drug rehabilitation center. The company has been and is an asset to the city of Westfield.

At this time, I invite my colleagues to join me in saluting the Columbia Manufacturing Co., one of the oldest and finest firms in my congressional district, and 100 years of bicycle production in the United States.

SETTING THE RECORD STRAIGHT ON U.S. POPULATION GROWTH

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SCHEUER. Mr. Speaker, recent news reports have mistakenly claimed that the United States is nearing zero population growth. Unfortunately, this is not the case. U.S. population is growing by 7,000 a day, or nearly 2.5 million a year.

Erroneous reports that the United States has reached zero population growth have contributed significantly to the lack of concern in this country about the population problem. Policymakers and the general public generally do not perceive the United States as having a population problem—population, they infer, is a problem of the third world, not the United States.

Two major factors are contributing to U.S. population growth. First, the postwar baby boom babies are now having children of their own. Second, more people are entering the United States every year—both legaly and illegally—than are leaving. In fact, it is estimated that some time this year, the rate of growth from illegal immigration will exceed the rate of natural increase. In 1975, the United States had 3,149,000 new babies, and gained 450,000 people through legal immigration and at least 800,000 through illegal immigration. If this pattern continues, our population will reach 320 million in 50 short years.

It is equally important that people understand that the population problem is not just one of sheer numbers. In addressing the question of creating a balance between population and our physical resources, we must also look at how, not just how many, people relate to their environment. Affluent people place far greater pressures on resources than do the poor. For example, while the United States has only 5 percent of the world's people, we consume one-third of the world's nonrenewable resources, including energy.

In determining growth strategies, we must also begin to rethink and repattern our habits. As we are reaching the limits of the Earth's carrying capacity, the nations of the world are becoming increasingly interdependent. Given this, and current U.S. extravagant use of energy and nonrenewable natural resources, the consequences of continued U.S. population growth are real and of great concern.

I have introduced a resolution calling for the establishment of a Select Committee on Population. Should this Select Committee be formed, I would hope that it would have as one of its goals the education of policymakers and the public on the implications of U.S. population growth and on the need systematically to develop a comprehensive national growth policy for our own Nation.

DINGELL-BROYHILL AUTO VIEWS RE CLEAN AIR

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. DINGELL. Mr. Speaker, we are pleased to inform our House Colleagues that our Separate Views, signed by 18 members of the House Interstate and Foreign Commerce Committee, as contained in House Report 95-294 to accompany the Clean Air Act Amendments of 1977, H.R. 6161, are printed in the CONGRESSIONAL RECORD of Friday, May 13, 1977, on pages 14635-14649, inserted by our colleague, WILLIAM D. FORD.

We urge our colleagues to study our views, which make the basic arguments in support of the Dingell-Broyhill auto emission/auto parts and warranty amendment to be offered on the floor of the House early the week of May 23. The amendment we offered in the Commerce Committee failed on a 21 to 21 tie vote, hardly a conclusive vote. We are pleased that the full House will now have opportunity to correct the Committee legislation by adopting the Dingell-Broyhill amendment.

Our bill, introduced earlier as H.R. 4444, the Mobile Source Emission Control Amendments of 1977, with 119 House cosponsors, will be the basis of our amendment to title II of H.R. 6161. It is supported by labor, industry, automotive small businessmen and automotive consumer groups.

Our views point out the massive fuel waste and higher consumer costs which the auto emission standards in H.R. 6161 would impose upon the Nation: Fifteen billion gallons of gasoline lost from 1978-1985 in comparison to the fuel savings of our standards in H.R. 4444.

Our views also:

Contain health arguments supporting our position.

Note the divergent opinions within the administration regarding its "uniform" position on the emission standards.

Reflect that the auto parts and warranty language open the door for more competition in the auto aftermarket business.

The parts/warranty provisions of our amendment (H.R. 4444) protect the consumer and provide freedom of choice.

We address the employment problems inherent in H.R. 6161.

Our views point out that our amendment encourages the development of new auto technologies to meet emission standards and auto fuel economy standards while continuing to clean up our Nation's air.

Again, we request the attention of our colleagues to the Separate Views in the May 13 RECORD and soon to be published Commerce Committee report. We urge adoption of the Dingell-Broyhill amendment on the floor of the House.

COMMUNICATION DISORDERS

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SARASIN. Mr. Speaker, there are more than 20 million Americans who have some form of speech, language, or hearing disorder. Too many of them are children—it is a problem that cuts across all socioeconomic and age stratum. Communication is one of the most important elements of our daily lives and of our entire cultural development. It is the foundation of the continued existence of our American heritage. These disorders are a real threat to successful communication.

Therefore, since May is Speech and Hearing Month, I would like to insert in the RECORD the following statement, which I received from a constituent concerning this problem:

COMMUNICATION DISORDERS

One out of every 10 people has a speech, hearing or language problem and cannot communicate easily. Their problems often aren't obvious in the way they look or act, but when they try to communicate, people fail to understand them or the nature of their problem.

Some children and adults with normal intelligence have language disorders. These children who are delayed in comprehending language cannot understand the relationship between nouns, verbs, and prepositions and need special assistance to overcome these problems. Language difficulties can create problems in learning or may be associated with other learning disabilities.

Children and adults who have articulation problems—difficulties with the way sounds are formed and strung together—receive help from the speech pathologist.

Speech pathologists aid the older child or adult in understanding and controlling stuttering. They also counsel parents that certain types of sound or word repetitions can be quite normal in a young child's speech and should not be confused with stuttering. They advise parents on ways to create healthy communication environments.

Audiologists identify people with hearing problems. The audiologist is skilled in hearing conversation techniques and helps the hearing impaired make the most of their abilities through auditory training—lip reading or speech.

These human communication specialists serve people through special education programs, health and rehabilitation centers, public and private schools, private practices and clinics located all over the country. These specialists can help speech and hearing afflicted citizens with our most human characteristic—communication.

TRIBUTE TO MILTON C. SHEDD

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. PATTERSON of California. Mr. Speaker, more and more, the quality and utilization of the marine environment is in the mainstream of public discussion. Whether it be the seizure of a foreign fishing vessel off our shores, the ongoing United States-Soviet naval capability debate, oil-spill damage, the Law of the Sea negotiations, or the intelligence of some aquatic species, one thing is for sure—our dependency on the oceans, because of their extensive supply of living and nonliving resources, their proper utilization as a pathway for an increased world food supply, and their continuing impact on maritime commerce, national security, balanced growth, technology, and scientific understanding is growing day by day.

The utilization of the ocean resources, and the solving of ocean-related problems, depends directly upon developing a greater understanding of the marine environment, protecting its quality, preserving its integrity, and conserving and managing its living resources.

As a member of the House Committee on Merchant Marine and Fisheries, I well appreciate efforts in our country to further this understanding through scientific research. Likewise, I have a great deal of respect and admiration for those individuals who have been instrumental in heightening our understanding of the seas. One such individual is a California man, Milton C. Shedd.

Milt Shedd, a native of El Paso, Tex., has resided in southern California for some 53 years. Perhaps, Mr. Speaker, it was this experience living near the Pacific Ocean that first stimulated Milt's interest in the aquatic environment.

Milt's academic career was temporarily interrupted in 1943 when he was called to serve our country in World War II. Following 2 years of combat duty with the U.S. Army in the South Pacific, he was awarded the Bronze Star, Silver Star, and a Purple Heart in 1944. In 1946, after a distinguished military career, he was honorably discharged as a captain and went on to complete his undergraduate work at UCLA in 1947 with a B.S. degree in Banking and Finance.

He was affiliated with Paine, Webber, Jackson and Curtis and other New York Stock Exchange firms for 25 years and was involved with the financing of recreational and other business over this period. Milt was instrumental in obtaining the initial public financing for the Packard Bell Corp. and numerous then well-known enterprises.

In 1961, as one of two senior partners in a partnership of four, Milt parlayed a lifelong love of the sea into a great marine-related enterprise—Sea World. Sea World, which now operates oceanarium complexes in California, Florida, and Ohio, has thus far displayed the wonders of the sea to over 35 million people. Milt has served as Sea World's board chairman since its inception, except for several months in 1974. Furthermore, he is the sole owner of Axelson Fishing Tackle Mfg. Co., Inc., a sportfishing tackle manufacturer and distributor with sales worldwide, and is cofounder and majority stockholder of Swordfish, Inc., a commercial fishing operation.

I am pleased to bring to the attention of my colleagues that on May 24th of this year, a major event will take place in Milt Shedd's life—the official dedication ceremonies of the Hubbs-Sea World Research Institute in San Diego, Calif. This nonprofit, tax-exempt marine scientific research institute was originally founded, as the Sea World Research Institute, by Milt in 1963, himself an avid fisherman and researcher as well as an obviously highly successful businessman. In fact, he personally has participated in numerous joint marine fisheries research ventures with the California Department of Fish and Game, the National Marine Fisheries Service, and the Mexican Government. He just recently returned from an expedition in Baja, Calif., where he and researchers from the Woods Hole Oceanographic Institute combined their efforts in an attempt to further understand migration patterns of certain aquatic species in order to develop more rational conservation and management programs there.

The upcoming dedication ceremonies, honoring Dr. Carl Hubbs of the Scripps Institution of Oceanography, is the culmination of years of planning and consideration by Milt Shedd. He has secured one of the world's most brilliant and capable marine biologists, Dr. William E. Evans, to serve as director of the institute. The course of action planned for the next several years—marine mammal population studies, aquaculture development and development of aquatic science education programs—is indeed exciting.

Mr. Speaker, Milton Shedd is in the forefront of that new breed of businessmen who subscribe to the new business ethic which demands that commercial enterprises recognize and act upon their public service responsibilities and at the same time strive to be profitable. Sea World and the Hubbs-Sea World Research Institute are perfect examples that this ethic is not only acceptable,

but indeed as necessary as it is successful.

Mr. Speaker, my wife, Mary Jane, joins me in congratulating Milt Shedd on his many contributions to furthering our understanding of an environment we may well have to rely on to sustain life in the years ahead. We are sure his wife, Peggy, and his sons, Steve and Bill, are as proud of him as those who have witnessed his many accomplishments.

IS PRESIDENT CARTER GIVING AWAY THE PANAMA CANAL?

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. RUDD. Mr. Speaker, I am sure that the American people will not be deceived by the propaganda campaign that is being waged in the press and elsewhere to pave the way for a total U.S. giveaway of the Panama Canal.

Such a propaganda item appeared this morning in the Washington Post, with the enticing announcement of "a breakthrough in the Panama Canal treaty negotiations."

But there has been no "breakthrough." This is just a continuation of the build-up towards total surrender of the Canal to Panama Dictator Omar Torrijos.

The headline of the Post story deceivingly proclaimed, "Panama Accepts U.S. Defense Role." A kicker on top of the headline stated, "Shift Could Speed New Treaty." And the two lead paragraphs of the story from Panama City by free-lance correspondent Marlise Simons stated:

A breakthrough in the Panama Canal treaty negotiations is considered near, as Panama moves closer to accepting U.S. demands for a continuing role in defending the waterway after it passes under Panamanian control.

In a lengthy interview, Panama's strongman Brig. Gen. Omar Torrijos said, "Panama can accept the U.S. right to intervene against a third country to protect the neutrality of the canal."

Mr. Speaker, what the headline and these deceiving lead paragraphs of this propaganda story did not properly highlight was the emphatic statement by General Torrijos buried on the paper's inside pages that, "We, Panama, will not accept anything in writing that can justify an American intervention in the future."

What kind of threat is this from Panama's dictator? Under current treaty provisions, which constitute international law on ownership and control of the Panama Canal, the United States has complete legal and political control over the canal and the Canal Zone.

Our people's investment to purchase all rights in the Canal Zone, and in financing canal enterprises over the past three quarters of a century, amounts to more than $7 billion.

The American people are not about to sit by and accept a new treaty that totally gives up all U.S. rights to the canal, in order to solidify and guarantee Dictator Torrijo's political control in Panama. Neither are they likely to accept a commitment to defend the canal unless we have continuing control over operation and security of the waterway under international law.

Mr. Speaker, I believe that the President owes the American people a full and honest accounting now of the administration's position on this matter, and the commitments being made by our negatiators for a new treaty.

I do not believe that the American people will accept a Panama Canal giveaway. If that is what is being negotiated by our American representatives in Panama, the President should forthrightly acknowledge this to our people.

Such a policy would be a complete reversal of the position taken by the President during the recent election campaign. If the current administration position is to negotiate a new Panama Canal treaty that will give up U.S. ownership, control, and operation of the canal and the Canal Zone, such a policy should be debated, endorsed, or rejected by the Congress before these United States-Panama treaty negotiations proceed one step further.

Mr. Speaker, I include the complete Washington Post story at this point in the RECORD:

PANAMA ACCEPTS U.S. DEFENSE ROLE

(By Marlise Simons)

PANAMA CITY, May 16.—A breakthrough in the Panama Canal treaty negotiations is considered near, as Panama moves closer to accepting U.S. demands for a continuing role in defending the waterway after it passes under Panamanian control.

In a lengthy interview, Panama's strongman Brig. Gen. Omar Torrijos said, "Panama can accept the U.S. right to intervene against a third country to protect the neutrality of the canal.

"Above all, this is what our Latin American neighbors and allies demand. To a great extent their economies depend on the freedom of passage."

The formula defining the terms of the canal's neutrality has been the main outstanding point in the latest, and supposedly last, round of discussion about the basic issues. Agreement on the neutrality clause is believed, therefore, to clear the way for the new treaty, which has been the cause of considerable tension between the two countries since 1964.

Until now Panama's official negotiating position has been that under the new treaty the United Nations should act as guarantor of the waterway's neutrality. Washington, however, wants a bilateral guarantee involving a considerable U.S. role.

Even if Panama is now accepting—at least in part—Washington's most crucial demand, the wording of the neutrality formula is still a delicate point that may set off new and lengthy discussions.

According to Torrijos, the Panamanian government will be hammering out its answers to a new set of U.S. proposals today. This morning the Panamanian negotiating team and the country's top military and civilian officials arrived at his home in Farallon, after holding talks among themselves this weekend. They were to return to Washington tonight to resume the talks on Tuesday morning.

Torrijos declined, however, to disclose details of the Panamanian position, adding, "I can say what we do not want. We will not accept anything in writing that can justify an American intervention in the future."

Torrijos went on to say that the new U.S. proposals brought home by his negotiating team were "very good," and proved to be a positive turn in the tense situation that arose during the talks in Washington last week. A problem arose then that almost led "to a breakoff of the talks," he said.

On Wednesday, according to Torrijos, the U.S. negotiating team suddenly produced new demands on points already agreed on.

"So I told my people 'This is no striptease, we can't accept this. Tell the Americans that if we want to reach an agreement we should all get undressed together.' "

Torrijos then reportedly instructed his representative to return to Panama in 48 hours if the United States "did not stop fooling around."

"The Americans bugged the telephone so they must have heard us," said Torrijos. "The next day they came up with these positive proposals."

Seasoned observers here believe that Panama's reference to the will of its Latin American neighbors may provide it with the face-saving device it will need to accept a U.S. defense role.

Torrijos' international campaign to win support in his efforts to get control over the U.S.-owned canal has included regular consultations with Latin America's four civilian governments—Costa Rica, Colombia, Mexico and Venezuela—which have consistently advocated his cause.

"These four presidents have burned their ships for another man's cause," Torrijos said. "It is only just that they give their opinion. For example, they are now being sent the minutes of our meeting with the Americans."

According to Torrijos, the "rightist military regimes of the Southern Cone are pushing us the other way and saying that the United States is already giving away too much. We may not like an American role, but we will have to find a way to keep the peace with the rest of the continent."

SCOUT TROOP'S GOLDEN ANNIVERSARY

HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. APPLEGATE. Mr. Speaker, it is indeed a great privilege for me to bring to the attention of this House an occasion of importance to those associated with the Boy Scouts of America.

On Sunday, June 26, 1977, Troop 10 of Steubenville, Ohio, will celebrate their Golden Anniversary in scouting and honor all deceased committeemen, scout leaders, scouts and benefactors. It will be a memorable occasion, marking the dedication of these past leaders and positive influence they have had on a countless number of men from the past half-century.

The Boy Scouts of America is an institution in this country and one that over the past years has come to stand for honesty, trustworthiness, and patriotism. But scouting has attained these qualities only because of the type of men that Troop 10 is honoring.

It would be my hope, Mr. Speaker, and

I am sure that of many of my colleagues, that we will continue to have many more individuals such as those being honored by Troop 10 who are willing to help our youth to develop them into better men and women.

"THE ROLE OF GOVERNMENT IN OUR LIVES"

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. GILMAN. Mr. Speaker, recently I was pleased to have conducted a contest for high school seniors in the 26th Congressional District of New York on the subject of "The Role of Government in Our Lives."

Because of the intense interest shown in the writings of these students for their government and the role it plays in their lives, it is my privilege to submit for the review of my colleagues, the essays of the fourth and fifth place winners and two who received honorable mention.

The essays follow:

[Fourth Place]

"THE ROLE OF GOVERNMENT IN OUR LIVES"

(By Robert James Orr, Pine Bush, N.Y., Pine Bush Central High School)

The government has two major roles in our lives. The first role is governing our actions and our deeds, through laws decided upon through the representation of the people. The second role is the governing, not only of actions but thoughts themselves, by the example set forth by our representatives.

Governments must lead the people, but this leadership must not be an autocratic form led by persons with a "holier-than-thou" attitude toward the populace. Rather it should be a representation of the people's will, tempered by the cautious judgment of the representatives. This is only possible if the people can make their wishes known. The government must make available the means for people to communicate their wishes. This process gives the people the security of knowing that the government is truly representing them, and instills a sense of pride and responsibility in the people.

The government is also expected to be an example for the people to follow. The elected representatives received their post because they were thought by the people to have a high moral character coupled with the appropriate intelligence to guide their constituents. If the government does not uphold this image, it causes the people to lose faith, and to become discontented with the government. A good example inspires the people to improve their own moral fiber. The people must have a model, someone who can prove those good morals, as an essential part of life.

The government, therefore, has a very difficult job. Not only must they represent the people fairly, but they must also do this with a sound moral background in their decisions. People must be shown that honesty is, indeed, the best policy. Only in this way will we survive these troubled times

[Fifth place]

"THE ROLE OF GOVERNMENT IN OUR LIVES"

(By George F. Burton Nanuet, N.Y., Nanuet Senior High School)

To understand the role of government in our lives it is necessary to first take a brief look at its effects on our daily lives, for from cradle to grave it plays a significant role.

The doctors who delivered us at birth are licensed by the state. The house we live in must comply with the local building codes and zoning laws. The food we eat is government inspected. The cars we drive must be registered with the state government. The money we earn to purchase that car is taxed by the federal, state, and local governments. Should we lose our job, we can apply for state or federal unemployment insurance or federally funded welfare. In the eyes of government, we are nothing more than a number—a Social Security number.

In my opinion, government must regulate, but not hinder. It has a duty to help people help themselves. Government should respond to the wants, needs, and demands of its citizens in a fair, effective, and compassionate manner.

But perhaps the question to be addressed is this: What is the role of our lives in government? For our vote, our participation, and our voice decides what our government's policies shall be. In the final analysis, the citizens in a truly democratic society determine what part government shall play in their lives

And if that government proves to be incessantly unresponsive, it is our duty, as stated in the "Declaration of Independence," ". . . . to alter or to abolish it."

[Honorable mention]

"THE ROLE OF GOVERNMENT IN OUR LIVES"

(By Stacy Lee Saetta, Pearl River, N.Y., Pearl River High School)

As America enters its third century, we, the citizens of the United States, are looking forward to a bright and dynamic future. For two hundred years, the people of America have employed their government to secure the unalienable rights of life, liberty, and the pursuit of happiness. The United States local, state, and national governments have maintained the provision of improvement and protection of society (Keeping in mind the common interest of the members of society) and has managed its task of amelioration exceedingly well.

The United States government is a vast and varied organism of influence over the sphere of human society. Its function is to serve its people in a manner that is significant and meaningful; that is watchful and protective; that will allow the individual, as well as society, to grow and to evolve to his or her full potential. The branches of the United States government should maintain the foundation, the substructure, the base, and the support which underlie the success of America as a nation; for from this base arises America's eminence, unbound and unrestrained by compelling governmental influence.

The role of government is by no means a "basement task,; something which can be ignored most of the time, only to be taken out for a dusting and for nostalgia. The role of government is a vital and viable one: The American citizen turns to government for support and for help, both as an original source of aid and as the last hope in his or her life. Government has demonstrated superiority in the management of large projects: a parks and resources system, a public library and education system, a national postal system, a defense system. The list of successful projects is endless.

Government maintains the holistic nature of society and reminds its citizens of the mutual needs and requirements of their neighbors. For this reason, the Government of the United States of America is a lasting and sustaining one.

[Honorable Mention]

"THE ROLE OF GOVERNMENT IN OUR LIVES"

(By Sally Pinzow, Pearl River, N.Y., Nanuet Senior High School)

"No man is an island unto himself." If man lived alone he could provide for himself, tame the elements, and conquer his environment. He would not need a government. A newcomer upon this scene poses the question, what rights does he have and what rights does the first man have? These are examples of man's need for government—to arbitrate in the discussion of rights, to decide laws, standards, norms, and to protect the rights of all people. Man is a social animal and a specialized animal; he requires representation to tend to these needs and organize them into a basic structure for his society.

The more important the task, the higher the requirements are for the representative organization and the greater its responsibility and power will be. This representative organization must be elected by all it will serve. We must also choose the individuals in this organization who will represent us to present our views and protect our rights in dealing with other communities, states, and countries.

To live in peace and order, we must have these representatives to establish the most equitable manner of economics. As was illustrated during the birth pangs of our country, a standard value is needed for ease in commerce. An impartial arbitrator has to be found to establish a common currency. This arbitrator is our government.

A foreign country infringes upon our nation's rights, our government negotiates for us. A person breaks the laws and attacks the innocent; our government apprehends him and insures his punishment.

The government enacts legislation upon these matters to insure our freedom; the freedom to interact with one another and guarantee recourse for undue advantage taken upon us.

GRAND RAPIDS, MICH., STUDENTS VISIT WASHINGTON TO PARTICIPATE IN 1977 CLOSE UP PROGRAM

HON. HAROLD S. SAWYER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SAWYER. Mr. Speaker, the third and final group of students and teachers from the Grand Rapids area were in Washington, D.C., last week to participate in the 1977 Close Up program. Close Up is a nonprofit, nonpartisan forum for the involvement of youth in government. During the past 2 years over 1,100 students and teachers from 45 high schools in the Grand Rapids/Kent County area have had the opportunity to participate in this program and increase their understanding and appreciation of the nature of our system of government and its opportunities for involvement.

The success of this program in Grand Rapids is due to the diligent efforts of many people. But there is one person who stands out for his leadership and dedication. Mr. Garrell Adler, deputy superintendent of the Kent Intermediate School District, has been instrumental in the growth and continued success of the Grand Rapids Close Up program. He

has worked successfully with the business and philanthropic community to raise matching funds to extend fellowships to students and teachers to enable them to participate in the Washington program. Through his leadership, two State programs and three local programs modeled on the Close Up format have been carried out in order to extend the concept of learning and involvement. Jerry Adler's enthusiasm for young people and learning, and his dedication have earned him the respect of educators, the business community, and political leaders.

I take this opportunity to applaud Mr. Adler for his dedication to education and youth.

LET US AVOID POLITICS ON THE PORNOGRAPHY ISSUE

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. RANGEL. Mr. Speaker, Amitai Etzioni, a very distinguished professor of sociology at Columbia University has written a column which appeared in the New York Times on today regarding the issue of pornography. In that article, this world famous sociologist carefully puts forth the case that pornography may not be as bad as most people think, and worse that the issue is receiving additional publicity as a result of the political demagoguery which some public officials feel may be to their benefit.

The record should be clear from the outset. I am personally not for a proliferation of either lewd literature or of pornographic films. I find both quite distasteful. However, I will defend an individual's right to have this matter available even though I do not subscribe to the contents contained therein. I do this on what I consider are two very sound principles.

Once we as a nation start deciding what individuals can and cannot see and read, we commence on an uncertain road, without any idea of where it will lead or end. For if we say that a particular film is "smut" and thus should be banned, who is to say that 15 years hence the new leaders of this Nation will not seize this action as precedent for their banning the works of Shakespeare as detrimental to their interests? I do not want to give the future leaders any such weapons.

Aside from the legal questions involved, a question must be raised as to does pornography lead to crimes of sex. Apparently many people believe this theory but as Dr. Etzioni carefully points out, this theory just does not fit with the facts. Based upon carefully controlled studies that he is familiar with, Dr. Etzioni states that those people who are "sexually active" are more prone to indulge in pornography than those who are not. This thesis which Dr. Etzioni put forth was supported by the 1970 Presidential Report on Pornography, and thus lays to rest the belief that the more pornography, the more sex crimes.

I know the pornography issue raises within many of us many strong emotions and a sense that something must be done to curb its flow. My colleague from New York, JOHN MURPHY, is attempting to take remedial action to prevent the use of children in the making of pornographic films. I believe that his efforts are laudatory and thus I am a cosponsor of his legislation. But we must be very careful that in our haste to bring this matter under control, we don't take action that seriously jeopardizes the rights and liberties of our citizenry today and of tomorrow.

I would hope that my colleagues would carefully review the comments made by Dr. Etzioni on this issue. It is my hope that his words will help to reduce many of the myths that exist relative to this matter. The article follows:

"PORN IS HERE TO STAY"

(By Amitai Etzioni)

Mayor Beame may well be sincerely disgusted with pornography; only he is much better at keeping his feelings about erotic material private when no election looms.

After all, about 80 percent of all Americans favor tough laws against pornography. But porn is here to stay: Several of the joints Mr. Beame closed were back in business the same night—and the Mayor's drive is almost exclusively for the voters' excitation, not satisfaction—as good a definition as any of an unsavory act.

Studies of pornography document not its dangers but rather the difficulties many citizens experience in dealing with sexuality openly. These studies suggest that most adults who view X-rated materials are not affected by them, or only briefly. During that period, they do a little more of what they have been doing anyhow.

Thus, in the P.G.-rated language of scientific studies of pornography, we learn that "when masturbation follows exposure, it tends to occur among individuals with established masturbatory patterns" and that while "coital frequency increases" it is among "experienced persons with established and available sexual partners." In contrast to the view that porn corrupts people, most experts concur that "established patterns of sexual behavior were found to be very stable and not altered substantially by exposure to erotica," to quote the "Report" of the President's Commission on Obscenity and Pornography (1970).

Contrary to the popular view that porn breeds sex, it seems mainly the other way around: Those already having an active sexual appetite add porn to their menu. Porn is consumed more by men than women, more by younger than older persons, more by people less likely to attend church, and by those generally more active sexually.

In an often-cited experiment, a bunch of young men at the University of North Carolina were served up "repeated" and "prolonged" porn. Result: monumental and increasing boredom. Censorship, this study suggests, makes the material less accessible and shrouds it with the lure of forbidden fruit; ready availability is the best treatment.

Even for those who continue to wallow in porn, there is little support for the widely held notion that pornography breeds criminality. Studies comparing delinquent with nondelinquent youth found generally they were exposed to pornography for the first time at about the same age, viewed the same stuff, guzzled up similar amounts, etc. As to sex crimes, porn seems to provide a relief rather than a stimulant.

In recent rallies against smut in Times Square, porn, prostitution and crimes of violence have been lumped together. Theater and restaurant owners and others are agitated over the effects of concentrations of smut on their neighborhood. But porn is not the cause of prostitution or mugging, and its concentration in Times Square is largely the result of its being persecuted elsewhere in the city.

If it were accessible to all who want it in their neighborhoods, X-rated theaters would be sprinkled across the community the way newsstands are. Explicit displays on the street, which make it impossible to avoid porn, might be curbed. But if it is freely available indoors, it will not be pushed into the streets and flood Times Square. Of course, prostitution and crime will still have to be dealt with in their own right.

Why do 67 percent of Americans agree with the statement in a 1976 Daniel Yankelovich poll that "the government should crack down more on pornography in movies, books and nightclubs"?

About half of these people are "sexual hard hats." They state quite openly that they would wish to suppress it even if there were no evidence that it is harmful and if it were consumed only by consenting adults in their own homes. Indeed, while they are at it, they would also suppress speeches against God and books that attack our form of government.

The other half, which contains a high number of older, less-well-educated, smaller-town folk, also more conservative than average but not quite so blue-nosed about it. They are the soft core of the anti-porn camp.

Many of both groups have difficulty accepting their own sexuality and feel that unless the authorities keep the lid on, their urges may erupt.

A democratic society requires holding at bay these sexual anxieties and their repressive political expressions. Politicians who pander to these feelings would do well to reconsider their campaign themes.

GREEK CONTRIBUTIONS TO DEMOCRACIES

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. FLORIO. Mr. Speaker, as you know, citizens of Greek ancestry recently celebrated Greek Independence Day on March 25. I would like to take this opportunity to belatedly join in their celebration.

As we all know and appreciate, the United States and Greece have long enjoyed amicable relations, and I believe that this stems from the American respect for the Greek devotion to freedom and independence which they celebrated on the 25th of March. This devotion laid the foundation for the Greek culture which was to contribute so much to Western civilization. Modern man is indeed fortunate to have inherited the many examples of Greek art, education, and government. All of my colleagues will undoubtedly agree that Greece has served as a link between predecessor cultures and those that were to follow, such as the Roman and Arab cultures. These cultures in turn transmitted Greek ideas into our ancestors.

Not long ago I had the great honor of being initiated into the American Hel-

lenic Educational Progressive Association—AHEPA—in ceremonies in Cherry Hill, N.J. and I am pleased and impressed with the philosophy on which this association and others like it are premised, and also pleased with the list of outstanding contributions they have made to the Greek-American peoples. And as a member of AHEPA and as a Member of Congress, I salute the Greek people, not only of this Nation, but of the world for their immense contribution toward the formation of democracies around the world.

FERDINAND RUGE, EDUCATOR, DIES

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BYRON. Mr. Speaker, I am deeply saddened to report that Washington has lost a distinguished and highly respected educator, Ferdinand E. Ruge. Mr. Ruge passed away last week at the age of 76. He was a remarkable individual who taught and inspired students at St. Alban School for Boys for the past 44 years. He had a profound influence on all individuals who were privileged to know him and I am sure I am speaking for other former students of his when I express the deep sense of loss we share with his family and friends. His contributions to others are immense and incalculable and go far beyond the teaching of English to his students, as important as that is. His complete devotion to helping others served as a model for his students and associates to emulate, though none could ever hope to equal it.

I include a recent article from the Washington Post on Mr. Ruge to be entered into the RECORD at this time:

FERDINAND RUGE, ST. ALBANS ENGLISH MASTER, DIES

(By Alice Bonner)

Ferdinand E. Ruge, 76, Master of English at St. Albans School for Boys for the past 44 years, died of a heart attack Sunday at Doctors Hospital.

After teaching at several other schools and once working as a stockbroker, he devoted more than half of his life to St. Albans where he became something of a legend among students and colleagues.

More than a teacher of the language, he was an inspiration to several generations of boys, some of whom remembered him as a demanding, but beloved and unforgettable instructor.

"He taught not only English, but integrity, honesty and responsibility," said the Rev. Charles Martin, headmaster of St. Albans. "He demanded work from his students and friends, but he always demanded more work from himself."

Mr. Ruge served as assistant headmaster from 1960 to 1968, as adviser to the St. Albans News, and as a member of the school's board of governors, in addition to chairing the English department for 44 years, but "it was in the classroom that he made his most significant contribution," his fellow teacher Paul Piazza said.

Astronaut and St. Albans alumnus Michael Collins, now curator of the National Air and Space Museum, said Mr. Ruge "kept his students sitting on the edge of their seats. All in all he was the best teacher I have known."

Piazza said Collins reflected the indebtedness felt by thousands of former students in his book "Carrying the Fire" when he expressed appreciation to "Ferdinand E. Ruge . . . who taught me how to write a sentence."

Mr. Ruge was known not only for his insistence that students learn to write "clear, simple and reasonably graceful English," as he expressed it, but for his unique ways of making them retain the lessons.

Bruce Meader, director of development at St. Albans and another former student, recalled that Mr. Ruge drew elephant tracks on a returned paper to "indicate that the writing was particularly slow and ponderous."

"He loved his work and he found satisfaction in giving countless extra hours to boys who needed his help," said former assistant headmaster Alfred True. "His zest for life and his direct, often blunt approach gave him an easy rapport with the boys he guided, instructed and entertained."

"Mr Ruge used the teaching of English as a pretext for teaching about life," recalled another former student, Donald Graham, executive vice president and general manager of The Washington Post. "He put the English classics in front of 17-year-olds and insisted that they think not about how the sentences parsed, but about what the words meant."

Mr. Ruge used his own time on Saturday mornings to give special attention in extra classes to boys who needed more help.

He was the trainer of the school's spelling team, and drew a surprising crowd of about 200 alumni last Fall when he held a nostalgic spelling bee at St. Albans.

"A commanding presence, a sure knowledge of how to deal with boys and a vast, yet unassuming culture all went into making him the most influential teacher at St. Albans that I have known," said John C. Davis, a 35-year St. Albans official and present assistant headmaster.

J. Willard Marriott Jr., president of the Marriott Corp., who noted that Mr. Ruge taught two generations of his family, said he "had a great sense of humor and was a superb teacher . . . loved and remembered by all of his former students."

A native of Liberty, N.Y., Mr. Ruge spent his boyhood in Decatur, Ga., and earned an AB degree from the University of Georgia in 1921. He received a masters degree from Harvard in 1929.

Before coming to St. Albans in 1933 he had been a stockbroker for W.H. Byers and Company and had taught at several schools in the East and in California.

Mr. Ruge was hospitalized for eye surgery when he was stricken on Sunday.

He is survived by his wife, the former Louise Baldwin, of the home, in the 4600 block of Asbury Place NW; a son, Richard of Washington; a daughter, Elizabeth Noe, of Ridgewood, N.Y.; a brother Arthur, of Lexington, Mass.; a sister, Genevieve Riddle, of Minlation, South Australia, and one granddaughter.

DR. YOSEF BEGUN CASE

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. DOWNEY. Mr. Speaker, once again I want to bring to your attention and to the attention of my colleagues another case of religious discrimination in the Soviet Union.

Dr. Yosef Begun is a scientist and former senior scientific worker in the Central Scientific Research Economic Institute of the State Planning Commission of RSFSR. He was discharged in January 1971 after applying for a visa to emigrate with his young son to Israel. Dr. Begun's visa was refused on the grounds that he had previous access to information classified as state secrets. However, the Soviet Government has waived this prohibition 5 years after access to that information has passed. In Dr. Begun's case 6 years have gone by.

After he was fired in 1971 Dr. Begun began giving private Hebrew lessons as a means of support. His application for a state teaching license was denied and subsequently on April 14, 1977, he was arrested and charged with "parasitism," a euphemism for unemployment which the Soviet Government ironically is responsible for.

Dr. Yosef Begun is due to stand trial tomorrow on this trumped up charge of parasitism. Many people familiar with Dr. Begun's case fear that his trial may be the beginning of a new era of religious persecution in the Soviet Union. I urge my colleagues to communicate their opposition of this trial to Soviet officials as I have.

CAMPAIGN FUND WORRIES

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. GRASSLEY. Mr. Speaker, public financing of congressional campaigns is another one of those pet projects of the administration that many of us regard as a grave mistake. I have expressed my opposition to the concept many times. It would, I believe, serve to perpetuate incumbents and diminish citizen participation in political campaigns. It would also be very costly to the taxpayers.

A recent editorial in the Mason City, Iowa, Globe-Gazette outlined some of the problems with public financing of congressional campaigns. The paper holds what I hope will be the mistaken notion that public financing will become law, even though it is not in the best interests of the public. I hope that the majority of Americans will air their opposition to public campaign financing and pressure Congress to reject this ridiculous and dangerous proposal. But in case that does not happen, it would be wise for the House and the public in general to read the Globe-Gazette opinion.

[From the Mason City (Iowa) Globe-Gazette, May 5, 1977]

CAMPAIGN FUND WORRIES

Public financing of congressional campaigns seems to be almost a certainty for the 1978 national elections.

Such financing would resemble that used in the last presidential campaign. The campaigns of House and Senate contenders would be financed from $1 income tax checkoffs—and with ceilings on campaign spending.

Right now, the main disagreement seems to be over whether to include primary races in the system, as is done on the presi-

dential level. While there are such details to work out, the public-finance proponents seem to have the votes to set up a congressional system.

The purpose of publicly financing campaigns is to reduce the role of special-interest groups and fat-cats in selecting (and then influencing) office-holders. It's a worthy purpose.

However, objectors to the plan make points worth considering.

A constitutional objection is that unlimited contributions toward a cause or candidate is a right of self-expression. This seems to be a rather slim case, and in any event it's one that must be decided at law rather than in public debate.

There is also a question as to how massive a bureaucratic system will be necessary to administer campaign finances from coast to coast.

But, legalities and logistics aside, there are worrisome philosophical objections: That public financing combined with spending ceilings could strongly favor incumbents, weaken all political parties and tend to muzzle third parties.

Efforts must be made to measure and minimize the campaign advantages from office-holders' perquisites.

And political groups must find new ways to involve citizens in their causes. Traditional activities linked to fund-raising won't be necessary, and with spending limits there won't even be as many bumper stickers to hang.

Public financing of campaigns has many merits, and—more important—it seems to be coming whether we like it or not. It is thus up to the public to insist that the system be monitored and that drawbacks be brought under control.

If the setup works mostly to bar new faces, new ideas and new political movements, while diminishing citizen involvement in traditional parties, it could be an invitation to revolution.

DR. CARL L. HUBBS AND THE LIVING LEGACY TO HIS LOVE OF THE SEA

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BURGENER. Mr. Speaker, on May 24, one of my constituents, and more importantly, one of the world's premier ichthyologists, will be honored with a living legacy befitting of his boundless dedication toward understanding the aquatic world and its inhabitants. On that day, his name will be bestowed on the Hubbs-Sea World Research Institute, one of the exemplary facilities for oceanographic research in the Nation.

It is fitting, as well, that Congress pay tribute to this extraordinary man whose unrelenting pursuit of the truth of the world's waters has so broadly expanded man's knowledge of that domain which fills over three-quarters of our planet and whose personal example has inspired so many others around the globe to join him in that pursuit.

Dr. Carl Leavitt Hubbs' long and distinguished career began in San Diego when the blossoming naturalist/scientist became intrigued by the study of birds. Later at Los Angeles Junior College and then at Stanford University and the University of Michigan, Dr. Hubbs' unquenchable thirst for a better understanding of aquatic life and a more thorough understanding of a realm that, at that time, remained largely mysterious, propelled the young biologist into the forefront of his profession and paved the way for a career that would bring increasing order to a misunderstood segment of science.

Dr. Hubbs' affiliation with the Scripps Institution of Oceanography in San Diego, of which he is professor emeritus of biology, began in 1944 and has really never ended, as Dr. Hubbs has never retired. Along with his wife Laura, Dr. Hubbs continues to work full days in their shorefront laboratory, striving continuously to further and broaden man's knowledge of the sea.

It is appropriate, Mr. Speaker, that so distinguished an institute should bear the name of Dr. Hubbs, whose lifelong contributions to the furtherance of scientific understanding have been immense. I am certain my colleagues in the House join me in congratulating a man who has never needed honor—only the satisfaction of a life's work well done and continuing still.

TRANSPORTATION AND ENERGY: GAS TAX UNFAIR TO LOWER AND MIDDLE INCOME AMERICANS

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SHUSTER. Mr. Speaker, a short time ago I outlined reasons why President Carter's proposed 50-cent-per-gallon gas tax increase as an energy conservation device would be unfair to rural Americans. I would now like to share with my colleagues the reasons I believe such a proposal is unfair to poor and disadvantaged Americans.

President Carter has proposed that the current 4-cent-per-gallon excise tax on gasoline be increased by 5-cents-per-gallon increments, up to a maximum 50-cent-per-gallon increase, when nationwide gasoline consumption exceeds established targets. Ignoring for the moment the regressive nature of this proposal, and the relative price inelasticity of demand for gasoline, it is abundantly clear that the segments of our population which would bear the greatest burden and suffer the most losses are those who are poor or economically disadvantaged.

The proposal to impost progressively heavy taxes on domestic crude oil could make the retail price of fuel skyrocket in future years. Representative CHARLES A. VANIK, a member of the tax-writing Ways and Means Committee, was quoted in the April 21, 1977, Christian Science Monitor as projecting that even without the gas tax increase, the retail price of gasoline may climb by 15 cents per gallon in 2 years. That would make the average price of gasoline around 80 cents per gallon, and the proposed gas tax hike could push that to well over a dollar a gallon a few years hence—while I do not rule out a few cents per gallon to help pay for America's transportation needs, a 50-cent-per-gallon tax is simply too much for the average American to bear.

The Carter tax would have little, if any, effect on those in our society who are blessed with substantial incomes or other means of support, but it would have a severe adverse impact on those forced to live on fixed or meager incomes.

Columnist William Greider summed it up nicely when he said:

> Cars spread equalitarian life values through America—the values of time and mobility—and they spread these qualities downward in our society, more directly than any patch-up government programs. Cars give people more choices. (Greider, William. "Car Crazy in America, A Nation in Overdrive," *Washington Post*, April 25, 1977.)

And the lower economic strata in America enjoy more choices than people of comparable means anywhere else in the world—and the reason is mobility.

Americans own 45 percent of all the cars in the world today, even though we have only a fraction of the world's population. Mr. Greider went on to say in his thought-provoking article that we have more than one car for every two citizens in the United States, while in France there is less than one car for every three citizens and in West Germany, three out of four do not enjoy car ownership.

Thus, the lower economic classes in America can boast of a lifestyle that may be modest by some standards, but must rank at the very top when compared to comparable economic classes around the world. A 50-cent gas tax increase would seriously threaten that lifestyle by making mobility more expensive and limiting the number of choices now enjoyed by Americans in the lower and middle income brackets.

It would make it more expensive for lower income people to engage in their daily activities. It would severely limit job choices by making it prohibitively expensive to take a job that would require extensive travel or commuting. And it would inhibit cultural and recreational opportunities by making it more costly to get to them.

In many cases, alternative forms of transportation, such as buses or subways, may not be available.

The White House will tell you that the gas tax increase is being proposed as a penalty to encourage energy consciousness, and the revenue raised will be redistributed throughout the population so as to avoid a windfall situation. They say, for example, that the rebates on fuel-efficient cars will help ease the pain of higher taxes.

But I ask you, Mr. Speaker, how many poor people do you see driving around in new cars? How many lower or middle income Americans trade in their cars every 2 or 3 years? Not many. It is not at all unusual to see cars 10 or 15 years old on the road, and even when they do trade in, they usually buy a used, rather than new, car.

Additionally, any increase in the cost of fuel is felt disproportionately by the poor and disadvantaged. The Environmental Protection Agency reports that the average annual fuel cost for a mid-size American car ranges from $488 for

a small engine Pontiac Le Mans to $886 for big engine Dodge Monacos and Plymouth Furies.

If we make the assumption—which may not be statistically valid—that the average annual cost for fuel for the average American car is around $700—$488 plus $886 divided by 2 equals $687, rounded off for purposes of this illustration to $700—then the annual fuel cost for a person making $25,000 per year represents about 3 percent of his salary, while it accounts for 10 percent of the salary of a person earning just $7,000 per year.

If the price of gasoline doubles in a few years, all other factors remaining the same, the average annual cost of $1,400 will represent about 5 percent of the $25,000 salary, or an increase of 2 percent, while it will represent 20 percent of the $7,000 salary, or a jump of 10 percent.

What all this means is that those in our society who can least afford it will be asked to bear a disproportionately severe burden of the high cost of energy conservation, with little or no return, while the rich will bear a disproportionately small burden with some or all of that cost returned through rebates and tax breaks. And the less one makes, the greater the burden. It is a classic case of a regressive tax.

Mr. Speaker, considering that the lowest 20 percent of American families receive a little more than 5 percent of all family income, while the top 5 percent receive almost 15 percent, it is clear that the President's proposed gas tax increase would contribute to a further polarization of American economic classes.

At the same time, it would severely reduce the purchasing power of lower and middle income families and impose a strain on their ability to obtain and keep steady, decent jobs. It would reduce the choices in lifestyle now enjoyed by all Americans, and further disadvantage those who are barely able to make ends meet.

COMMEMORATING THE LINDBERGH FLIGHT

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. AMBRO. Mr. Speaker, Lindbergh's triumph of 50 years ago can be seen today as an event with much subtler meaning than simply the first Atlantic crossing by a heavier-than-air craft. Joining as it did the technician and the individualistic dreamer, the crossing suggested a growing link between man's aspirations and his ability to attain those aspirations that has pushed our dreams far beyond the expectations of even a single generation ago.

Long Island's participation in that joining of the technologist and the dreamer is well established, whether the link be land, sea, or spaceborne. The excitement generated by the Lindbergh flight, a flight taking off from the Roosevelt Field airstrip on May 20, 1927, is still very much with those businessmen, scientists, and engineers who have pushed so far beyond Lindbergh-era technology in their defense and space work. Those same Long Islanders are even now entering into the difficult challenges faced by a society that must learn to fully mesh its industrial capability with environmental and social welfare considerations.

There can be no question that Charles Lindbergh would approve of this direction. A man who could simultaneously be at the forefront of his era's technological advance and still hold on to a deep spiritual sense would undoubtedly encourage the application of technology to the society's problems, a course he did in fact follow in his life.

And in reflecting on just what it is that makes it possible for the complex systems of modern technology to enhance the spirit, making possible even more optimistic dreams for the future, one can only look to the individuals who create not only the technology but the society it works in. The individual remains the key, whether it is the lone man in the airplane over the Atlantic or the first man to step on the Moon. And even as the technology broadens the dream, the dream makes possible the technology. Lindbergh's legacy is, in a very real way, his ability to span all elements of spirit and science. He showed the pathway to advancement for a society through the act of an individual.

BEWARE ELECTION FRAUD

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. TREEN. Mr. Speaker, one of the most far-reaching pieces of legislation which this Congress will consider is also one of the most potentially disastrous for the integrity of the election process. Congress will soon be taking up President Carter's legislative proposal to permit registration of voters on election day. The potential for fraud is substantial, as recognized by an internal Justice Department memorandum.

In order to maintain the integrity of the election process, it is essential that the means for committing fraud be detectable. In the October 2 Democrat primary in the First Congressional District of Louisiana, the extensive fraudulent voting that occurred in St. Bernard Parish could not have been detected had the procedures of President Carter's proposed legislation been in effect.

The situation in Louisiana was very ably analyzed by the Washington correspondent for the New Orleans Times-Picayune, Kenneth A. Weiss, in his "Washington Watch" which appeared in the May 8, 1977 edition of the Times-Picayune. Mr. Weiss' article follows:

CARTER VOTING PLAN "POTENTIAL FOR FRAUD"

(By Kenneth A. Weiss)

WASHINGTON.—Election fraud is nothing new in Louisiana. But a proposal by President Carter could make it commonplace nationwide.

A Justice Department memo describes Carter's proposed plan for election-day voter registration as creating a tremendous potential for fraud.

Under Carter's plan, voters would only have to go to polls on election day, show they live in the neighborhood, and vote—without the need for advance registration.

But a Justice Department memo on the plan says that pre-registration of at least 30 days is necessary to detect the common types of vote fraud.

The memo points out that the signatures made on voter registration cards were the principal basis of detecting vote fraud in the recent election fight between ex-Rep. Rick Tonry and James Moreau

Because those signatures were on file, investigators were able to pinpoint the forged votes that a state judge later ruled helped give Tonry his fraudulent victory in the Democartic primary runoff.

The Justice Department memo contends that the requirement under Carter's plan that persons seeking to vote without advance registration produce some kind of identification would be "essentially meaningless."

The official administration line is that making voters pre-register is an unnecessary and unfair barrier to many working persons who can't spare the time prior registration would take.

In reality, it's just politics as usual.

This past week, the House Administration Committee approved the Carter voter registration plan by a 17 to 8 vote.

All the Democrats voted for it, and all the Republicans voted against it.

The vote reflected the widespread belief that election-day voter registration would politically benefit the Democrats.

The administration contends that tough penalties for election fraud would prevent the illegal abuse of same-day voter registration.

However, the fact is there are already stringent laws on the books against election fraud.

Those laws didn't stop vote stealing in Louisiana's First Congressional District.

And those laws won't stop vote fraud in the future—as long as there are unscrupulous and desperate men willing to tamper with the very foundation of a democratic government.

Prior voter registration provides a check on the process—a safeguard against stolen democracy—and a means to track down those who would deny the peoples' will.

Without prior registration, it would have been impossible to prove election fraud in the Tonry-Moreau dispute.

It is true that election-day registration would make voting easier and more convenient for those whose busy lives makes it inconvenient for them to pre-register.

But the price of democracy is never cheap. And a small amount of inconvenience is a tiny price to pay to help protect the integrity of the elctoral process.

The recent sordid election fight in Louisiana was both an embarrassment to the state, and an outrage to its people.

If there is a lesson to be learned from the experience, it is that measures which threaten the security of the democratic process are a threat to the nation itself.

ARMED FORCES WEEK COMMITTEE

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. McDADE. Mr. Speaker, I would like to bring to the attention of my colleagues the meritorious efforts of the

Armed Forces Week Committee of Scranton, Pa.

The committee is comprised of community-minded citizens who are among the leaders of the northeastern Pennsylvania community. Military personnel, city, county, and State officials, educational leaders, service organizations, and the local chamber of commerce have all combined their talents and efforts to produce a week of activities to honor our Nation's Armed Forces. The scheduled events are all designed to demonstrate the manifold skills of today's servicemen and women and the important economic benefits provided to our area by the military.

I think it only fitting that we pay tribute to the committee for their efforts to bring to us a constant reminder of the selfless service of the members of the armed services, who have given so much to defend our democratic principles, and the continuing need for a strong defense force.

MEDICAL FREEDOM OF CHOICE BILL HITS 100 COSPONSORS

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. SYMMS. Mr. Speaker, for the past year and a half I have been promoting an idea that is now rapidly gaining the support of my fellow Members of Congress and of the outside community: the American Medical Association, the Association of American Physicians and Surgeons, and numerous individual physicians, economists, pharmacologists, and academicians.

The Food and Drug Administration was given a law in 1962, a law with the most honorable intentions, that greatly expanded their control over the research, development, testing and introduction of new drugs. Unfortunately, this law was passed in the midst of an emotional scare—the introduction of thalidomide in Europe. Thalidomide was dangerous in some instances, and the FDA deserves credit for preventing its introduction in America. The "safety" provisions of the 1938 Food, Drug, and Cosmetic Act worked very well and kept thalidomide from the vast majority of U.S. consumers. But the 1962 Kefauver-Harris amendments to the Food, Drug, and Cosmetic Act, given the impetus for passage as a result of thalidomide, did not deal with the safety of new drugs, but rather with the "effectiveness" of new drugs.

There is virtually no evidence to substantiate that the "effectiveness" provisions were needed in 1962. The 1962 amendments were a misguided, inappropriate congressional response to public outcry: the public exerted pressure and the Congress pased a law—a law that did not have anything to do with safety. The point is that the 1962 amendments were not needed in 1962 and they are not needed now. Fifteen years of experience with the 1962 amendments has given the medical community and the Congress ample time to evaluate the benefits and costs of the "effectiveness" provisions, and some very interesting figures come to light: in the pre-1962 decade, an annual average of 43 new chemical entities and 301 new drugs were introduced; the post-decade figures are 16 NCS's and 92 new drugs—the NCE figure is now somewhere around 13 per year; in 1962, the average drug could be developed, tested and be ready for market after 2 to 4 years, at a cost of $1 million and with as little as 1,000 pages of documentation; today, the average drug takes 7½ to 15 years to be tested, it costs $15–20 million—with one expert predicting a $40-million average by the end of this year, and requires up to 200,000 pages of documentation—naturally, submitted in triplicate. Since passage of the 1962 amendments, the entire drug flow has been cut by over 60 percent. Some FDA officials candidly admit that penicillin, aspirin, digitalis, and insulin—to mention but a few major drugs—would not be able to make it to the market under current regulations. Dr. Michael E. DeBakey, the world-famous cardiovascular surgeon, phrased it this way: "the prosthetic artery, aneurysmal patches and other vascular prostheses would not be here today if we would have had to comply 25 years ago with current FDA regulations." These ills can all be traced back to the 1962 "efficacy" provisions.

Moreover, there is little evidence—if any—that the 1962 effectiveness provisions have improved the quality of drugs on the American market. The 1975 Economic Report of the President states:

> It is not clear that the average efficacy of drugs introduced after 1962 is any higher than that of drugs previously introduced.

Prof. Sam Peltzman, University of Chicago Business School, states:

> The penalties imposed by the marketplace on sellers of ineffective drugs before 1962 seem to have been sufficient to have left little room for improvement by a regulatory agency.

Prof. Yale Brozen sums up the case very well in the foreword to "Drug Regulation and Innovation":

> The 1962 amendments to the Food, Drug and Cosmetic Act have caused more than a "drug lag" in the United States. There has also been a decline in drug innovation . . . it has been demonstrated that the incidence of ineffectiveness among new drugs was not lessened by the requirement imposed in 1962. . . . The sick are being deprived of effective treatment for some of their ailments. Drugs, some of which are drugs of choice, are available abroad but not here. The rate of pharmaceutical innovation has been depressed, further depriving those in need of effective treatment. . . . These are all "benefits" of the 1962 amendments which I, for one, am quite willing to do without.

Dr. Rita Campbell, Stanford University, concludes her analysis by saying:

> Repeal of the 1962 amendments would permit physician/patient to choose among relatively safe therapeutic options tailored to the patient's unique needs, would decrease the administrative costs of FDA, and would increase the net benefit to society.

After reviewing a great deal of material, I came to the same conclusion: The "effectiveness" provisions of the 1962 Amendments to the Food, Drug and Cosmetic Act should be repealed. I introduced legislation, titled "Medical Freedom of Choice," on March 16, 1976, and reintroduced the bill, H.R. 54, on January 4 of this year. The medical freedom of choice bill has now gained the cosponsorship of 100 Members and the support of many others.

In my efforts to help the American consumer by enacting much needed FDA reform, I have always tried to present factual, well-reasoned material to my colleagues. The Food, Drug and Cosmetic Act desperately needs revision, but the change must come about through a deliberate, logical and nonemotional process and not as a result of an emotional plea or scare as has happened so often in the past. The chief counsel of the Health and Environment Subcommittee in the House was recently quoted in a trade association newsletter as saying:

> Ten years ago nobody thought it could happen that the vitamin crazies would succeed in getting legislation passed to curb FDA's authority to regulate vitamins, "but the did . . ." [referring to the so-called Proxmire Vitamin bill that passed both the House and Senate nearly unanimously last year]. "The impact from respected scientists' intellectual arguments and the crazies' pressure may merge" [referring to the Medical Freedom of Choice bill].

I would hope that the pros and cons of this case will be able to avoid more of this type of argumentation. The medical freedom of choice bill is an important piece of legislation and needs to be given serious consideration.

Many people are concerned that this legislation is a pro-Laetrile or legalize Laetrile bill. I think my friend and colleague from Florida, Hon. PAUL G. ROGERS, chairman of the Health and Environment Subcommittee, has presented the best answer to this question in a statement in the April 1 issue of the Democratic Study Group Staff Bulletin:

> With respect to the specific issue of Laetrile or Vitamin B-17, it is my understanding that the Food and Drug Administration has not received a new drug application for Laetrile. In order to meet the current requirements for a new drug application the manufacturers of Laetrile will have to demonstrate that specific standards for safety and effectiveness have been met. Repeal of the efficacy provision would only alter this requirement with respect to effectiveness, the remainder of the existing requirements would still have to be met—and as I have mentioned there is no indication to date that the manufacturers plan on making such an attempt. In other words, repealing the efficacy clause will not automatically make Laetrile available in the United States.

The medical freedom of choice bill makes good sense in the proconsumer, regulatory reform atmosphere we find ourselves in, in Washington. I urge my colleagues to join with me by adding their name to the list of cosponsors on the bill. The present 100 cosponsors represent both political parties and virtually all political philosophies. H.R. 54 is a sincere, bipartisan attempt to reform Food and Drug Administration regulations and the issue needs to be resolved as quickly as possible .

The current list of cosponsors follows:

COSPONSORS OF THE MEDICAL FREEDOM OF CHOICE BILL IN THE 95TH CONGRESS

James Abdnor (D-SD), Joseph P. Addabbo (D-NY), Glenn M. Anderson (D-CA), Bill

Archer (R-TX), John M. Ashbrook (R-OH), Les AuCoin (D-OR), Robert E. Badham (R-CA), Robert E. Bauman (R-MD), Berkley Bedell (D-IA), Tom Bevill (D-OK), William S. Broomfield (R-MI), Clair W. Burgener (D-CA), J. Herbert Burke (R-FL), Elford A. Cederberg (R-MI).

Shirley Chisholm (D-NY), Del Clawson (R-CA), James C. Cleveland (R-NH), Thad Cochran (R-MS), William S. Cohen (R-ME), James M. Collins (R-TX), Tom Corcoran (R-IL), Philip M. Crane (R-IL), Dan Daniel (D-VA), Samuel L. Devine (R-OH), William L. Dickinson (R-AL), Robert K. Dornan (R-CA), Thomas J. Downey (D-NY), John J. Duncan (R-TN), Mickey Edwards (R-OK), Allen E. Ertel (D-PA), Paul Findley (R-IL), Walter Flowers (D-AL), Richard A. Gephardt (D-MO), Barry M. Goldwater, Jr. (R-CA).

William F. Goodling (R-PA), Tennyson Guyer (R-OH), Tom Hagedorn (R-MN), Sam B. Hall (D-TX), John Paul Hammerschmidt (R-AR), George Hansen (R-ID), Marjorie S. Holt (R-MD), William J. Hughes (D-NJ), Richard H. Ichord (D-MO), James M. Jeffords (R-VT), James R. Jones (D-OK), Richard Kelly (R-FL), Jack F. Kemp (R-NY), William M. Ketchum (R-CA), Thomas N. Kindness (R-OH), Robert Krueger (D-TX).

John J. LaFalce (D-NY), Robert J. Lagomarsino (R-CA), William Lehman (D-FL), Norman F. Lent (R-NY), Jim Lloyd (D-CA), Trent Lott (R-MS), Robert McClory (R-IL), Paul N. McCloskey (R-CA), Larry McDonald (D-GA), Dan Marriott (R-UT), James G. Martin (R-NC), Clarence E. Miller (R-OH), George Miller (D-CA), G. V. Sonny Montgomery (D-MS), Carlos J. Moorhead (R-CA), Bill Nichols (D-AL), George M. O'Brien (R-IL), Jerry M. Patterson (D-CA).

Edward W. Pattison (D-NY), Melvin Price (D-IL), Joel Pritchard (R-WA), Dan Quayle (R-IN), Charles B. Rangel (D-NY), Matthew J. Rinaldo (R-NJ), Charles Rose (D-NC), John H. Rousselot (R-CA), Eldon Rudd (R-AZ), Philip E. Ruppe (R-MI), Leo J. Ryan (D-CA), Jim Santini (D-NV), Harold S. Sawyer (R-MI), Keith G. Sebelius (R-KS), Robert L. Sikes (D-FL), Paul Simon (D-IL), Bernie F. Sisk (D-CA), Gene Snyder (R-KY).

Gene Taylor (R-MO), Charles Thone (R-NE), David C. Treen (R-LA), Guy Vander Jagt (R-MI), Joe D. Waggonner, Jr. (D-LA), Robert S. Walker (R-PA), William G. Whitehurst (R-VA), Bob Wilson (R-CA), Charles Wilson (D-TX), Charles H. Wilson (D-CA), Antonio Borja Won Pat (D-GUAM), Gus Yatron (D-PA), Don Young (R-AK), Leo C. Zeferetti (D-NY).

PERSONAL FINANCIAL STATEMENT OF HON. JOHN CONYERS, JR., FOR 1976

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. CONYERS. Mr. Speaker, as a cosponsor of the Financial Disclosure Act—H.R. 1—which would require all candidates for Federal office, Congresspeople and Federal employees to reveal on an annual basis the amount and sources of their income, and as a supporter of House Resolution 287 to amend the financial ethics code in the House of Representatives, and in keeping with my conviction that all public officials should routinely disclose their personal finances to constituents, I am once again making such a disclosure. The following is a statement of my finances for the year 1976:

My income for the year consisted of my congressional salary of $44,600, income from my ownership in the Conyers partnership—automobile dealership—of $1,124, speaking honoraria amounting to $13,142.81, and interest income of $138.40. My total income was $55,018.35 and my adjusted gross income was $52,999.73. I paid Federal income tax in the amount of $17,509.38, Michigan State tax of $1,880.67, and Detroit city tax of $1,102.48.

"CAPITALISTIC PIGS" CHEER FOR CASTRO

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. CRANE. Mr. Speaker, early last week, the Senate Foreign Relations Committee voted to lift part of the 15-year U.S. trade embargo against Cuba in what seems to be only the beginning of a drive to embrace the Communist satellite and shower it with concessions, dispensations, and investments. American businessmen and politicians have seemingly forgotten that in 1959 the Cuban Government seized virtually all the private property owned by U.S. nationals, property valued at approximately $2 billion. Since no compensation was made by Cuba for the expropriated property, I suppose that the businessmen who visited Havana earlier this month will just forget about the property and simply give it to Cuba as a sign of American "good will," just as long as the businesses get a corner of the Cuban market. I would like to share with my colleagues an article by Mr. Patrick Buchanan from the Chicago Tribune, which contains some thought provoking comments, in light of recent Senate action:

"CAPITALISTIC PIGS" CHEER FOR CASTRO

(By Patrick J. Buchanan)

WASHINGTON—Now that Cuban officials have conceded their economy is a basket case, a curious coalition of Americans is galloping to the rescue. Led by Sen. McGovern [D., S.D.], who last week introduced legislation to partially lift the United States embargo, the coalition consists of peachy, pietistic liberals and profit-hungry capitalists.

Kirby Jones, former press aide to McGovern, who serves as "consultant" for U.S. businessmen anxious for a piece of the Cuban action, said last week:

"The amount of trade is limited but somebody's going to get their [the Cubans'] business. If there's a market, Americans want a part of it . . . I don't see how the government can continue to resist the pressure from the business community."

Maybe not, Kirby, but then there always was an element of truth in that Leninist term of contempt, "capitalist pig." Also, a question here arises. Is there not a conflict of interest, with McGovern pushing legislation which will initiate trade from which McGovern's protege is sure to rip off a fat broker's fee?

But back for a moment to the American businessmen, 52 of whom came from such giant Minnesota firms as Honeywell, Control Data, Pillsbury, and General Mills, visited Havana a week ago. One report had it the boys gave Castro a standing ovation. Another, from Wall Street Journal correspondent Robert Keatley described the U.S. performance thus:

"The Castro charm seemed to work once again with these visiting Americans, as it so often does. The group was respectful, almost reverent at times, which is frequently the case when conservative U.S. executives meet famous Communist officials. They asked no difficult questions . . ."

From the U.S. standpoint, a lifting of the embargo, even partially, could not come at a worse time. The embargo is working beautifully. Writes Keatley: ". . . the average Cuban now can only get one ounce of coffee per week, 12 ounces of meat every 10 days, and one pair of trousers annually." Jack Kennedy's economic blockade has, literally, de-pantsed Castro's economy.

We should tighten the screws, and turn the misery of the Cuban people into animosity against the "corrupt and repressive" regime that reduced that once-prosperous island to penury.

Other reasons exist for not moving to relieve Castro. As a recent headline in New York City's second largest morning paper reported—following Fidel's visit to Moscow—"Soviet Union and Cuba Promise More Aid for Guerrilla Groups." Writes the former U.S. ambassador to Yugoslavia, Laurence H. Silberman: "To seriously bargain now for recognition while thousands of Cuban troops are in southern Africa is not only to ratify past Cuban policy; it is an unnecessary confession of our weakness."

And what is the character of the regime with which McGovern, champion of "human rights" in Chile, seeks closer economic ties? Here is the testimony of an American black, Garland Grant, a one-time Panther sympathizer, who hi-jacked an airliner to Cuba years ago:

"I've been in this place for six years and I'm out of my mind. Believe me, I'm all for the United States now. I'd even wear a Nixon button. . . . I'm probably being watched Everybody here is too scared to say anything. . . . They can't do anything more to me than they've already done, but put a bullet in my head. I'm living like a dog in Cuba."

Contributing to Grant's disillusionment may have been the 30-month prison term he served for showing "disrespect for personnel of the Swiss Embassy." During one of those jail terms, Grant went on a hunger strike and was beaten so badly he lost an eye and carries permanent body scars. Another American, says Grant, was murdered by Cuban guards when his "head was bashed against a wall."

Warned he would face a prison sentence if he came home, Grant told the correspondent, "Just open my cell door and I'll walk in." That is, for one American black, prison in the U.S. is preferable to "freedom" in Communist Cuba.

My own feeling is that this whole rotten business offers the GOP an opportunity. Too long tied to, and associated with Big Business, the GOP caucus should adopt a resolution of contempt for those businessmen anxious to bail out Castro; they should also vote, in unanimity, against McGovern's proposal. Finally, they might steal a bit of Carter's "human rights" thunder by adding to the new funds for Radio Liberty and Radio Free Europe, millions for Radio Free Cuba.

PREVENTING POSTAL FRAUD

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. GILMAN. Mr. Speaker, I recently introduced H.R. 6073, to protect unwary consumers from unscrupulous promoters of products and services who engage in misrepresentation and the fraudulent use of the mail.

This bill: First, provides civil penalties of not more than $10,000 for each violation after a promoter has been advised by the Postal Service to cease promotion of goods and services alleged to be deceptive; and, second, empowers the Postal Service—if such deceptive promotion continues—to seek recovery of a consumer's money or property.

Since introducing this bill, a number of my colleagues have indicated their desire to cosponsor this important piece of legislation.

Mr. Speaker, I welcome the support of my colleagues and list the following Members who have joined me in urging passage of this bill:

LIST OF COSPONSORS

Mr. Addabbo, Mr. Badillo, Mrs. Collins of Illinois, Mr. Derwinski, Mr. Drinan, Mr. Ertel, Mr. Fauntroy, Mr. Harrington, Mr. Kostmayer, Mr. Mitchell of Maryland, Mr. Murphy of Pennsylvania, Mr. Neal, Mr. Richmond, Mrs. Spellman, Mr. Stark, Mr. Stokes, Mr. Simon, Mr. Waxman.

A REALISTIC LOOK AT ENERGY DEVELOPMENT

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. RONCALIO. Mr. Speaker, Gillette, Wyo., is one of the best known boomtowns. Extensive studies have been conducted about this community sitting on the world's largest coal deposit. Without any help from the Federal Government, the city and State of Wyoming have cooperated in their struggle to cope with the many problems associated with rapid, unplanned growth. There is still a water shortage, housing shortage, inadequate sewage treatment, and lack of recreational facilities.

Although reaping many benefits from this area, the Federal Government has virtually disregarded the problems with the exception of studying them. The resources will continue to grow in importance to the Nation. I would hope a knowledge of these unwanted side effects of energy development would result in meaningful Federal assistance. The following article by the mayor of Gillette, Michael Enzi, is a sad commentary on the bumbling of the Federal Government on impacted communities.

I commend him for being a lucid writer as well as a great mayor.

The article follows:

[From the Los Angeles Times, May 15, 1977]

WYOMING'S COAL VEINS JUST BRING TROUBLES

(By Michael B. Enzi)

We've known for years that Gillette was sitting on top of the single largest coal deposit in the world—a strip of coal 150 feet deep at some points, 80 miles long and from 20 to 30 miles wide.

If the United States had no coal except the coal in Campbell County, Wyo.—where Gillette is the only incorporated town—it would still be the fourth-largest coal-producing country (instead of the first). Only Russia, China and West Germany have larger coal deposits than Campbell County. To put it another way, the Bureau of Land Management says that the county has 12% of the known coal reserves in the world. And some of it is so close to the surface that we have trouble digging sanitary landfills in Gillette to bury our garbage—we keep striking coal.

Despite the impressive statistics, nobody got very excited about our coal until the energy crisis. There was far more interest when oil was discovered near Gillette in 1967; for a time the town became the center of one of the top oil-producing areas in the country. Although new wells are still being discovered, oil production has leveled off since 1971 and is responsible for only a small increase in the population—and troubles—of Gillette.

Yes, we have troubles. The energy crisis made it obvious that the United States would be forced to return to coal as a primary source of fuel as petroleum supplies ran out. It was also apparent that the easiest and least expensive way to increase coal production was to turn west, where vast supplies lie close to the surface and can be strip-mined. It means the creation of instant boom towns.

Less than a decade ago, at the time of the first big oil strike, Gillette was a ranching community of 3,500 people who exchanged tough winters for glorious summers in a corner of northeastern Wyoming so remote that they had to drive 135 miles to Casper for any excitement.

Today we have a population of 10,000 which is expected to double in the next three years, with a projection for 35,000 by 1985. And we have excitement at last, if you count coal trains rumbling through the town day and night, cutting it in two; a water shortage, a housing shortage, a race with time to secure adequate sewage-treatment facilities, a severe shortage of recreation facilities and even a shortage of accurate information on which to base future planning.

Oh, and we have a money shortage, too.

The City Council has set some priorities and is trying to handle one maior problem each year while beating out brushfires which come up in other areas. This is the year to concentrate on water, and in recent months we have dug new wells and increased our water supply by 45%. Last August we let bids to triple our water-storage capacity. We're looking for other additional water supplies to take care of the continually increasing population. It's going to cost somewhere between $17 and $30 million, and we've been forced to raise the water investment fee, which is like a membership for water users, from $250 to $950 plus costs. That means a water connection for a new house or business costs almost $1,000.

Housing has us almost in despair: In the past 13 years, 300 houses have been built in Gillette. A recent economic base study showed that we should be building 1,500 houses a year—in other words, one out of every thousand new houses in the United States should be built in Gillette, Wyo. Housing developers haven't been flocking here, however, because they weren't sure the coal boom was real. As a consequence, the housing market is very tight. Many of the new workers—who have caused the average age in town to drop to 25—are just getting started in their first jobs and can only afford mobile homes, for which easy financing is available.

We don't have any facilities for large numbers of mobile homes, so quite an encampment has grown up at our local fishing lake and playground. It has only two restrooms—no showers, water supplies or laundry facilities—and therefore we asked the Department of Housing and Urban Development for a grant to build a mobile-home village. I don't think they read our application, however, because when they turned us down they said Gillette didn't need another playground.

It has been equally frustrating trying to get federal help to expand our sewage-treatment facilities, which are at capacity. The Environmental Protection Agency rejected a request for help, saying that Gillette already had a treatment plant and must wait until 27 other towns in Wyoming got their first ones.

The Economic Development Agency turned us down because expanded facilities would encourage growth and therefore create adverse conditions. Encourage growth? We've already got growth and adverse conditions!

If the federal government has been stingy with its money, it has been generous about sending experts here to Gillette to study us. City employes and officials spend endless hours being interviewed by researchers, who arrive in teams and listen carefully as we explain our problems. A few months or even a few years later we receive copies of their reports, which say just what we told them. But this process doesn't give us any new information or help, nor are we ever asked to help design studies which would help.

When the federal government requires environmental impact statements, why doesn't it find out how municipalities are affected by such developments as the coal boom? It is hard to get Gillette people worried about the life span of the antelope when they are on water rationing.

Many times I've asked the researchers from Washington to get us some help in the form of grants, but they come back saying, "You know, you're right, you're not eligible for anything." It's because we're in an economic situation which is out of step with the rest of the nation. The government is set up to stop deterioration with urban renewal programs, for example, not to cope with growth.

If we can't count on the federal government for much help, where can we turn? We haven't been sitting around just wringing our hands. For one thing, the city of Gillette and Campbell County probably have the best city-county cooperation in the state. The city's property tax is at the maximum rate allowed by law, and raises about $100,000 a year. Most of the companies moving to the area are outside the city limits, so the county gets their tax revenue. The county builds and maintains the roads going to all the new mines, and so forth, but it also operates the recreation center, library and hospital, all of which are in Gillette. The county gave us the land for a new water-storage facility and the site for a new well.

A $9 million county bond issue to build a new hospital was passed recently. We're working now to transfer the airport to county jurisdiction—major carriers probably will be flying in here by 1980 and airport improvement is expected to cost about $6 million.

We're hoping the railroad will do something about the tracks which cut Gillette in half. There's constant traffic now with coal, and emergency vehicles have no way to get through when a train is passing. We need to divert the traffic or at least to build an overpass. Railroads are becoming quite an issue in Wyoming. For the first time since World War II new tracks are being built.

Despite all the problems, I'm optimistic. The newcomers have a good spirit and the old-timers accept the fact that growth is inevitable. In a town like Gilette it's easy to see what needs to be done and relatively easy to get it done.

TOM HULETT AND CONCERT'S WEST

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. DUNCAN of Tennessee. Mr. Speaker, I would like to bring to the attention of the Congress today the appre-

ication of my fellow Tennesseans for Mr. Tom Hulett, who has brought the finest in entertainment productions to the citizens of Tennessee.

Tom Hulett is the managing general partner of Concert's West, the prime promoter of another fellow Tennessean, Elvis Presley.

Today with our young people so greatly influenced by what they see on the stage, it is refreshing to see a well produced, class show, as is presented by Mr. Hulett and Concert's West.

Thanks to Mr. Hulett and entertainers like Elvis, young people receive the impression that class and quality are still worthwhile ideals in our free enterprise marketplace.

Concert's West and Tom Hulett are approaching their 10th anniversary in providing quality entertainment from the west to the east coast. The positive influence they have had on our young people is worthy of recognition from this body.

Thanks to Concert's West, Tom Hulett and Elvis we can be sure that high standards in the entertainment industry will continue to be set by these gentlemen.

WHY CONGRESS HAS NOT DEREGULATED NATURAL GAS

HON. BOB GAMMAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. GAMMAGE. Mr. Speaker, President Carter, in a speech delivered to a joint session of Congress on April 20, 1977, outlined his comprehensive national energy policy. While I personally appreciate the President providing the Congress a comprehensive energy package with which to work, I am distressed over his proposed treatment of new natural gas.

The President proposes to subject all new natural gas, sold anywhere in this Nation, to a price limitation of the Btu equivalent of the average refiner acquisition cost—before tax—of all domestic crude oil. The price limitations would be $1.75 per Mcf, and the distinction between interstate and intrastate natural gas would be erased.

My view is that this policy will not be conducive to increasing the supply of natural gas to consumers. The small increase in the wellhead price of natural gas, from $1.44 per Mcf to $1.75 per Mcf, will result in natural gas producers continuing to drill 90 percent of their wells in low-cost drilling areas, where only 30 percent of the potential undiscovered resources are thought to be.

It is my earnest opinion that the only way to assure the necessary volumes of natural gas to all users is to decontrol the wellhead price of natural gas. A market-derived wellhead price of natural gas will both encourage conservation by consumers, and provide the capital incentives necessary to encourage producers to step up exploration and production from the high-cost frontier areas.

Therefore, I urge my colleagues to read a compelling article, by my friend Representative BOB KRUEGER, Democrat of Texas, which appeared in Nation's Business, entitled "Why Congress Hasn't Deregulated Natural Gas." Representative KRUEGER's article, coupled with this winter's severe natural gas shortage, sets forth the dire necessity to deregulate the wellhead price of new natural gas.

[From Nation's Business, April 1977]

WHY CONGRESS HASN'T DEREGULATED NATURAL GAS

(By Rep. BOB KRUEGER)

(NOTE.—Rep. Krueger (D.-Texas) was a freshman member of Congress when he assumed a leadership role last year in efforts to remove federal price controls from the wellhead prices of natural gas. He and others supporting that action view deregulation as a necessary first step to stimulate production of new gas supplies. In this article, he gives an inside view of how the deregulation issue was approached in the 94th Congress and what is likely to happen in the 95th Congress this year.)

The energy crisis of this past winter brought grim news from industrial communities large and small.

Production dropped sharply. Unemployment was up. Schools were closed. The entire national economy suffered.

FEDERAL "PROTECTION"

During the height of that crisis I was approached on the House floor by a representative from a Northern industrial state that was among the hardest hit. He and every other Democratic member of his delegation had opposed my bill to remove federal price controls from natural gas.

They had considered themselves to be "protected" by beneficient federal regulation, and some had questioned whether federal price regulation discouraged production or caused shortages.

However, the representative who approached me said only:

"Bob, if you can bring your deregulation bill back to the floor, I believe I can get our entire delegation to vote for it."

Many other representatives who had championed price-controlled gas underwent a similar change of heart due to the winter's dislocations.

To understand why they changed their minds it may be helpful to review the struggle over natural gas deregulation legislation that took place in the winter of 1975–76, and to assess some of the public attitudes that lie behind congressional politics and policies.

General public attitudes on energy are translated in Washington into political action or inaction. If the American people do not believe that we face real energy shortages, their elected representatives will not vote for the difficult measures needed to address these shortages.

LEGISLATING DISCIPLINE

And basically, the American people do not believe in energy shortages, or, indeed, in any shortages at all that cannot be quickly and easily relieved.

In a society in which people are accustomed to being able to gratify most desires quickly and easily, it is difficult to legislate the realities of finite supply, delayed gratification, and the discipline required to plan and implement long-range policy.

Since any congressman has that most basic instinct of all animals and humans—the instinct for survival—he will tend to vote in a way that will be easiest to explain in the next election. Since a House member's reelection is always less than two years away, it is sometimes hard to vote for policies that bring short-term pain even if they bring long-term benefit.

DEFYING REALITY

It was already apparent in 1975 that America faced a serious shortage of natural gas.

Many Americans, however, did not believe this. And many congressmen, therefore, stated that they did not believe it either.

"The gas shortage has been overstated dramatically by deregulation advocates," said a Michigan congressman. A New York representative declared there was "substantial evidence that the industry-proclaimed shortage will not occur."

Such statements were made in the face of official government figures showing that, for the previous ten years, the country had been using natural gas twice as fast as the gas was being replaced.

Demand had soared because of industrial expansion, federal controls on the wellhead price of natural gas shipped in interstate commerce, and the environmental appeal of this clean-burning fuel.

Today, despite the difficulties of the past winter, claims that the natural-gas shortage is imaginary or contrived continue to be made. Conflicts over natural-gas policy persist.

Producing states tend to be pitted against consuming states; the North is against the South; advocates of a free market oppose so-called consumer protectionists; liberals differ with conservatives and Republicans with Democrats.

TEMPORARY REMEDY

All these forces came into play as we entered the winter of 1975–76 and prepared for a gas shortage in states supposedly protected by price controls. In order to make more gas available to those states, an emergency six-month deregulation bill was introduced by Rep. John D. Dingell (D.-Mich.), chairman of the House Commerce Committee's Energy and Power Subcommittee. Under the Dingell bill, distressed interstate pipelines would be allowed to buy surplus gas from the intrastate system at market prices.

A coalition of major users of natural gas, producers, and pipeline companies foresaw much larger problems with natural-gas supply, however, and sought legislation to abolish federal price controls on new gas sold interstate. In response, the Senate in mid-1975 passed the Pearson-Bentsen bill allowing immediate deregulation of new onshore gas and a phased, five-year deregulation of offshore gas from federal lands, all of which is sold in interstate commerce.

The Senate took this long-term action by a margin of almost two to one.

The House, however, approached the question with less alacrity. Rep. Dingell and others wished to confine subcommittee consideration to a temporary approach. Some of us disagreed and thought it time to address the long-term question. After all, the matter had been bottled up in committee for 20 years, since Congress had passed gas deregulation legislation that subsequently was vetoed by President Eisenhower.

Legislation in the House, unlike that in the Senate, is governed by strict rules of germaneness. Rep. Dingell's short-term bill initially amended the Natural Gas Act and therefore could have been amended itself to provide long-term deregulation. Mr. Dingell, an able parliamentarian who realized that the committee might consider deregulation in spite of his wishes, then drafted a new bill to accomplish the same ends without amending the Natural Gas Act. Any long-term deregulation bill that amended the Natural Gas Act thereby became nongermane and out of order.

LOST ON A TIE

When the matter went before the full House Commerce Committee, with its somewhat broader geographical representation, I introduced an amendment that simply

changed from six months to seven years the period under which emergency purchases were allowed at market prices. I lost on a tie vote of 19–19. Nonetheless, strength for the concept of deregulation was evident in the committee. Recognizing that such strength might also be present in the full House, the committee leadership was not eager to move the Dingell bill quickly. The process of bringing the bill to a vote slowed down.

Finally, the committee approved the short-term bill in November, 1975, and sought to bring it to the floor immediately under a procedure that would have prevented me from offering my amendment. That move failed because of opposition from Carl Albert, who then was Speaker of the House. He insisted that the bill go through the Rules Committee, which is the clearinghouse for legislation from all other committees.

Despite strenuous objections from the Commerce Committee leadership, the Rules Committee on Dec. 16 granted permission for House consideration of the Commerce Committee bill under terms allowing me to introduce my deregulation amendment.

DELAYED UNTIL NEXT SESSION

At that point the Commerce Committee leadership was no longer interested in prompt action, and the issue carried over into the 1976 congressional session.

Over Christmas recess and into January, groups interested in natural-gas supply intensified efforts to win deregulation. In January I met with representatives of 22 agricultural groups that supported my legislation because of the importance of natural gas to the production of fertilizer.

I also met with representatives of petrochemical energy users; of the iron, steel, and aluminum industries; of the wood-pulp and paper-products industries; of textile groups; and of gas producers and pipelines. All these people, in turn, contacted their industry members in congressional districts throughout the land. Those users, in turn, wrote and contacted their congressmen asking support for my deregulation bill.

Meanwhile, of course, forces on the other side were preparing for the battle by asking congressmen to oppose the legislation. Labor unions, which had never been very successful in organizing the oil and gas industry, were opposed to deregulation. Consumer groups shortsightedly feared the price impact of deregulation more than they did shortages.

Thus the sides were drawn for what was to be the largest legislative battle in the House in 1976. Chairman Dingell, opposed to deregulation and unhappy that the legislation was to be considered by the full House, called still more hearings to consider the impact of deregulation. One witness was movie actor Paul Newman—show biz had come to Washington.

STILL MORE HEARINGS

Speaker Albert allowed the time for further hearings even though the matter had been discussed for 20 years and Congress had already taken volumes of testimony. An extraordinarily irresponsible study was elicited from the Congressional Research Service of the Library of Congress by antideregulation forces. The study's scholarship was so faulty that the cost of natural gas at the wellhead was confused with the price of natural gas delivered to consumers, which is similar to confusing the price of wheat with the cost of a loaf of bread.

Finally, Speaker Albert indicated that he planned to bring the matter to the floor the first week in February, and Mr. Dingell asked me to meet with him in the Speaker's office on Jan. 30.

SENIORITY VERSUS A FRESHMAN

I arrived there to find not only Mr. Dingell and Mr. Albert, but the chairman of the full Commerce Committee and all six subcommittee chairmen. All but one were opposed to deregulation. Initially, those who opposed deregulation insisted that their own bill had been improperly referred to the Rules Committee and that they required more time for hearings. Speaker Albert told them: "I gave Bob Krueger my word that we would bring it up on Monday; it's up to him."

At that point six of the seven chairmen turned to me, and 150 years of combined seniority came to bear on a first-term freshman.

The chairmen indicated that they wanted only a few more weeks, or perhaps months, in which to hold hearings. They wished to study the matter further. They knew that I wanted to be fair with them, for they knew that I looked forward to a long future in the House and that I would wish to work again with them in the future. It was their concern for my future that made them emphasize the importance of my playing fairly with them now. If I could give them only slightly more time, they would bring out the bill.

I was deeply moved by their compassionate concern for my future. But I also recognized that timing is important in politics. The House had not had the opportunity to consider deregulation for 20 years. I asked if they would guarantee a date in the spring when the matter would be on the floor. They refused. With that, my choice was clear: The matter would come to the House next week.

As the week began, the hallways outside the entrance to the House chamber were filled with union members who had been brought in from all parts of the country to lobby against deregulation. Meanwhile, representatives from user industries and agricultural groups moved about the House office buildings seeking support for deregulation.

STACKED RULES

For three days the battle raged. The arguments could have been anticipated: One side argued that there was no shortage and that a deregulation bill would be a ripoff of consumers. The other side argued that only by allowing the marketplace to work could the shortage ever be eased and conservation achieved.

The rules of the game were stacked against deregulation, however. Mr. Dingell, floor manager for his own bill, had a staff of eight attorneys and committee assistants seated next to him.

One of their assignments was to look after 200 highly technical, proposed amendments to the measure that had been prepared for submission. I was not allowed to have even a staff member of my own on the floor, nor to have a committee staff member sit by me to offer advice. When I asked why not, I was told: "It's the seniority system."

The vote was not expected to come until the following week, but on Thursday afternoon a signal came from a United Auto Workers official who was the outside coordinator for the antideregulation forces. He had observed that a number of representatives had already left to spend the weekend in their districts, and he suggested that a hastily prepared compromise bill, introduced the night before, should be brought to a vote immediately.

This bill ostensibly would have deregulated independent producers. Actually, by regulating major producers of gas in both interstate and intrastate markets, it would have resulted in bringing more, rather than less, gas under federal regulation. Nonetheless, the bill was sold as a compromise deregulation measure to members who had had no opportunity to discuss or study it. I doubt that more than five members on the floor that Feb. 5 understood the nature of the bill.

It is a political truism that, on a particularly divisive issue, members will flock to a compromise when worried about the potential unpopularity of their votes.

As the vote began, each side rallied its forces. Fifteen minutes are allowed for a recorded vote in the House, and the clock counts down the time remaining in which members may vote, while the yeas and nays are recorded electronically.

When the clock ran out, the vote was 196–196. With a tie, the compromise would fail. However, voting was held open as stragglers made it to the chamber, and a few people were talked into switching their votes. When the gavel fell, the tally was 205–201 in favor of the compromise and against the genuine deregulation bill.

Hopes for deregulation in 1976 ended at that point. The House and Senate were stalemated. A conference to try to reconcile the two widely disparate bills would have been a waste of time and was never begun.

One result of all that maneuvering was the closed factories of the winter of 1976–77.

The question is: Will House action on natural gas in 1977 be a rerun of 1976? I think not. The comment from my Northern colleague, mentioned earlier, indicates significant change.

A COMPLEX PROBLEM

While deregulation of natural gas is our best solution, it is not a panacea.

One issue to be resolved is the situation of producing-state consumers who have long been paying market prices for natural gas while the consumers in other states have been getting gas from the same wells at a much lower price. The producing states are concerned about appropriate protection against having their own supplies bid away from them by the very people who have been underpaying them for their products.

In addition, it takes several years to bring new gas on stream after an initial decision is made to seek land for exploration, drill exploratory wells, map out the field, and bring in the production lines. Thus, shortages will persist for several years. None of this is particularly easy, but people should not enter public office if they are simply looking for easy decisions.

The country needs gas. I believe deregulation is an idea whose time came years ago. I expect to see deregulation legislation reach the President's desk in 1977.

How Some Companies Are Coping With the Energy Crunch

American business firms have shown great ingenuity in coping with the nation's energy crisis.

Often their task has been complicated by what government has done.

Environmental regulations have forced some firms to switch from one fuel to another at great cost. Other companies have converted to new sources of energy only to find supplies dried up by government regulations.

Here, in brief, are what some companies have done to survive and thrive in this new energy era.

RETURNING TO COAL

When winter's worst blizzard howled into Ohio in January, SIFCO Industries, Inc., was hard hit.

On Jan. 17 SIFCO's supplier of natural gas cut deliveries to a bare minimum. In Ohio, as in much of the East, there was barely enough of this fuel to heat homes.

"We were put on minimum maintenance," says SIFCO President Kevin O'Donnell. "About enough to keep our plant from freezing. We had no gas for our drop-forges or our forging material."

The Cleveland maker of turbine blades, jet engine parts, and other custom forgings had to shut down its shop for three and a half weeks. Three hundred and fifty employees were thrown out of work.

Not until Feb. 9 did the company get enough natural gas to resume operations.

Yet SIFCO is the kind of smart, sophisticated company that is seldom caught short.

It plans ahead.

Back in 1967 rigorous environmental controls were still a distant threat to industry. Nevertheless, SIFCO saw warning signals.

"We recognized that government regulations would be hard to meet with coal," President O'Donnell says. "At the same time, natural gas distributors were looking for customers."

By 1968 SIFCO had switched from coal to pollution-free natural gas.

In case of emergency, SIFCO's boilers were equipped to burn fuel oil also. Thus the company could still operate with a 60-percent cutback in its supply of natural gas.

It could not, however, operate with almost none.

Now the company is taking steps to avoid a second energy crunch.

SIFCO has bought the output of three Ohio natural gas wells and is starting its own drilling program.

However, the company expects to be able to meet only a small fraction of its energy needs from these sources.

"Now we are being told by some people that we had better switch our boilers back to coal because fuel oil will be difficult to get," Chairman Charles J. Smith, Jr., says, "I don't know how much it will cost, but it has to be a couple of million dollars."

SWITCHING TO COAL

"Remember when people called natural gas our cheapest, most abundant fuel?" Roland R. Speers, president of Amcord, Inc., asks.

"We gambled $9.5 million that they were wrong."

Amcord spent that sum early in 1973 to convert two cement plants in California and one in Arizona from natural gas to coal.

For its $9.5 million, the company got at each of the plants:

A railroad marshaling yard able to handle a 100-car unit train, unload it, and have it back on the main track in four hours flat.

Storage bins, conveyor equipment, and grinding mills that prepare the coal to burn in the kilns.

"When we made this decision," Mr. Speers says, "I spent a lot of sleepless nights.

"The cost was considerable. And when I looked around, no one else was doing what we were doing. My God, I thought, am I out on a limb all by myself?"

Amcord was banking on a growing scarcity of energy, especially natural gas, and higher prices.

"In the fall of 1973 the Arabs made us look good," Mr. Speers says.

Cement-making takes a lot of fuel. Per $1 of sales, the Federal Energy Administration says, the industry ranks as the No. 1 user of BTU's—mostly natural gas.

Amcord, sales $200 million, led a move to coal among cement-makers.

DRILLING FOR GAS CLOSE TO HOME

Miller Brewing Co.'s new, four-million barrel brewery near Auburn, N.Y., burns 6.3 million gallons of fuel oil a year. Miller would prefer natural gas, but it is not available.

Federal price controls partly explain why. Less natural gas is being sent north via pipeline from the rich gas fields of Louisiana and the Southwest.

Once shipped across a state line, natural gas normally is subject to a ceiling price set by Washington. So a bigger percentage of gas stays in the state where it is found. There the market, not a federal bureau, decides what the fuel is worth.

However, Miller is solving its natural gas problem.

The Milwaukee-based brewer has taken out mineral leases on 15,000 acres near Auburn.

"We know gas is there," a company spokesman says.

Miller is spending $20 million to drill wells and build a pipeline to carry the natural gas to its brewery and a companion canning plant.

Small amounts of natural gas have been produced in New York State since the 1880's. With Southwest gas cheap and once abundant, investors lacked incentive to drill for it locally.

"The gas we get here will cost about $1.20 per thousand cubic feet," a Miller spokesman says. "That will be expensive compared to the price-controlled gas from the Southwest.

"Yet it will still be cheaper than alternative fuels—and we will have it."

TRYING OUT SOLAR ENERGY

In sunny Sacramento, an energy source of the future is already at work.

Campbell Soup Co. has its big West Coast canning plant in the California city. One of the plant's 20 production lines is hooked up to solar energy.

On the roof of the building, 7,578 square feet of heat collectors gather energy from the sun. The system supplies 74 percent of the energy needed to bring water up to the sterilizing temperature of nearly 200 degrees.

The solar equipment was designed and installed by Acurex Corp., Mountain View, Calif. The federal Energy Research and Development Administration finances the $500,000 experimental installation.

"The system will provide the Campbell plant with 2.1 billion BTU's a year," Acurex executive Robert Mawhinney says.

"That energy will cost about $7 per million BTU's. That is not much more than electricity costs here—$6 per million BTU's. And, in California, electricity is cheap. The state has lots of inexpensive hydroelectric power."

Campbell expects its solar energy installation to be out of the experimental stage and on a regular production basis by fall.

IN HONOR OF DR. FRANK W. KITTINGER

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. ROUSSELOT. Mr. Speaker, after nearly 30 years of distinguished service to countless appreciative students and parents of Charter Oak, Calif., Dr. Frank W. Kittinger is retiring this year from his position as superintendent of the Charter Oak Unified School District.

Dr. Kittinger's contributions to the Charter Oak Unified District are significant. He started as a seventh grade teacher in the district in 1948. His talent was soon recognized and he was promoted to teaching vice principal in 1949, principal in 1950, and finally superintendent in 1951. When the district was unified in 1960 he became superintendent where he has served until his announced retirement this year.

Not only active in his professional duties, Dr. Kittinger has also performed great service to the community and public education in general. He has been active in the chamber of commerce—Man of the Year in 1965—as well as the PTA to which he was awarded life membership in 1955. Dr. Kittinger is also a recipient of the "Continuing Service Award for Outstanding Service to Children and Youth" which was awarded by the Charter Oaks Council PTA in 1967, and also serves as chairman of the CASA State School Building Aid Committee. Dr. and Mrs. (Julia) Kittinger and their children, Linda, Kathy, John, and David, are active members of the Claremont Methodist Church.

A native Californian, Dr. Kittinger was born in Pomona. He graduated from Claremont High School in 1939; La Verne College—BA, in 1948; Claremont Graduate School—MA, in 1957; and received his Ed. D. in 1967 from the University of Southern California. He holds like credentials in general elementary, general secondary, general administration, elementary administration, and secondary administration.

Additional education activities of Dr. Kittinger include:

Panel member of American Association of School Administrators—AASA; secretary, Association of California School Administrators Superintendents Committee—ACSA; secretary California City School Superintendents—CCSS; member Tri-County Superintendents Committee; member, Irving R. Melbo Chair Search Committee for the University of California, School of Education; Educare Projects Committee—received citation of merit "for his inspiring leadership and untiring efforts as president" 1973–74. He is a member of Phi Delta Kappa, and Society of Delta Epsilon, 1977–78.

While retiring from the Charter Oak District, Dr. Kittinger is not leaving education, but will continue to serve as a faculty member of the USC Graduate Centers Overseas Program in Germany.

The Charter Oak students and residents will miss the leadership and counsel of educator and friend Dr. Frank Kittinger; but we all wish him well in his new assignment and know that others too will benefit from his broad experience and knowledge of teaching and education.

RODINO PAYS TRIBUTE TO BRONZE SHIELDS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. RODINO. Mr. speaker, I would like to bring to your attention, and that of my fellow colleagues, the Fourth Annual Awards Dinner of the Bronze Shields to be held this Sunday, May 22, at the Howard Johnson's Restaurant in Newark, N.J. It is with extreme gratitude that I will accept the 1977 Law Enforcement Award which will be bestowed upon me by this organization.

The Bronze Shields, a public service organization comprised of black police officers of the Newark Police Department, has demonstrated since its inception in 1959 an endless dedication and commitment to all aspects of the community, particularly in the area of law enforcement. As "protectors of freedom and guardians of justice," the Bronze Shields have encouraged police/community partnerships in the prevention of crime, and

fostered and improved communications and mutual understanding between police and community.

Indeed, we, the residents of Newark, are fortunate to have individuals such as these stressing the principle that "the administration of justice and crime prevention is a total community responsibility," and it is with great pleasure that I salute the entire membership for their outstanding service to the city of Newark.

A TRIBUTE OF RECOGNITION TO OPHELIA BONNER

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. KILDEE. Mr. Speaker, I want to take this opportunity to refer my colleagues to a remarkable woman from Flint, Mich. Her name is Ophelia Bonner, and she is responsible for what the Flint Spokesman recently headlined as "Flint's First Black Landmark." Mrs. Bonner helped raise more than $12,000 for development of a park for the families of Flint, and the park recently was named in her honor. She also established the Ophelia Bonner Scholarship Fund, under whose auspices 12 high school students will participate in an oratorical contest on June 5, 1977, at Jefferson Community School in Flint.

She has been active in civic affairs and in helping to build the community's pride and self-reliance ever since she arrived in Flint nearly 30 years ago with the intention of retiring. Her efforts and accomplishments are a tremendous tribute to the great contribution to others that so many retirees and elderly people are making.

I am proud to bring the story of this remarkable, distinguished woman to the attention of my colleagues, and I am inserting at this point in the RECORD an article from the Flint Journal which outlines her accomplishments:

FOLKS SAY "THANKS" TO OPHELIA BONNER

(By Irene Evans)

Mrs. Ophelia Bonner of Lomita St. came to Flint almost 30 years ago to retire—and she's still working on it.

In that time, she's been busy with scholarships, raising funds for community projects and rearing 15 foster children.

Though she's been honored in a number of ways by the people in the Jefferson school community, she was ecstatic Thursday when a small delegation gathered at the school to present her with yet another token of thanks.

"Jefferson's community is a part of my life," Mrs. Bonner said as she accepted the gifts. "I know I came to Flint to retire, but when I arrived I saw that there was a lot of work to do."

Mrs. Bonner is credited with helping to raise $12,000 for the former Jefferson-Oak Knoll Park near the school. The park was named for her in 1976.

She has also established the Ophelia Bonner scholarship fund, and is the recipient of a Liberty Bell award from the Genesee County Bar Association, a Sojourner Truth award from the Negro Business and Professional Women's Club and numerous other awards from civic groups.

Mrs. Bonner, who says she's "around 80 years old," was the founding secretary of the local chapter of the National Association for the Advancement of Colored People; a former head of the Model Cities communication committee; a former member of the Flint Beautification Committee and a fund raiser for Canaan Baptist Church, which later became Christ Fellowship Baptist Church.

"I haven't done all of the work on these things by myself," Mrs. Bonner quickly added. "I had the cooperation of a lot of people."

The delegation had originally planned to walk the two blocks to Mrs. Bonner's home because she had recently undergone surgery.

"But what will be, will be," Mrs. Bonner said. "And besides, I wanted it (the presentation) to be in Jefferson school."

Among her gifts were a bouquet from Mrs. Charles Stewart Mott and a plaque from the Jefferson School Advisory Council.

"My house is just full of all kinds of gifts," Mrs. Bonner said. "I don't know what I'm going to do with them all."

In her spare time, Mrs. Bonner makes framed awards of her own to present to various people who have helped her in community work.

"I've given out at least 50 of them in the last year," she said.

Mrs. Bonner's philosophy is to keep busy when there's work to be done—which probably explains why she can't seem to get around to retiring.

"Everyone in this world should be able to contribute something worthwhile to enrich a great happening," she wrote in a thank you to the community. "There is always something to learn each and everyday of one's life."

ST. JOHN'S UNITED METHODIST CHURCH OF EDWARDSVILLE, ILL., CELEBRATES 150TH ANNIVERSARY

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. PRICE. Mr. Speaker, on Sunday, May 22, the congregation of St. John's United Methodist Church of Edwardsville, Ill., will celebrate its 150th anniversary.

St. John's is one of the oldest congregations in Illinois—in fact, the people of St. John's have been dedicated to the service of God and man for almost as long as Illinois has been a State. The congregation has not only seen its city grow from a small town to a thriving city, but through the hard work and perseverance of its people, St. John's has been an integral part of that growth and success.

Mr. Speaker, we all hear a great deal of talk these days about the destruction and degeneration of American society, of the American way of life. I fear too many people believe that this is the truth and it is for this reason that I wish to call the attention of my colleagues to the milestone reached this week by St. John's. This celebration would not have been possible had not the good people of St. John's stuck together and worked hard to keep their church, their faith, their families intact, hearkening back to the good old pioneer spirit of the first Illinoisans and ever earlier, to our first patriots.

I commend St. John's, its pastor, Dr. William B. Lewis, and its congregation past, present, and future for their fine work. I know I speak for all the Members when I say their dedication to their God and their country is appreciated.

FLORENCE RUBIN

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. MOAKLEY. Mr. Speaker, Massachusetts will lose a most valuable public citizen this year when Florence Rubin retires after 4 years as president of the Massachusetts' chapter of the League of Women Voters. A tireless organizer with a keen sense of political know-how, Rubin has been effective in dealing with many sensitive political issues on the State level.

Mr. Speaker, I wish to share with my colleagues an article from the May 3, 1977, issue of the Boston Globe which details the remarkable accomplishments of Florence Rubin.

LWV LOSES EFFECTIVE PRESIDENT

(By Carol Surkin)

The Massachusetts League of Women Voters will lose one of its most effective persons on May 18 when Florence Rubin retires after four years as LWV president.

Rubin rose to become the state league's most active leader since the presidency of Lucy Benson in the early 1960s. Rubin moves behind the scenes, so she has little public recognition, but her instincts, organizational skills and lobbying ability have been invaluable to the league during her two terms as president.

Court reform is one of many issues Rubin has fought for. She served as a member of the Cox Committee which produced the current blueprint for court reform in Massachusetts. Not only did Rubin work hard developing the committee's proposals, but she also has become an important lobbyist for the committee's package of reforms.

Talking to legislators, the governor's office, community leaders, judges and newspaper editors, she has worked carefully to build public and legislative support for major court reform this year.

Rubin is realistic about the problems facing the Cox Committee's plan. She understands legislators do not want to relinquish their power over courthouse jobs. (Patronage would decline under the proposals.) But she also perceives the need for the Legislature to respond to public pressure for reform. Rubin has been organizing, through the league and outside, to build a public lobby for court reform.

Along with making things happen, Rubin has recognized the importance of being able to kill things. For example, moving very unobstrusively, Rubin was a major factor in the demise earlier this year of Mayor Kevin White's dubious charter change plan for Boston.

Several years ago, Rubin, a Newton resident, served on that city's charter commission, which revised the municipal charter. She had studied charter changes adopted in cities across the country. She knew the merits and weaknesses of many different systems and was concerned about the poor quality of White's plan. As a strong advocate of citizen participation in government, she was alarmed at the way Boston voters' powers would have been limited by the plan.

Technically the state league works only on its issues positions, which are arrived at through study and consensus. Then the state league officially lobbies for its program.

But the league is concerned with the issues of home rule and citizen participation, and that was enough for Rubin! She encouraged the Boston league to challenge the charter plan. That was the first serious, establishment opposition to the mayor's proposal and it lent credibility to other community groups which were also demanding a better plan. In addition to her work with the Boston league, Rubin also lobbied at the State House to change the bill. Finally, City Hall's no-compromise position forced charter opponents to advocate killing the plan.

Since then, Rubin has advised a community coalition which hopes to get an elected charter commission for Boston.

Rubin's official league role has kept her involved in two important state issues. The first is fiscal policy and the need for tax reform. She has been an eloquent advocate of the graduated income tax and property tax reform. League positions sometimes clash with business community interests but Rubin has established rapport with a number of Boston's best business leaders.

(She has a network of contacts—inside and outside government—from top leaders to knowledgeable staffers. This has provided her with valuable information as well as influence.)

The second issue is public higher education. Last year Rubin labored behind the scenes, seeking workable compromises to save the plan to reorganize the state's public higher education system. She had served on the Massachusetts Board of Higher Education and knew the failings of the state system. But the controversial reorganization plan was sponsored, and then killed, by Senate President Kevin Harrington. Although the system still needs reform, Harrington is unwilling to support any new reorganization schemes.

Rubin, a former chemistry teacher, thrives on political issues and political people. She recognizes that, ultimately, whether issues rise or fall depends on the public officials they touch.

Although the league has other accomplished lobbyists, Rubin's activist leadership will be missed. She has no specific plans, which worries those who know her. The repeated question is: "What is Florence Rubin going to do now?" She is too good to drop out of full-time public service.

AGENCY FOR CONSUMER PROTECTION

HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. ROUSSELOT. Mr. Speaker, last week the House Committee on Government Operations voted out the Consumer Protection Act, H.R. 6805. The vote was 22 to 21. I believe that this narrow margin indicates the shaky ground upon which this highly unnecessary legislation is based.

The Consumer Protection Act is primarily based upon three faulty assumptions: First, the consumer is gullible; second, business is avaricious and criminal by nature; and third, Government is infallible. Based on this logic, then, we are told that more "big brother" bureaucracy is needed to protect the unwary consumer. This is not the case. Federal agencies already exist which are supposed to operate in the "public interest." If they are not doing their job, then the proper remedy is more diligent oversight by Congress, not the creation of yet another superagency to act as a "watchdog for the watchdogs." During the 94th Congress, when similar legislation was being debated, President Ford sent a letter to Members of Congress regarding the proposed new agency. In part his letter read as follows:

I do not believe that we need yet another federal bureaucracy in Washington, with its attendant costs of $60 million for the first three years, and hundreds of additional federal employees, in government. At a time when we are trying to cut down both the size and the cost of government, it would be unsound to add another layer of bureaucracy instead of trying to improve the underlying structure. It is my conviction that the best way to protect the consumer is to improve the existing institutions of government, not to add more government.

Certainly, given President Carter's goal of reducing the cost and size of Government, these same arguments still apply today.

In an editorial from the May 14 edition of the San Francisco Chronicle. H.R. 6805 is referred to as an "alarming charter of unlimited, unrestrained, undefined powers * * *." I urge my colleagues to consider the arguments of the Chronicle editorial, as well as the administration's goal to cut the cost and size of the bureaucracy. as this issue continues to be debated and ultimately comes to the floor for consideration:

A SUPERAGENCY WE DO NOT NEED

A bill to establish an Agency for Consumer Protection passed a House committee this week by a single vote. We would have been happy if that vote had gone the other way so as, while yet in embryo, to dispose of this 1977 embodiment of the Holy Grail of consumer activists.

The measure creates a new agency, independent of the 33 other agencies and approximately 400 bureaus that conduct 1000 consumer-oriented programs already existing in the federal government. It gives the new agency procedural authority to break into the proceedings of these other consumer-protecting agencies to call their acts into question. It has been called a "litigation strike force," and we don't believe it could be trusted to do anything of redeeming social importance.

It would be charged to "protect" and to "represent" the "interests of consumers" in nearly every activity of the federal government (we quote here from a letter by Leon Jaworski expressing his opposition to the bill). It would grant the ACP administrator the right to appear before agencies and departments, the right to issue subpoenas, the right to sue the government, the right to speak on behalf of the "consumer interest."

What is that interest? The bill does not define it. We doubt if anybody could, in a generalized sense. Moreover, we don't think that Jaworski, the skilled Watergate special prosecutor, can be disputed when he says: "Given that the power to sue executive departments is a keystone of the legislation, I assume that the administrator would not, in fact, be subject to control by the President."

This country does not need or want a super-agent empowered to barge into every private business and industry and into every official regulatory agency or commission or bureau to raise questions about how they're dealing with the interests of 215 million American consumers. This bill, H.R. 6118, is an alarming charter of unlimited, unrestrained, undefined powers that President Carter, Vice President Mondale and, apparently, Ralph Nader have handed to Congress. We're quite surprised that Jimmy Carter, the man who has drawn his sword to snicker-snee all kinds of regulatory agency excesses and overgrowths, would fall for it.

FINANCIAL STATEMENT

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. MIKVA. Mr Speaker, following is a statement of my net worth, earnings, and taxes paid for 1976. I am making this information public as I have each year I have been in Congress and while I was chairman of the Illinois Ethics Board.

I believe that Congress made the right decision by including in the new ethics code a provision for annual disclosure of financial interests and income by each Member of Congress. By making our financial holdings and sources of income part of the public record, we are helping to restore the assurance to our constituents that congressional decisions are not being influenced by secret financial interests.

My financial statement follows:

FINANCIAL STATEMENT—NET WORTH STATEMENT OF CONGRESSMAN ABNER J. MIKVA AS OF MAY 1, 1977

ASSETS	
Home at 1015 Sheridan Road, Evanston, Ill.:	
Purchase price and improvements	$80,000
Less mortgage at Exchange National Bank	42,000
Equity	38,000
One-half interest in house in Lakeside, Mich.:	
Purchase price	17,500
Less loan at Continental Illinois National Bank	12,000
Equity	5,500
Cash in banks:	
Exchange National Bank of Chicago	100
Sgt at Arms	800
Equity in pension funds:	
State of Illinois	5,000
U.S. Congress	25,500
American Bar Association Retirement Plan	1,900
Stocks and bonds:	
Ero Mfg. Co. 1,100 shares at 1¾	1,900
U.S. Gypsum 50 shares at 25	1,250
Unarco Corp. 500 shares at 12½	6,250
State of Israel bonds—purchase price	3,000
Executive House debenture	400
Harper Court bond	100
Carson's—111 shares at 20½	2,300
Cars, furniture, miscellaneous	10,000
Account due from sale of real estate investment in Evanston, Illinois	8,000
Total assets	110,000
LIABILITIES	
Loan from Exchange National Bank of Chicago	3,500
Loan from Amalgamated Trust & Savings Bank	2,000

Loan from National Bank of Washington	$1,500
Total liabilities	7,000
Net worth	103,000

FAMILY INCOME STATEMENT OF ABNER J. MIKVA FOR 1976

Income as member of Congress, Abner J. Mikva	44,600.00
Salary from Evanston School District, Zoe Mikva	12,112.00
Dividends	865.41
Interest income	1,019.00
Honorariums	7,061.00
Total income	65,657.66
Less dividend exclusion	200.00
Less tax deductible expenses, personal exemptions and deductions	21,626.14
Net taxable income	$43,831.52

Income taxes paid: U.S. (joint return) $14,356.95; Illinois (joint return) $1,433.95.

THE SALZBURG CONFERENCE FOR A NONNUCLEAR FUTURE

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. FISH. Mr. Speaker, during the last week in April, citizen groups from 19 nations met at the Salzburg Conference for a Nonnuclear Future to discuss world energy strategy.

A wide spectrum of nations were represented at this conference—Japan, Malaysia, Sweden, the EEC countries, and the United States—citing nuclear proliferation as a threat to the human environment and calling for the phasing out and eventual end to plutonium breeder programs.

This international meeting, together with the recent story in the New York Times which discusses the West German Government's decision to cut back on their breeder programs, points to a strong worldwide citizen opposition to the enormous problems connected with nuclear power.

In the long run, Mr. Speaker, governments must be responsive to their citizens. Following is the declaration of the signatories to the Salzburg Conference:

DECLARATION OF THE SALZBURG CONFERENCE FOR A NON-NUCLEAR FUTURE

We are citizens from 20 countries throughout the world. We differ widely in wealth, in political opinion, in religion and in cultural experience.

But we share a common concern and a common hope.

Our concern is that the present and future wellbeing of mankind is being needlessly endangered by the decisions of governments to continue the use and developments of nuclear power.

Our hope is that mankind will act in time to prevent further irrevocable commitments to a nuclear future. We are part of a global wave of opposition to nuclear power which is growing in force and which has recently moved some governments to review their nuclear policies. We therefore feel a responsibility both to explain our cause for concern and to demonstrate the availability of a nonnuclear world.

Listening to the voices from Hiroshima, Nagasaki and Micronesia, we share the widely held belief that the proliferation and indeed the continued existence of nuclear weapons threatens the future of all people, and that current progress towards general disarmament is totally inadequate. Moreover, nuclear proliferation is only one aspect of this global problem.

Nuclear weapons can be made from a few pounds of plutonium or uranium. Since the purpose of the breeder and the reprocessing of spent fuel is to separate plutonium or equivalent fissile materials, access to those technologies is access to the capacity to manufacture nuclear weapons. The increasing deployment of these technologies will dramatically increase the risks of nuclear warfare.

New technologies involving lasers and centrifuges are being developed for the purpose of reducing the cost and increasing the efficiency of enriching uranium. The commercial development of these technologies represent a danger to world security, as does the absence of adequate safeguards on the production, storage and international shipment of natural and low-enriched uranium.

No level of international safeguards which is remotely feasible can prevent a determined government from diverting fissile material into weapons manufacture. Thus the development of these technologies will inevitably facilitate the proliferation of nuclear weapons.

Weapons proliferation is unlikely to be confined to national bodies. The relative ease with which stolen plutonium could be fabricated into a weapon adds a new dimension to terrorism. The measures necessary to prevent thefts, recover stolen plutonium and respond to credible threats must lead to the erosion of human rights with repercussions for the social and political fabric of our societies.

These and other considerations lead us to reject the breeder reactor and the use of plutonium or other bred fissile materials as nuclear fuels. Reprocessing of spent fuel is therefore unnecessary, uneconomic and undesirable, and all spent fuel has to be securely stored.

Thermal reactors, which form the heart of the present nuclear programme, pose major unresolved problems of proliferation, safety, environmental protection, occupational health and radioactive waste disposal. It is these hazards which have generated the growing public distrust of thermal reactors.

Moreover, the economic case for their further deployment does not stand critical examination. Nor are nuclear reactors essential to the creation of full employment: indeed, they may be inimical to it.

In order to achieve a non-nuclear future as soon as possible, we believe that the building of any further nuclear facilities should be strongly resisted, and that all governments should forthwith adopt energy policies which provide for the replacement of nuclear power by alternative energy sources as soon as possible.

Those governments, institutions and individuals who assert the necessity of nuclear power do so on the basis of a fundamentally mistaken conception of energy policy, which confuses costs and benefits and neglects to consider the end uses of energy.

We believe that energy policies should be conceived in terms of doing more useful work with less energy, of matching production means to end-use needs, and of reducing vulnerability to interruption. Such policies do not require the use of nuclear power, yet they would be adequate to the needs of the whole world.

In the developed nations such policies would rely primarily on the reduction of energy waste (for instance by actively supporting the introduction of cogeneration and stopping inappropriate uses of electricity) together with the forceful development of alternative energy sources, in particular diverse forms of solar energy. This must involve diminishing the energy growth of these nations and in the long term stabilising their per-capita energy use.

In the developing nations centralised electricity generation is no more a priority than in the developed world, and will tend to exacerbate rather than ameliorate the problem of meeting basic energy needs, especially in the villages of the Third World where half of humanity lives.

The energy needs of the developing nations could be met primarily by solar energy, biogas and other decentralised technologies.

Furthermore, nuclear power increases rather than decreases the dependence of developing countries on the industrialised world, while widening the disparity in wealth between them. We cannot see that any global energy strategy which fails to assist a more equitable distribution of wealth could, or should, succeed.

Such a highly centralised and capital-intensive technology as nuclear power leads to a further concentration of economic and political power in all nations.

Compared to nuclear power, the technologies we propose are—for all nations—cheaper, more reliable, easier to deploy, less disruptive of existing social and cultural patterns, more equitable, less damaging to the environment and more amenable to democratic control.

We are unanimous in our conviction that a non-nuclear future, based on the policies we are advocating, offers people a more secure and a more humane world. We believe that such a future is not only possible but widely desired throughout the world, and to this end we call upon concerned citizens everywhere to demand by non-violent means that international institutions and governments shall:

Immediately close down all fast breeder reactor and fuel reprocessing facilities, and end the development and sale of such facilities.

Immediately develop specific programmes for phasing out all thermal reactors as soon as possible.

Immediately halt development of technologies for enriching uranium by means of lasers and small and efficient centrifuges, and add an international escort service for shipments of all nuclear materials between nations to the safeguards functions of the IAEA and EURATOM.

Divert the funds and human energies released by all these shifts of priorities into the deployment of those alternative technologies which are already available.

Establish a substantially funded international energy organization charged with the development, promotion, and transfer of non-nuclear energy technologies, which should not be based on the existing IAEA (although the IAEA and EURATOM should continue to strengthen and perform their safeguards function for as long as necessary).

Redirect development assistance in favour of non-nuclear energy technologies.

Develop widespread mechanisms for public participation at all levels of energy policy decision-making. Such mechanisms should pay special attention to the needs of workers, women and other groups who have uniquely valuable perspectives to contribute.

Emotional and personal involvement have been defined as "unscientific" and "irrational". In fact, issues which concern the lives of human beings must be defended with emotion and personal commitment: they must not any longer be only the subject of abstract calculations. In questions of this magnitude, we may not be detached. We must be partisan.

This declaration represents the common

ground of agreement between the delegates of many nations. Inevitably differences in political tradition and national circumstance create differences in emphasis on some arguments and differences in approach to the handling of the issue. These differences should not be interpreted as any weakening of our resolve to pursue by all possible non-violent means the early arrival of a non-nuclear world.

FOOD AND PEOPLE 1977

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement made by Mr. Frank Ford, a graduate of Texas A. & M. University concerning food and people. This speech was made by Mr. Ford in New York's Coliseum during the latter part of April, and I commend it to the Members of this body.

The statement follows:

FOOD AND PEOPLE—1977

(By Frank Ford)

This year will probably be remembered as the year that we learned, once and for all, that our food resources are finite. The harsh winter in the East, the severe drouth in the West of our nation has just begun to take their toll as prices for fresh fruits and vegetables double and triple.

The scientists at the National Center for Atmospheric Research have stated that a major drouth appears to be overdue for the U.S. Great Plains, raising the threat of a situation more serious than that in sub-saharan Africa. There are also indications that the Northern Hemisphere is cooling, which would shorten the growing season in Russia, Northern Europe, Canada and China, as well as the Northern U.S. Meanwhile, populations continue to grow.

The U.S. agricultural system, touted as the most efficient in the world, is in fact dependent upon several calories which come from fossil fuel produced half way around the world to produce one calorie of nutrition. We are, of course, very vulnerable to having much of this supply cut off at any time.

Unfortunately, the inefficient barrage of acidulated fertilizers, herbicides, and pesticides which have been unleashed against nature since World War II is not the end of the tragedy. The already weakened foods are then subjected to the most intensive "strip mining" in the history of humankind. The highly refined fiberless foods, filled with coloring agents, additives and preservatives of all sorts, are then foisted upon our children by immense, highly sophisticated advertising budgets as soon as these children are old enough to sit in front of a TV set.

Meanwhile, the increasing incidence of heart disease, colon cancer, diverticulitis and dozens of other maladies is putting such pressure on the health facilities and budgets of families and various levels of government that any geometric projection would indicate a total collapse of society within the next few years. To put it simply, Babylon (here defined as any system which places its confidence in humanism and technology above the laws of God and nature) is falling in upon itself.

When we work with nature, we have millions of little friends in every cubic yard of earth. The mircolife in the soil produces nitrogen from the air, digests last year's stubble, and prepares for the new. Soil is a biological function, not a chemical function, and a living soil should be the goal of every farmer. One can just feel and smell the difference between living soil and the soil where the life has been mined out through short term goals or careless greed.

In addition to the soil bacteria and earthworms, whose castings are much richer in nitrogen, phosphorous and potassium than the soil they ingest while they aerate the soil, and in addition to the stronger plants with thicker cell walls which result from balanced, living soil, we have the beneficial insects working to keep things in balance and harmony. God designed such a remarkable home for us, and we have used our technology to destroy much of it. Hopefully, we have begun to be more aware of this.

In terms of sheer economics, the increasing cost of oil is tilting the scales ever more heavily toward the natural methods, ecologically aware farmer, and his ability to pay the bank off at the end of the crop year is now much better than that of the farmers who have tragically been led into the self-defeating cycle of chemicals.

The whole foods concept, of course, is the key, once the food is grown right and cleaned through good equipment. We are constructed to function well on whole natural foods, such as our ancesters enjoyed through the centuries until profits, shelf-life and other considerations got the best of our national better sense.

Many people are finding out that they can actually reduce their food budget and enjoy much better health at the same time through learning to use grains, beans and seeds in delicious whole food recipes. Sprouting is also a key, and can be done in even the most crowded apartment, along with a small herb garden perhaps in the window sill.

It has been very encouraging to us that *The Deaf Smith Country Cookbook* and *The Simpler Life Cookbook* have each sold nearly a quarter million copies, and are selling at an increasing rate. These two books, containing no meat or refined sugar, are designed to help people get into natural food cooking and contain basic information on different foods, cooking times, sprouting charts, sourdough baking, etc. along with over 200 recipes in each book.

The marketing of natural foods has been an interesting thing to observe and be a part of. The young people, many of whom had no capital or previous business experience, have truly made a good and gentle revolution, and the natural foods industry is here to stay. It is being copied, counterfeited, scoffed at and otherwise honored by those whose boats of economic interest have been rocked a bit, but it is truth and it will keep on coming.

The Average American ends up over 1100 miles from his or her average food supply. This is not 1100 miles as the crow flies. It may have started out as a nice field of beans right next door to the nice family who ultimately bought a wee bit of it. But meanwhile it was hauled three times and processed twice, all with imported fossil fuel.

One of the most important things we should discuss, I think, is growing it at home, and storing and canning as much as possible. The trend toward more organic gardening is really encouraging, and it will do more for a person than supply fresh, healthy produce. It is also very therapeutic to get out and work with the soil.

Hard times are coming that most of us have never seen before, and I think the young people of the sixties who rebelled against the status quo have been and are making some very important contributions to our national life. The problems have not all been solved, nor will they be while we are in this age, but we can each do what we can and be a bit more loving and forgiving of those who don't understand all the truths that we have come across, sometimes very recently. Good, whole food, grown on fertile soil and prepared and eaten with gratitude and love—this can help solve many problems.

There is also a large block of voters who can help solve the problem. I refer to the millions of middle to low-income grocery shoppers in the United States who fill their grocery baskets to over-flowing each week with the worthless junk which has now become "traditional" in their consciousness. They are now voting with their dollars and food stamps for Babylon. But Babylon is doomed. It cannot save itself. And thus it cannot save them. There are some answers. They are called grains, beans, seeds, gardens, sprouts, self-sufficiency, community action, mutual help, education, sharing, love. These are not ethereal concepts. They are practical. They will work. They are the only solutions which will work.

Frank Ford, age 44, has farmed organically in Deaf Smith County, Texas for 25 years.

He is a graduate in Agronomy from Texas A and M University where he was designated

as the Outstanding Graduate, School of Agriculture.

Founded Arrowhead Mills, Inc., a natural whole foods company in 1960. Currently serves as Chairman of the Board.

Serves on an advisory committee to the U.S. Secretary of Agriculture, a position held under the past three Secretaries of Agriculture.

In 1976, was named American of the Year by the American Religious Town Hall, an organization of Protestants, Catholics and Jews for the promotion of better understanding among peoples.

Has spoken at many food conferences and conventions, including the University Conference on Hunger in 1976.

Is the author of two best selling books, *The Simpler Life Cookbook, Back to Nature* and *New Harvest*. His wife, Margie, is co-author of the best selling *Deaf Smith Country Cookbook*.

OPERATION RECOGNITION: SETTING AN EXAMPLE IN MALDEN TO INSPIRE THE WORLD TO ACT

HON. EDWARD J. MARKEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. MARKEY. Mr. Speaker, I wish to bring the cause of Operation Recognition to the attention of my colleagues. For 27 years the Magen David Adom—or Red Star of David—has been performing humanitarian deeds for people of all backgrounds. Yet the Red Cross has refused to recognize Magen David Adom during this period. The reason for the lack of acceptance is an unfortunate one: Because the Israeli organization, for religious reasons, refuses to accept the Christian symbol of the Red Cross, it has been denied admission to the international organization.

It is important that we show our support for the Red Star of David and that we fight discrimination. Such blatant anti-Semitism should not be tolerated. It is a further indication of the unfortunate battle which Israel must fight to survive as a nation.

The fine work of the Red Star of David must be recognized. The organization should be allowed to join the International Red Cross for the mutual benefit of each of these humanitarian organizations.

At this point in the RECORD I wish to insert the address I made at the Operation Recognition ceremonies held in Malden, Mass. The function was held on April 24, 1977, as a celebration of the 29th anniversary of Israel's proclamation of independence:

OPERATION RECOGNITION: SETTING AN EXAMPLE IN MALDEN TO INSPIRE THE WORLD TO ACT

Allow me first to begin by congratulating Neici Degen for her fantastic job in organizing this strong show of support for Operation Recognition today, the 29th celebration of Israel's proclamation of Independence. It is truly an honor for me to be here with you this afternoon. And it is a pleasure for me to take a moment and report on the success we have had this week in the U.S. House of Representatives, a success very much in the spirit of today's gathering. By a vote of 364 to 43, we have passed legislation which will prohibit U.S. businesses from knowingly complying with the Arab boycott of Israel. This action in the House is long overdue, and I hopo the Senate will swiftly follow suit.

But today we gather in Malden to take another action. We gather to share in a most auspicious moment, to drop a pebble into the water, a pebble whose ripples will extend far beyond this community. For Operation Recognition is an international cause. It brings together many people all over the world, just as today in Malden each of us has come to this place. The Lincoln Junior High School is a place rich with history in the memory of those who recall that many Jewish emigrants at the turn of the century and through the 1920s came here to study for their naturalization papers as U.S. citizens. In this same place today we meet to reaffirm the fundamental principles of brotherhood—and of sisterhood—among peoples and nations.

We meet to give new impetus to the aims of Operation Recognition. We meet to dedicate ourselves to ensure that Israel as a nation is treated equally by the International Red Cross. And we remember that this cause is only one element in the fundamental and underlying pursuit of real peace and defensible territorial integrity for the state of Israel, coming with a settlement of the bloody quarrels in the Middle East through the establishment of a just and permanent peace. We meet, finally, in what is the first occasion when a community joins together in support of fair treatment for Israel in the organization of the International Red Cross.

For 27 years the Magen David Adom—or Red Star of David—has served both friend and foe on the battlefield, and in other times of crisis and human need, with the same humanitarian compassion that is the hallmark of the International Red Cross. Yet the Israeli organization chooses as its emblem the Red Star of David—the Magen David Adom. From religious conviction Israel cannot accept the Red Cross of Christianity as the symbol for its own organization for the relief of human suffering.

Israel qualifies in 9 of the 10 provisions for admission to the International Red Cross. She adheres to the 7 principles of conduct and service. Yet, she is still denied admission into the League of Red Cross Societies. The reason is simple. Unless Israel adopts the Red Cross, the Red Crescent of Moslem nations, or the Red Lion and Sun of Iran, she is refused admission to the League.

When Turkey notified the Swiss Government in 1876 that she would henceforth use her own symbol—the Red Crescent—despite the requirement of one, uniform, identifiable symbol, tacit approval followed. The same policy came into effect when Iran, then called Persia, chose to use the Red Lion and Sun. The religious implication in the use of the Red Lion was the basis for their objection, and though no vote was taken, again there was tacit approval.

But in 1949 when Israel advanced these same grounds on behalf of the Red Star of David, a different policy obtained. By a vote of 22 to 21, with 7 abstentions, Israel was denied the use of her Red Star as an international symbol of recognition.

The issue, year in and year out since 1949, has been that of basic equality of treatment. This is one which touches upon the very heart of the Middle East dilemma. Common sense and common decency dictate that the International Red Cross show Israel the same courtesy it has bestowed upon other nations. No one complains of Israel's humanitarian services. Even her enemies recognize the validity of the Red Star, and what it signifies. Now, what is required is that people everywhere join together to make this simple demand: Admit Israel to her rightful place in the community of nations, and take one step at once in this direction by admitting Israel to her rightful place in the international community of the Red Cross. Already in Massachusetts our state Legislature is one of three state legislatures in America who have passed a resolution to this effect. Now, we in the community of Malden join to ask the International Committee of the Red Cross—an institution composed entirely of Swiss citizens and based in Geneva, Switzerland—to act without further delay and remedy this long-standing injustice.

The immediate benefits to Israel stemming from recognition by the International Red Cross are many. As a member Israel would enjoy complete assurances of assistance from the world community in times of disaster and conflict. Release of prisoners could be negotiated with greater facility. Emergency provisions of food, shelter, and medical supplies would be a matter of right, not of charity.

We must remember, however, that the question of the Red Star of Israel is symbolic of the much larger injustice. We all know that Israel today depends for her immediate survival upon the strength of her arms and the courage of her people. We all remember the dangers which haunt this nation. We all remember the infamy of the Resolution of the United Nations which denounced Zionism as a form of racism, which was itself an endorsement of the world's oldest form of racism: anti-semitism.

Today we do more than call for the recognition and participation of the Red Star of David in the International Red Cross. We call for the recognition and firm guarantee of the right of Israel to exist, free from the threat of a war of extermination. The world must come to know that the existence of Israel is a right of history, born thousands of years in the past. This right was for many ages nothing more than a dream. Since the destruction of the Temple by the soldiers of Rome, the Jews were a wandering people, adrift among nations. But the nourishing dream of a homeland never once died.

And because of that immortal dream, Jews suffered wrongs which must forever haunt humanity.

In 1948 that dream was made real. What Mark Twain described in his travels as a "hopelessly dreary, heartbroken land" has become a nation rich with fertile fields, and strong with the most modern technology, flourishing cities, and democratic government.

Even today the need for this homeland is clear to all who have eyes to see. In the Soviet Union, Jews seeking passage to Israel are denied the basic rights of free emigration and suffer greatly for their efforts. The Accords signed in 1975 at Helsinki have proven a mockery inside Russia. In Congress, we protest. I have sponsored a resolution of protest, which has passed the House, and I have joined to support May 1 as "Solidarity Sunday" on behalf of the right of emigration from the Soviet Union. What greater testimonial could there be for the right of Israel to exist than this harrowing cry for a homeland from these Jews still being persecuted for their beliefs in Russia and elsewhere?

And even this homeland of Israel endures the greatest persecution of all: the never-ending threat to her very survival as a nation. For almost 30 years this people and this nation have lived under constant siege, broken only by the ferocity of intermittent open warfare. Therefore, now more than ever before, let me repeat the basic truth that unwavering American support for Israel is the key to her survival.

It would be foolhardy for America to attempt to dictate solutions to the final settlement which must come, before a lasting peace may be assured. Nevertheless, I believe American foreign policy must be guided by certain fundamental principles essential to a real peace. In general, these principles

are these: Cessation of all states of war. Acknowledgment of respect for the territorial integrity and sovereignty of all states. Limited Israeli withdrawal from territories occupied after the 1967 war, provided that there are American guarantees of real peace. Establishment of demilitarized zones to ensure security of all borders. And finally, the agreement of all parties on an equitable solution to the Palestinian problem.

In its proclamation of Independence, Israel stated its commitment to extend the hand of peace to all the states surrounding it and all nations. I think today is a good day to honor and reaffirm this commitment. It was the great Jewish statesman Moshe Sharett who stated our goal with such simple eloquence. "Let us think of the common people throughout the Middle East, who meet each other in the fields, who rub shoulders on the railways. . . . They are all fundamentally interested in the same things. . . . They want to see their national cultures flourish, and their peoples secure and independent. . . . There is strife today. There is fear and there is hatred. But beneath it all there is an upsurging of common human feeling which is bound to assert itself."

This is the spirit—the spirit of Moshe Sharett—which guides our actions here in Malden on this day of Operation Recognition. This same spirit of "common human feeling" has brought us all together.

This spirit unites us in our dedication to see that the work of Rabbi Rubin Dobin—and those of us here who have made this afternoon's gathering possible—can be realized: that the Red Star of David can take its rightful place among the international communities of mutual aid, the organization of the International Red Cross.

Our community of Malden is the first city to take this step. We are the first in the world. We cast a pebble into a turbulent sea, one pebble that breaks the water, and disappears. But a pebble can cast ripples in its wake that will circle all the globe.

Thank you.

ED KLESSIG: A MODERN DAY FOLK HERO

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. STEIGER. Mr. Speaker, active citizen participation in the political process is at the heart of our Nation's strength. Dating back to Washington, Jefferson, and Adams, we have a rich history of committed, involved individuals fighting for causes in which they believe strongly.

The activism of our forefathers is no less strong today. Americans still stand up to be heard on issues of deep concern to them. One such individual is Ed Klessig, a constituent of mine who was recently featured in a column written by syndicated writer Neal R. Peirce, who has been described as "the only national chronicler of grassroots America."

Ed Klessig is a farmer who has fought for the past several years against encroachment of superhighways on farmland in the eastern part of Wisconsin. As Peirce said:

In the process, Ed Klessig has become a folk hero in Wisconsin, a modern-day embodiment of the state's feisty tradition of populist citizen protest, a man ahead of the politicians.

I can think of no more apt description of Ed Klessig. The story of the "war" he has waged against State officials intent on placing I–43 through the dairylands of eastern Wisconsin is one that all who read the RECORD should consider carefully. Though the highway is being built as the State engineers planned, Ed Klessig has raised the consciousness of all in the State over the consequences of unbridled growth to Wisconsin's most precious resource, its farmland, as well as to people's homes in Milwaukee and other cities.

Neal Peirce did an excellent job of capturing the essence of what Ed Klessig has done for the State. A copy of his article, "Ed Klessig: A Modern Day Folk Hero," which appeared in the May 7 Sheboygan Press follows:

ED KLESSIG: A MODERN DAY FOLK HERO

Whether it's farmlands or city neighborhoods they imperil, new interstate roads and superhighways are coming under mounting attack across the country. Wisconsin, where farmers and city residents are making common cause against the bulldozers, epitomizes the struggle.

This column centers on farmer Ed Klessig, a citizen protestor in the classic Wisconsin tradition. Klessig lost his battle to block an interstate from slashing through his and his neighbors' fertile farmlands.

But he appears to be winning the war to stop unnecessary new expressways across the remainder of rural Wisconsin. Nineteen Milwaukee legislators have now mounted a parallel effort to stop new superhighways in their beleaguered center city.

(By Neal R. Peirce)

"If that animal steps out, we'll shoot her," said the capitol policeman, fear and puzzlement written across his face.

It was not your normal confrontation. The time was four o'clock on an April morning last year, the scene the pristine state capitol lawn in Madison.

And there were a group of farmers, audaciously setting up tents and holding pens, establishing their own little barnyard directly below the windows of the governor's office. But the lead cow obstinately refused to leave the truck.

Farmer Ed Klessig was talking fast, trying to convince the bewildered policeman that he and his little band were legitimate farmers, simply protesting a state plan to send an interstate highway through their rich dairylands along the shores of Lake Michigan, 100 miles to the northeast.

Suddenly the cow took one great lurchy jump and ran into the stockade that the farmers had surreptitiously erected under cover of darkness. "And from that moment," Klessig recalls, "the officers were as if disarmed."

So, for that matter, was official Madison. For a month the farmers and dairy cows camped out on the capitol grounds, dispensing free milk and manure for people's garden's, along with the gospel of why superhighways that disrupt farmlands are a sacrilege in the era of scarce energy and concern over food shortages.

Klessig and his followers were rebuffed: Gov. Patrick Lucey, decided to proceed with the construction of I–43, northward through the dairylands from Sheboygan to Green Bay.

Local officials favored the road, Lucey said, and a more modest highway wouldn't qualify for 90% federal funding. (Moderately heavy traffic on the existing 16-year old road, plus benefits for area trucking and other business interests, had also been cited by the interstate's backers.)

Critics said Lucey had simply knuckled under to the highway lobby—as Klessig puts it, "the county boards, the chambers of commerce, the state highway commission, the steel and cement people, the labor unions all determined to lay their hands on so-called free federal trust fund money and build the biggest dam thing they could."

But today, even as the bulldozers churn up the fields and maple orchards close to the land Ed Klessig, his forefathers and neighbors have cultivated since 1850, it appears that Klessig's band of protestors may have lost a battle but won the war.

Public opinion—in Wisconsin as in many other states—has shifted rapidly against new superhighways. Nineteen Milwaukee area legislators have come out strongly against new freeways in their city, defying union and business interests that helped put them in office.

New rural highways, especially those that parallel adequate older roads, are running into hornets' nests of protest from local farmers and citizens.

And in his budget message this year, Lucey said: "The time has come to curb our appetite for more highways and freeways. We cannot continue to sacrifice agricultural land and city neighborhoods in return for more and more concrete."

In the process, Ed Klessig has become a folk hero in Wisconsin, a modern-day embodiment of the state's feisty tradition of populist citizen protest, a man ahead of the politicians.

Of all the farmlands in America, I have rarely seen any more perfectly manicured, more naturally fertile than the gently rolling fields and scattered woodlands of this premier American dairyland.

And several hours with Klessig and his daughter and sons convinced me their cause goes well beyond narrow economic self-interest. Klessig will lose only 2.5 acres out of 550 he farms, and his son Eric an equal amount from an award-winning wildlife area he's developed.

It's the principle that bothers Klessig—the idea of a "monstrous" interstate on its 300-foot right-of-way, slashing through "priceless agriculture, woodlands and wetlands" lovingly tended and developed by generations of farmers.

Klessig says the interstate will divide farms "like a Chinese wall," forcing many farmers to detour machinery for miles to gain access to their land, while disrupting painstakingly constructed undersurface "tiling" systems that drain surplus moisture from the clay-like soil.

"It's unbelievable," he asserts, "that decision-makers in government would actually plan and willfully execute such a travesty on irreplaceable environment, and then pawn it off in the name of progress. Just that thought spurs you on to fight it to the very end."

Highway builders, Klessig charges, make glib promises about the minimal disruption their roads will cause. "But once they get permission to lay the road, the whole ballgame changes. They're totally in the driver's seat and make all the decisions on road location, timing, the price of the land. Through 40 to 50 years of clever lobbying, they haven't left a stone unturned in usurping the rights of farmers and homeowners."

Klessig is particularly irate about the highway planners' fondness for abandoning usable, existing roadways for new, parallel ones. Wisconsin's highway department, he notes, has plans to relocate enough roads by 1990 to cause the loss of 100,000 acres of agricultural land.

"Highway relocation," he says, "is fostered by real estate agents, land developers and special interest groups that will profiteer on the upsetting of communities."

Local town and county boards, Klessig says, often fall victim to the smooth blan-

dishments of highway builders and land developers promising non-stop progress. Farmers frequently turn out "to be their own worst enemy" when they "treat their land as a commodity, to profiteer and speculate with."

Some Wisconsin farmers are taking a leaf from Klessig's book and fighting new roads, however. When the state highway department recently sought a new fourlane highway paralleling the existing US-45 for 50 miles north of Appleton, their vigorous protest quickly scotched the project. The new state budget contains scant funds for new roads.

There's a striking parallel to Milwaukee's new anti-freeway mood. State Assembly Majority Leader James Wahner says that when he started fighting urban expressways in 1971, he was considered "sort of an odd duck."

But no longer—now his allies range from Mayor Henry Maier and U.S. Rep. Reuss to neighborhood groups agreeing that the superhighways "sack" the city by slicing up residential areas, destroying local businesses and shrinking the tax base.

The message of the 19 Milwaukee legislators who joined the antifreeway crusade, says Wahner, is that "we don't need any more exotic roads at $25 million a mile through center city so someone can get to a downtown job five minutes faster."

The legislators' new stand, Wahner says, "has sent labor and business right up the wall. They think we've all just taken leave of our senses."

But freeway opponents have gathered such strength that Reuss is now pushing a plan to build a "new town" in center Milwawkee on land once designated for expressway.

"That's the final insult, throwing sand in the face of the freeway backers—to take a piece of land, all cleared and ready for freeway construction and start a plan for new neighborhoods and new housing on it," says Wahner.

Ed Klessig, of course, is delighted by the Milwaukee protest. Whether it's farmlands or city neighborhoods, he notes, communities are finally making their voice heard to stop superroads that plough through "people's homes, their farms, their lives."

FRANK THOMPSON, JR., HONORED BY WAKE FOREST UNIVERSITY

HON. STEPHEN L. NEAL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. NEAL. Mr. Speaker, our distinguished colleague and my good friend, FRANK THOMPSON, JR., was honored May 16 with the honorary degree of Doctor of Humanities at his alma mater, Wake Forest University. This recognition is richly deserved by the gentleman from New Jersey because of his pioneering leadership and unwavering commitment to education and the arts and humanities. I am very pleased that Wake Forest University, which is in the district which I am fortunate to represent, has shown its appreciation for the contributions and talents of our colleague.

The Honorable FRANK THOMPSON, JR., also delivered the commencement address at Wake Forest. His remarks again demonstrate his famous wit, incisive intellect, and provocative insights. I would like to share his remarks with all of my colleagues:

LANGUAGE AND POLITICS

(By Frank Thompson, Jr.)

It is a great personal pleasure and privilege for me to have the opportunity to address this commencement day audience at my alma mater. I never dreamed when I left Wake Forest more than thirty years ago that I would return to speak on the day that marks the culmination of a Wake Forest education for the Class of 1977. I am deeply honored.

When I left Wake Forest, I had received a fine liberal arts education. I know that you the Class of 1977, have also been the beneficiaries of Wake Forest's strength as a liberal arts college and a great university.

LANGUAGE AND THE LIBERAL ARTS

In my view, one of the basic goals and accomplishments of a liberal arts education is to give each student a command of the English language. Words and language are one essential way in which we relate to our world. We use words to enlighten or confuse, to clarify or delude, to hurt and to heal. Not all words are appropriate for all places as George Carlin learned from the judge in Milwaukee after he did his monologue on the seven words you cannot say on television.

Dean Henry Rosovsky at Harvard has been leading an extensive re-examination of undergraduate studies at Harvard. He identifies as the first standard for undergraduate education the following: "An educated person must be able to think and write clearly and effectively. Our students, when they receive their bachelor's degrees, must be able to communicate with precision, cogency and force." Former Commissioner of Education, Ted Bell, made the same point by posing some questions which, if one can answer them affirmatively, are indicators of being an educated person. Commissioner Bell asked: "Are you able to say what you think—say it easily and understandably? Can you express your thoughts and ideas in writing so others can understand clearly? Can you listen to others and understand their thoughts? In today's world we must be literate and verbally articulate. There is no greater asset than to be able to listen to others and to be sensitive to the ideas they express and in turn be able to express your own ideas in an understandable way. To express one's thinking and be understood is vital to almost everything." I most emphatically agree that the ability to communicate is a central goal of liberal arts education, a vital skill for life and the mark of an educated person.

I am by profession a lawyer, a legislator and a politician. The effective use of words is essential in my job. I would like to share with you today some of the ways in which the English language is used and abused in politics.

LEGISLATIVE LANGUAGE

First, words are the raw material from which legislators craft the laws. As a sculptor works in stone or clay, the legislator works in words. For example, words of legislative art and artifice can be used to bridge policy differences and disagreements. The declaration of policy of Title I of the elementary and secondary education act states: "The Congress hereby declares it to be the policy of the United States to provide financial assistance to local educational agencies serving areas with concentrations of children from low-income families to expand and improve their educational programs . . . which contribute particularly to meeting the special educational needs of educationally deprived children." That passage certainly lacks literary elegance. But if you listened to it very carefully, you might have discerned that the law blends together quite skillfully three quite distinct goals:

(1) "Financial assistance to local educational agencies," (2) improvement of educational programs and (3) serving "the special educational needs of educationally deprived children." I can personally attest to the great care and craftsmanship that went into balancing the phrases in that sentence and which helped open the way for a major Federal commitment to supporting elementary and secondary education.

A negative example—a case where the sloppy use of language brought us to grief—is the 1964 Tonkin Gulf resolution. It read in part: "The Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression." It was adopted unanimously by the House and with only two dissenting votes in the Senate. What seemed like a vote of confidence in the President's handling of a particular naval incident became a legal justification for the Vietnam War. We should have been alert to the dangers inherent in the broad and sweeping words of the legislation, but we ignored them to our great sorrow and shame.

THE LANGUAGE OF STATESMEN

The use of language in politics obviously extends far beyond the drafting of legislation. The eloquence of our great statesmen has inspired the nation and called forth its maximum energies in times of crisis. Franklin Roosevelt rallied the spirit of a nation suffering its worst economic depression by reminding us that "we have nothing to fear but fear itself." Winston Churchill stiffened the resolve of all those opposed to fascism when he said, "I would say to the House, as I said to those who have joined this government, 'I have nothing to offer but blood, toil, tears and sweat.'" John Kennedy reawakened the idealism of America when he said, "Ask not what your country can do for you, but what you can do for your country."

EMPTY RHETORIC

While political rhetoric can be a beacon of our ideals, it can also be a cloud and a miasma that shrouds the truth. It can be simply pompous verbiage that replaces substance with pieties. Take for example this political nominating speech:

"History will record the greatness of his administration. As it is inscribed upon the permanent page, so it is etched in the minds and hearts of a grateful people."

"But his warmth and compassion and sense of justice are implicit in the entire range of his record in public life."

"Mr. Chairman, I proudly rise tonight to confirm a commitment that was wrought in the crucible of another era."

"It is the worst of times that calls for the best in men."

"Destiny has again marked this man. A man to match our mountains and our plains. A man steeped in the glorious traditions of the past. A man with a vision of the unlimited possibilities of a new era."

Would you vote for this man after those words?

SEMANTIC EVASION

Or, language in politics can be deliberately evasive. Watergate gave us a new lexicon of terms—"deniability," "inoperative" statements, "stonewalling," modified limited "hang out" and, most recently, "A legal cover up." The terms themselves are vulgar and crude, illustrating once again the "banality of evil." But what those words stood for is even worse—deliberately misleading and deceiving the listener through semantic juggling. The manipulative use of language was designed to leave us all "twisting slowly in the wind."

POLITICAL EUPHEMISMS

Words in politics can be euphemisms, shading our sensibilities from the harsh realities that lie behind them. The "final solution of the Jewish question" means mass

extermination in death camps. "Pacification" was napalm bombs; a "protective reaction" was an air strike; and "local control" was often a polite code word for segregation and racism.

EMPTY SYMBOLS

Words in the political arena often become empty symbols—emblazoned on banners, shouted through megaphones, painted on walls and writ large in headlines—but devoid of meaning. The French philosopher Simone Weil expressed this point very well:

"The Greeks and Trojans massacred one another for ten years on account of Helen [of Troy.] Not one of them except the dilettante warrior Paris cared . . . about her; all of them agreed in wishing she had never been born. The person of Helen was so obviously out of scale with this gigantic struggle that in the eyes of all she was no more than the symbol of what was really at stake; but the real issue was never defined by anyone, nor could it be, because it did not exist. . . . For our contemporaries the role of Helen is played by words with capital letters. If we grasp one of these words, all swollen with blood and tears, and squeeze it, we find it is empty." Empty symbols and slogans like "peace with honor" or "power to the people" can be like the sirens of Greek mythology luring the unwary to their destruction.

POLITICAL WIT

I should not leave this topic of politics and the English language without pointing to the richness of political language in wit and humor. The barbed retort and the skillful verbal sally often pierce through deception and capture the essence of a person or an issue. President Kennedy, well known for his wit, asked party Chairman Khrushchev what the medal Khrushchev wore was. The Soviet leader replied it was the Lenin Peace Prize Medal. "Let's hope you keep it," Kennedy drily remarked.

During the 1956 Presidential campaign, the Democratic candidate for President, Adlai Stevenson, was asked to characterize the foreign policy of then Secretary of State John Foster Dulles. Stevenson replied that Dulles' foreign policy reminded him of the Australian bushman who got a new boomerang and then spent the next year trying to throw the old one away.

During the 1968 Presidential primaries Senator McCarthy, one of the sharpest wits in politics, was challenging President Johnson for the Democratic Party nomination. He was asked if he felt a groundswell of support for his candidacy in New Hampshire. "No," he said, "it feels more like a frost heave." Senator McCarthy also gave a devastatingly accurate characterization of one of his more pusillanimous Senate colleagues. McCarthy said of the other Senator, "he is a great fellow; but you can always tell when the battle is won, because the Senator is one of the first to come down the hills to help shoot the wounded."

One of my most staunchly conservative colleagues in the House was known as the "abominable no-man" and a particularly devious and dangerous opponent became "the smiling cobra."

I believe that politics is a respectable, indeed even a noble, calling. But its nobility in a democratic society depends on a citizenry that holds politicians accountable and does not let them slip by with verbal trickery. It also depends on citizens who can articulate their concerns with clarity and force. As citizens educated in the liberal arts who will be participating in the democratic process, I hope you will weigh the words you hear and say carefully—brushing aside pomposity and empty rhetoric, looking behind grand symbols and polite euphemisms and comprehending the reality of our ideals, our problems and our public policies.

I hope I have added a useful footnote to your liberal arts education today. Good luck and Godspeed. Thank you.

STATEMENT OF CONGRESSMAN JOSEPH L. FISHER ON BILL TO MODIFY CREDIT FOR THE ELDERLY BY ELIMINATING INCOME CEILING AND JOINT RETURN FILING REQUIREMENT

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. FISHER. Mr. Speaker, although I supported the reform measures adopted in the Tax Reform Act of 1976, I did so despite my opposition to two provisions which adversely affected elderly persons living on a fixed income. The first provision involved changes in the "sick-pay" exclusion, which is no longer available to many disabled retirees. I have offered legislation to correct this problem and the Congress has now delayed the effect of this provision for one year. The second provision dealt with the new restrictions placed upon availability of the "credit for the elderly." Fortunately, a provision in the President's economic stimulus package will allow taxpayers to file an amended return for 1976 in order to elect the retirement income credit under old law or the new credit for the elderly, whichever results in less taxes. However, for years after 1976 the new credit for the elderly, if left unchanged, will mean a significantly higher income tax bill for many retired people.

The credit works in the following way. An eligible taxpayer can subtract from taxes owed 15 percent of up to $2,500 of retirement income. Last year's bill increased the amount of retirement income eligible for the credit and expanded the list of eligible income items. Unfortunately, a number of limitations were imposed upon availability of the credit: The credit is phased out as income increases and married taxpayers 65 and over may claim only if they file a joint return.

The retirement income credit is intended to insure equal treatment between civil service retirees, whose annuity payments are partially taxable, and soical security recipients, whose payments are not taxed at all. The new credit for the elderly departs from this principle. It eliminates the credit for the elderly departs from this principle. It eliminates the credit for retirees whose adjusted gross income exceeds a certain figure—$12,500 for single taxpayers and $17,500 for married couples filing jointly—even though social security recipients with the same adjusted gross income continue to receive the entire amount of their payments tax free.

In addition on income ceiling discriminates against residents of high cost-of-living areas, such as northern Virginia. While an income of $12,500 for a single person and $17,500 for a married couple may be sufficient to enable an individual or couple to maintain a relatively high standard of living in certain regions of the country, this clearly is not the case in areas where the cost of living is above the national average.

There are several other objectionable features of the new "credit for the elderly." It retains the provision of old law that makes retirees from Government eligible for the credit at retirement regardless of age. Non-government retirees must be 65 to be eligible. But conditions that must be satisfied in order to qualify for the credit are now different for those under age 65 than for those 65 and over. For example, the limitations on the credit based on adjusted gross income applies to taxpayers 65 and over, but not to those under age 65. However, a phase-out of the credit based upon earned income exists for those under age 65, but not for those over 65. This double standard can produce anomalous results. For instance, the stricter ceiling on income for those over 65 will mean in some cases that the 65th birthday brings a tax increase of up to $375 for a single taxpayer and $562 for a married couple. This is totally unwarranted and should be changed.

The new provision imposes the requirement that a joint return must be filed by a married couple in order to claim the credit. This requirement increases the so-called "marriage penalty" that exists under current law. For example, an unmarried couple age 65 and over may have a combined adjusted gross income of up to $25,000 and still claim a portion of the credit for the elderly, while a married couple of the same age will be foreclosed from claiming any portion of the credit when their adjusted gross income reaches $17,500. Furthermore, since social security payments reduce the amount of retirement income eligible for the credit, the joint return filing requirement can prevent a married taxpayer 65 and over from claiming the credit simply because of the social security payments received by his spouse. Yet this result would not occur if the couple were unmarried. It seems to me that the tax laws should be moving in the direction of reducing the marriage penalty, rather than increasing it.

For these reasons, Mr. Speaker, today I am introducing a bill to correct the defects in the new provision and make the credit more universally available to elderly taxpayers. My bill adopts the broader definition of retirement income provided for under the Tax Reform Act, but establishes a more uniform standard for determining a taxpayer's eligibility for the credit. Under my bill, the "credit for the elderly" would be revised by making the following changes:

The sum of $2,500 of a taxpayer's retirement income would be eligible for the credit.

Each taxpayer would be eligible to claim the credit of 15 percent of up to $2,500 of retirement income—credit of $375 per taxpayer—without regard to marital status—that is—a married couple where each spouse has $2,500 of retirement income would be able to claim a credit of $750.

Both the income ceiling and the joint return filing requirement would be repealed.

The amount of a taxpayer's retirement income eligible for the credit is reduced by two categories of income: First, social security and other exempt pension in-

come; and secondly, by the amount of a taxpayer's earned income in excess of $2,500.

For the reasons I have set forth, I would urge the Committee on Ways and Means to set my proposal down for a hearing and subsequently to report it favorably to the House for approval.

TRIBUTE TO DR. BERTIE B. BURROWES, M.D., OF YOUNGSTOWN, OHIO

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. CARNEY. Mr. Speaker, I would like to take a few moments to pay tribute to a very distinguished citizen of my congressional district—Dr. Bertie B. Burrowes of Youngstown, Ohio.

Born in Kingston, Jamaica, Dr. Bertie B. Burrowes was an only child and an orphan who was raised by his grandmother. Fortunately, his grandmother recognized his intelligence and character. After he graduated from high school in Jamaica, she arranged for him to join his relatives in New York. Once in the United States, he seized upon his opportunities and worked very hard to attain his goal, which was to be a physician. He received his bachelor's degree in 1934, and his medical degree in 1937, from Howard University in Washington, D.C. He then served an internship at Freedman's Hospital in Washington, D.C., and a 1-year residency at Trinity Hospital in Detroit, Mich.

In 1939, Dr. Burrowes moved to Youngstown at the request of relatives. He became a naturalized American citizen and embarked on a distinguished career as a physician and community leader. He set up practice at 529 North Avenue in Youngstown, and, despite a rapidly growing general practice, he has remained at the same location ever since.

Highly respected by his peers in the medical profession, Dr. Burrowes has served for many years on the staff of the Youngstown Hospital Association and on the courtesy staff of St. Elizabeth Hospital Medical Center. Soon after his arrival in Youngstown, Dr. Burrowes assisted the Junior Civic League in establishing a well child clinic at McGuffey Centre; he has been the physician in charge and a member of the board at the McGuffey Centre ever since it opened in 1941. He also gives the Boy Scouts at McGuffey their annual physical examinations.

Dr. Burrowes' numerous activities include member of the board of the Youngstown Committee on Alcoholism, the Mahoning Chapter of the American Red Cross, the Child Guidance Center, the Youngstown State University Board of Trustees, and the Youngstown Park and Recreation Commission. In addition, he is a member of the national, State, and county medical societies, the American Academy of General Practice, the NAACP, the YMCA, Omega Psi Phi Fraternity, St. Augustine's Episcopal Church, Buckeye Lodge of the Elks, No. 73, Past Exhalted Rulers Council of the Elks, and director of the health department of the Ohio State Association of Elks. He also serves as an editor of The Buckeye Review, and he has served as physician for the Youngstown Police Department. His hobbies are bowling and bridge.

Among the honors bestowed on Dr. Burrowes are the humanitarian award from the Youngstown Chapter of the Negro Business and Professional Women's Clubs, and an honorary life membership from the McGuffey Centre. His latest honor came from Youngstown State University. The YSU board of trustees unanimously passed a resolution praising him for his loyal and faithful service, and for contributing so much of his time and energy to the advancement of the university. The resolution will be engraved on a plaque for formal presentation to Dr. Burrowes. On May 29, 1977, a testimonial banquet will be held for Dr. Burrowes at the Mahoning Country Club in recognition of his many years of dedicated service to the community. A committee of friends and admirers, headed by Dr. Earnest Perry and Mr. Lehman E. Black, is making arrangements for the banquet.

Dr. Burrowes is married to the former Thelma K. Lovelle of Greenville, Pa. Mrs. Burrowes is a registered nurse who still serves parttime at South Side Hospital. Dr. and Mrs. Burrowes have two daughters, Mrs. Olive Jones, a music teacher and conductor in Washington, D.C., and Mrs. Cynthia Hickman, a businesswoman with IBM in Columbus, Ohio, and three grandchildren.

Mr. Speaker, I could speak for a long time about Dr. Burrowes' personal qualities and virtues. He is a good and decent human being, who has given himself unselfishly on behalf of his fellow man. He is respected and loved by everyone who knows him. He is a distinguished physician and an outstanding community leader. He is a man who has sought and achieved excellence in his endeavors, but he is a man who still possesses the virtue of humility. I heartily congratulate Dr. Bertie B. Burrowes for all his fine accomplishments. We are most fortunate to have Dr. and Mrs. Burrowes as members of our community. I wish them, their children and their grandchildren good health, success, and happiness in the future.

THE OSHA OCTOPUS

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. FISH. Mr. Speaker, "Caution, if you think OSHA is a small town in Wisconsin—you're in trouble". At least that is what a sign warns at the office of an offshore diving contractor. Yesterday's Washington Post, in a bylined article by Thomas O'Toole, describes just how much trouble our Nation's effort to explore expeditiously for offshore oil and gas will be in if the supporters of OSHA have their way.

There are approximately 500 commercial divers engaged in oil and gas operations on the Outer Continental Shelf. These well trained and hardy souls average $35,000 per year. The diver who testified to this figure before the ad hoc Select Committee on the Outer Continental Shelf says he himself makes between $60,000 and $70,000; others make even more. They are well compensated for the risks they take.

The industry's own self-imposed regulations are so strict that there have only been one or two deaths per year. Tragic as these deaths are, they represent a better record than the fatality rate for Federal Government civilian workers, including you and me. OSHA partisans, however, would like to see that Agency replace the Coast Guard as the lead agency for safety regulations on the Outer Continental Shelf. They want to create an adversary situation where none presently exists and impose industrywide regulations on these well paid personnel.

OSHA and the Coast Guard have recently negotiated a memorandum of understanding, to be effective this summer, which provides for a single set of basic regulations, with Coast Guard enforcing offshore, and OSHA in inland waters, harbors, et cetera. I am not sure these regulations are necessary. They would do little to improve diving safety In fact, most of the deaths were due to human error, in violation of the industry rules, and would have happened even if an OSHA inspector were qualified to swim alongside. The cost of these regulations, which may be more than the industry grosses in a year, will be passed on to the consumer of oil and gas.

To legislate OSHA as lead agency in offshore areas, however, will completely overturn the memorandum of understanding before it has a chance to work. It will put desk-bound OSHA bureaucrats in charge of deep sea divers, instead of Coast Guard experts in the marine environment. If you were a diver, Mr. Speaker, which would you prefer?

The article follows:

DEEP-SEA DIVERS TRY TO "DEEP SIX" U.S. REGULATIONS

(By Thomas O'Toole)

HOUMA, La.—There's a black-and-yellow sign on the door of Tom Angel's office at the Santa Fe Diving Co. that says succinctly: "Caution. If you think OSHA is a small town in Wisconsin—you're in trouble."

The same sign can be found on the doors and desks of the people who run a dozen commercial diving firms like Santa Fe, whose shops and offices are 60 miles south of New Orleans on the way to the oil rigs and pipelines in the Gulf of Mexico.

The signs are at Sub Sea International in downtown New Orleans and at Taylor Diving & Salvage across the Mississippi River in suburban Belle Chasse. They're 400 miles west at Ocean Systems in Houston and 600 miles east at Logan Diving in Jacksonville.

"We keep these signs around to remind us that OSHA says we have to guarantee a safe workplace," said Angel, who manages 70 divers doing repair and construction work on the floor of the Gulf of Mexico. "Now our workplace is the bottom of the sea and I ask you how in the hell you can guarantee safety on the bottom of the sea."

OSHA, of course, is not a small town in Wisconsin but the Occupational Safety and Health Administration, a branch of the Labor Department created by Congress to watchdog safety in American industry. Only six years old, OSHA now has 2,500 people on its payroll. More than half carry the title "Inspector" to their jobs, which is to enforce safety at 5 million workplaces employing 65 million Americans.

OSHA and the country's commercial diving contractors are locking horns over safety standards for divers.

OSHA thinks commercial diving can be made safer through regulation. The divers believe diving is inherently dangerous, that you can't make it any safer than they've made it and that attempts to regulate it can only ruin it.

There's no question diving is risky. Divers say about half have lost fingers through careless handling of knives or the strong nylon ropes they use underwater. Many divers are hard of hearing. That's because of eardrum damage caused by constant pressure changes divers undergo moving up and down in their workplace.

But divers say the undersea is not as hazardous as the public thinks it is. No commercial diver has ever been killed by a shark, for instance. Barracudas are considered more dangerous, but only because they're more curious than sharks. They're also easier to scare away.

The major marine life danger to divers is the grouper, the huge and clumsy bottom dweller whose lack of teeth and wisdom make it take in everything along the sea floor for food. One diver was sucked in from the bottom of the Gulf of Mexico last summer until he was in the grouper's mouth up to his chest.

"He hit him on the nose, he pulled on his line, and his topside tender pulled on his line," recalls Taylor Diving's James Eberle, who would not identify the other diver. "The grouper finally spit the diver out and let me tell you it was a couple of days before that diver went back to sea."

OSHA has tried for almost two years now to set safety standards for the diving industry, which has never been regulated. So far, the fight has not gone OSHA's way.

Most recently, OSHA lost a federal court test over the emergency diving safety standard it set, one that diving contractors say is not needed and is too expensive. According to the Council on Wage and Price Stability, the emergency standard could cost the diving industry from $33 million to $100 million a year. The latter figure is more than the industry grosses annually.

The wage and price council's $33 million number is its estimate of what it would cost the diving industry to prevent two diver deaths a year, or about $16 million a life. In the most recent study on the subject, the Coast Guard suggested the value of a human life to be set at $370,000 for the purpose of setting standards.

The divers' battle began two summers ago when the United Brotherhood of Carpenters and Joiners petitioned OSHA to set the emergency standard because safety conditions in the Gulf of Mexico—where 90 percent of the commercial deep-sea diving is done—had become "abominable."

It should be pointed out that the carpenters' Washington office is next door to the new Labor Department building, where OSHA is housed. It should also be pointed out that the gulf has largely been closed to the carpenter union, which represents many inland water divers because of its 50-year connection with pile drivers and bridge builders.

One of the more than 20 contractors diving in the gulf, the carpenters have won the right through elections to represent two, Ocean Systems in Houston and the J. Ray McDermott diving Division near New Orleans. Neither firm has signed a contract with the union, which claims it represents as many as 700 divers in the gulf. The contractors say there aren't 700 divers in the United States, much less in the Gulf of Mexico.

"If the carpenters say they've got 700 gulf divers in their union that means they've got 700 guys with union cards that say they're divers," said Santa Fe Diving's Tom Angel.

The number of commercial divers is important to the issue of whether the industry should be regulated. The carpenters say there are 2,300 commercial divers in the United States, a statistic OSHA is using. The diving contractors say there are no more than 600 commercial divers, working, in the United States, meaning the industry is too small to regulate.

The contractors claim the carpenters and OSHA have counted divers they employ in the North Sea and the Persian Gulf.

OSHA counted divers listed in many cities' Yellow Pages, the contractors also say. "They've got at least 400 divers in their tally who dive on weekends and in their spare time for nickels and dimes," Angel said.

Central to the issue of diver regulation is safety, which is in hotter dispute than the divers' numbers.

OSHA took statistics from the carpenters union that said there were more than 20 deaths and 60 serious injuries among divers in the Gulf of Mexico in the last seven years. The contractors challenge those numbers, saying the carpenters tallied diver accidents the way Chicago's aldermen used to count votes.

Angel said he saw the name of a diver working for him listed three times on the accident sheet, each time with his name misspelled. Taylor Diving's president, Ken Wallace, said the carpenters listed the death of a diver who still works for Taylor. The carpenters deny they juggled names.

OSHA is also using underwater accident figures compiled by the University of Rhode Island's John McAniff, who has studied diving hazards with a grant from the National Oceanic and Atmospheric Administration. McAniff found 41 underwater deaths in the last seven years, including six offshore—five in the Gulf of Mexico and one in the Santa Barbara Channel.

Commercial diving contractors dispute 16 deaths on the list, saying divers for treasure, abalone, seaweed and black coral are not commercial divers and shouldn't be counted.

Taylor Diving has lost five divers in 20 years, one struck in the head by a tree being carried down the Mississippi River and another sucked into a pump on a dredging job.

A third was caught by a wire that cut off his air supply; he panicked, tore his helmet off and drowned trying to reach the surface.

The most recent fatality in the gulf involved a diver being brought up slowly in a diving bell to avoid decompression effects. Exhausted, he asked if he could turn off the diving bell light so he could sleep. He was told not to extinguish the light, so he put his shirt over the light to dim it. The shirt caught fire, which raced through the pressurized bell and burned up all the oxygen in seconds. The diver died from seared lungs.

Divers in the gulf are well compensated for taking risks, which might explain why they're hesitant to be unionized or regulated. They are paid by the foot in the depths they dive. Taylor employed 17 divers last year who made more than $60,000, five who made over $70,000, six who topped $80,000, and three more than $90,000. Taylor's top diver last year made $96,000 for about nine months' work.

The fight between OSHA and the diving contractors will intensify in the next few weeks. Hearings are being held by the House Select Committee on the Outer Continental Shelf to decide whether to give OSHA jurisdiction with the Coast Guard over offshore diving. At the same time, OSHA and the Coast Guard have been told to write by July 1 the first legal safety standard governing commercial diving.

If the new standard is anything like the emergency standard OSHA came up with nine months ago, it, too, could wind up in court.

OSHA did not help its case the way it wrote the emergency standard. It wanted divers autopsied at death so doctors could study the effects of diving on their bones. It wanted a paramedic diver standing topside in a suit to help a diver in trouble. It wanted backup radios to communicate with divers in the water and backup instruments to monitor every step the diver took along the ocean bottom.

So many new instruments were recommended by OSHA as standard diving gear that the Navy satirized it in its magazine Faceplate. The Navy said the OSHA diver would weigh 1,000 pounds by the time he went under water.

END OF AN ERA

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BYRON. Mr. Speaker, what is described as the "end of an era" is coming about in Williamsport, Md., my hometown. A close friend of mine, and of everyone in Washington County is about to close a long and distinguished career.

Richard Doub is retiring after 46 years of teaching and coaching in Williamsport schools. A lifelong resident of the county, Mr. Doub leaves behind him an outstanding legacy. To his students of mathematics and history, he offered knowledge and inspiration. As a coach, his record may never be equaled; his teams have won more than 500 games in three sports.

Richard Doub, in his 68 years, has been a major force and friend to his town and his county. I join with all Washington Countians in saying to Richard, congratulations and thanks for a job well done. To share more of the qualities of this man with my colleagues in the U.S. House of Representatives, I offer this article by Barb Blass as it appeared in the Morning Herald newspaper in Hagerstown:

RICHARD DOUB—END OF AN "ERA"

(By Barb Blass)

"I've done what I really wanted to do. I don't think a lot of people can say that."

Richard Doub will be retiring this spring after his long teaching and coaching career at Williamsport.

Retiring might be the only thing he really doesn't want to do. But he figures it's time.

"Each year things bother you more," says the 68-year-old soft-spoken educator. "I want to quit before I crack up."

Those words seem a little strong for a man who admits "leading a sheltered life" in the classroom. Because he's almost always taught elective or college preparatory classes, discipline has not been a major problem for him.

Doub began preparing for retirement five years ago when he turned over the baseball coaching duties to Larry Wadel. Stan Stouffer became the head soccer coach last fall after serving as Doub's assistant.

"If I'd given up everything at once, it would

be a big letdown," says Doub, who retained his athletic directorship this year.

Doub's coaching record may never be topped in Washington County. His teams have won more than 500 games in three sports, including 217 in soccer and 200 in baseball. He posted a 217–72–28 soccer record during 32 years and a 200–65 baseball record during 29 years. He also coached boys and girls basketball for 10 years, ending in 1953.

Doub was born in a farmhouse not far from the present Williamsport High School. And he lived there until five years ago.

When he was growing up he didn't have much time for sports; his energies primarily were directed at farming. He made up his mind early that he didn't want to be a farmer.

"There were three boys in the family," says Doub. "We decided we didn't want to farm. And the best way not to do that was to go to college."

He and his younger brother, Charles, enrolled at Gettysburg College. And a couple years later, in 1929, Richard Doub became a member of the college's first soccer team. Doub still wears his black and orange letter sweater on occasion.

When Doub got his sheepskin from Gettysburg in 1931, the country was smack-dab in the middle of the Great Depression. Jobs were sparse.

He wanted to teach and coach in high school. He wanted to emulate Williamsport coach and teacher Ralph Beachley. But the only job he could find was teaching seventh and eighth grade math and science at the "elementary" school in Williamsport. His pay was $1,200—a year. The next year his salary dropped $50.

It wasn't until 1939—eight years later—that Doub got his wish. He became the high school soccer and baseball coach, taking over from Paul Barnhart. He also taught history and physical education.

"I had never really played baseball," says Doub, whose favorite participation sport until 1959 was fast-pitch softball.

"I was just fortunate we won. Friends like Boots Poffenberger (a major league player of the day) helped quite a bit," he says.

Doub recalls having Poffenberger demonstrate aspects of the game to his team. He admits learning a lot himself from the demonstrations.

With the opening of the "new" high school in 1939 (the red brick building is now part of the middle school), came Williamsport's first gymnasium.

So, Doub became the basketball coach. Williamsport lost its first boys varsity basketball game to the Marlowe (W. Va.) ninth and 10th grade team, 25–24.

Doub was the boys and girls basketball, soccer and baseball coach until a few months after Pearl Harbor.

His teaching and coaching career at Williamsport was interrupted for four years during World War II.

Doub enlisted in the Army Air Corps in April 1942 at the age of 31. The United States would up the draft age to 35 soon. So Doub, unmarried at the time, signed up. The recruit sergeant "sort of promised" Doub that he would be able to attend meteorology school.

"Enlisting was a matter of pride," Doub says. "I was too proud to think that Uncle Sam would have to force me to serve the country."

Doub never was in combat. He spent three of those four years teaching such things as meteorology, physical education and navigation.

While he was in Miami Beach, Fla. for Officer's Training School, he met actor Clark Gable. Gable was in his early 40s when he enlisted. "They were willing to give him a direct commission," recalls Doub. "But he wanted to earn it."

Doub, who had several occasions to talk with Gable, says the actor was "depressed."

Gable wanted to be a tailgunner on a bomber, but the army wouldn't allow it because of his age.

Later, while serving in San Angelo, Texas, Doub met his future wife, Imogene.

Doub had a penchant for sending and receiving mail while in the service. At one time, he recalls, he was corresponding with 75 different people. He and his wife still keep in touch with many of the same people, although his letter-writing has tapered off markedly.

Doub returned to Williamsport in 1942 after being discharged from the service.

He picked up where he'd left off.

His teams were highly successful. The soccer team won the "Class D" state title in 1946 and 1947 and was runner-up in 1948. The soccer play-offs were discontinued the following year and weren't revived until the 70's.

His boys basketball team captured the state crown in 1948 and the girls team won the title in 1949. For many years girls basketball tournaments were non-existent.

Doub believes that Jack Molesworth, the executive secretary of the state association which controls high school athletics, has had a great deal to do with the resurgence of play-offs in several sports.

"He's really all-out for playoffs," says Doub.

The importance of athletics versus education was also in question. "Principals and superintendents complained that kids were getting out of school too much to participate in sports.

"Now, kids get out of school for all kinds of things," he says.

Doub is proud to point out the variety of sports at Williamsport. "We have offered as many or more opportunities as any high school in the county," says Doub.

"I'm glad we do. They say you might be spreading yourself thin," he says. "But the important thing is to give the boys and girls a choice."

As athletic director, he is also proud that Williamsport's athletic budget has remained in the black, even though several non-revenue producing sports have been added.

"We spend all we have and we don't spend any more" he says, giving a lot of credit to the principal Joe Scott for being so "ultra conservative."

"It was as tough for me to get new baseball uniforms as it was for Mr. Smith to get new basketball uniforms," he added, referring to recently-retired basketball coach Glenn Smith.

But Doub also believes schools will need financial help to keep up with the increased interest in sports. "If the program is worthwhile, the taxpayers are going to have to pick up the bill," he admonishes.

Doub doesn't really remember when he became athletic director. He's just done it for a long time. Athletic directors don't receive any renumeration for their jobs, only time off. And the time off, many times, doesn't have any correlation with the actual hours spent making arrangements for events and seeing that they come off as planned.

It wasn't until six years ago that the county coaches were paid for the extra duties. Doub believes that it won't be too long before athletic directors will be paid for their services.

While he was coaching, he was still busy in the classroom teaching history and mathematics. He felt at home in the classroom. "The life of an administrator is short," he says.

Except for the first teaching job, when he had 59 seventh and eighth graders of various learning interests, Doub figures he's been lucky with the type of students who have crossed his path.

"I just haven't been exposed to characters who were forced to stay in school because of their age," says Doub.

In 1960 Doub began teaching psychology, an elective for seniors. "They don't have to take it, they want to take it," he says of the course he still teaches.

Doub's greatest satisfaction in teaching has been "realizing that many I taught appreciate what I have done." And in coaching? "The good athletes and the good seasons."

"Everyone would be depressed without a satisfying experience. Getting a check is satisfying. You need the check. But the other experiences are more satisfying."

Doub plans to do a lot of traveling, continue playing tennis and "learn to fish" when he retires.

And he'll be free from responsibilities, giving him more time to watch Williamsport's athletic teams.

He's sure to become the Wildcats' No. 1 fan.

SEPARATE VIEWS OF REPRESENTATIVES SAMUEL L. DEVINE, JAMES T. BROYHILL, ROBERT KRUEGER, TIM LEE CARTER, CLARENCE J. BROWN, JAMES M. COLLINS, NORMAN F. LENT, EDWARD R. MADIGAN, W. HENSON MOORE, AND DAVE STOCKMAN ON H.R. 3816—FTC ACT AMENDMENTS OF 1977.

HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. BROYHILL. Mr. Speaker, we believe that this legislation should not be enacted in its present form for a variety of reasons. First, H.R. 3816 contains not only the authorization for the Federal Trade Commission, but also some very substantial amendments to the FTC Act. Because of the self-discipline imposed by the Budget Act's requirements, time is of the essence with respect to committee consideration of legislation extending authorizations. As is discussed below, combining the authorization with these substantive amendments to the FTC Act has resulted in haphazard and hurried consideration of the changes being proposed. We submit that this is not a wise way to legislate.

Hearings were called and held within 2 weeks after the bill was introduced. During those hearings, issues of great significance were merely touched on if they were discussed at all. For example, in reviewing the hearing record, we find very little discussion of the class action issue, especially the fluid recovery concept which was so controversial when Congress considered the issue in relation to the Hart-Scott-Rodino Antitrust Act (P.L. 94–435) in the 94th Congress. Indeed, the related provision in Hart-Scott-Rodino contains a number of safeguards against abuse not found in H.R. 3816.

Several witnesses, most notably the American Bar Association, pointed out that they had just not had enough time to review the complex issues involved, but offered to submit a more detailed statement as soon as an analysis of the bill could be performed. Unfortunately, because these amendments were tied to the authorization, we were not able to have the benefit of more complete comments from groups such as the American Bar Association.

The proponents refusal to separate the substantive provisions of the Act from

the authorization is most surprising in view of the fact that the other provisions are not of an emergency nature, and there is no good reason why we cannot examine these issues in detail and in a more leisurely fashion. One can only conclude that the supporters of this bill are concerned that the other provisions of the Act will not stand up to close scrutiny and, therefore, wish to rush these amendments through the legislative process. This is, of course, no way to legislate, and we are disappointed in our colleagues for choosing this route.

PENALTIES FOR NONCOMPLIANCE WITH COMPULSORY PROCESS

The bill contains a number of substantive issues which we do not believe merit enactment. For example, section 2 of the bill deals with penalties for noncompliance with Commission subpenas and orders requiring submission of information. Briefly stated, the bill would substantially increase the penalties for failure to comply with subpenas and orders while limiting the way in which the validity of the subpenas or orders could be challenged. This result would occur because the provision would: First, allow a court to assess penalties of up to $5,000 a day for failure to comply with FTC subpenas and orders; and second, prohibit a party from bringing suit to challenge an FTC subpena or order, until after receipt of a "notice of default" signalling the Commission's willingness to litigate the issue.

Although we support that portion of section 2 which significantly increases the penalties for noncompliance with subpenas and orders, we are concerned over the committee's decision to prohibit a party from bringing a suit challenging an FTC subpena or order prior to receipt of a notice of default. What this provision means is that a party wishing to challenge the validity of a subpena or order will have to wait, possibly for months, until the Commission in a notice of default indicates its intentions to proceed against that party, rather than being able to bring an immediate suit challenging the validity of the subpena.

The committee's decision to prohibit preenforcement review would reverse trends which have been established in a series of cases with *Abbott Laboratories* v. *Gardner*, 387 U.S. 136 (1967), in which the Supreme Court found that a case could be ripe for judicial disposition even though the case was brought in the context of a preenforcement suit.

In *A. O. Smith* v. *FTC*, 417 F.Supp. 1068 (D.Del. 1976), the Court of Appeals specifically found that a preenforcement challenge to an FTC order was properly brought. In related litigation, the U.S. District Court for the District of Columbia recently held that courts do have the discretion to determine whether such a case is properly brought or whether the issues should be determined in the context of an enforcement proceeding. (See *In Re FTC Line-of-Business Report Litigation*, Misc. No. 76-0127 (Jan. 21, 1977).) Also, the District Court in *Ford Motor Co.* v. *Coleman*, 402 F.Supp. 475 (D.D.C. 1975), stated that where the Government delays bringing an enforcement action, a preenforcement review suit can be properly brought, and should an enforcement suit later be filed, the two actions can be consolidated.

It is argued that it is necessary to prohibit preenforcement review, because in cases in which the Commission issues subpenas or orders against a number of different respondents, suits could be brought in a number of judicial districts, forcing on the Commission the inconvenience of litigating the same question in several different fora. Frankly, we are not convinced by this argument.

First, in reviewing the record we find that preenforcement suits are not being filed with great frequency. Further, we must point out that even under present provisions of the bill the Commission may find itself litigating in a number of different circuits, since the bill does not specify the fora in which applications for stays are to be filed. Finally, preenforcement suits could serve to expedite the process, since the issue of the validity of the subpena or order could be litigated at an early stage of the proceedings.

We are surprised that our colleagues are willing to cut off access to the courts in this manner, especially since both Congress and the judiciary have been making access to the Federal courts more and more easy. It is curious that in this one instance our colleagues are willing to foreclose access to the courts until after the Commission has decided to issue a notice of default. Frankly, this decision seems to run counter to recent developing trends in administrative law.

PROCEEDINGS TO ENFORCE COMPULSORY PROCESS

Section 3 would permit the Commission to bring a suit to enforce its compulsory process "within the jurisdiction of which the inquiry of the Commission is being carried on." The Commission would thus be able to sue a respondent anywhere in the country where the inquiry is being carried on, regardless of the location of convenience of the individual respondent. As a practical matter, most proceedings would be brought in the District of Columbia, the jurisdiction which is most convenient to the Federal Trade Commission.

The arbitrariness of this provision becomes even more apparent when it is compared to section 5, which would restrict the location of a respondent's appeal to a Commission order.

Under existing law, such a challenge may be brought where the person resides or carries on business. Section 5 of this bill would require that the action be brought in the court of appeals for the circuit where such person resides or maintains its principal place of business or the Court of Appeals for the District of Columbia.

Thus, it is evident that the Federal Trade Commission would retain the right to "forum shop" throughout the country, regardless of the convenience of fairness to the individual respondent. At the same time, it would not permit a respondent to engage in a similar practice seeking review of court of appeals of its choice, even though under current law, this is limited to a court of appeals for a circuit in which the respondent does business.

EFFECTIVE DATE OF CEASE-AND-DESIST ORDERS

Section 4 of the bill would amend section 5(g) of the FTC act to provide that Commission cease and desist orders become effective automatically 60 days after service, unless the Commission, a court of appeals, or the Supreme Court issues a stay. Presently, a respondent is provided with an automatic stay of an order until his time to appeal expires or, if an appeal is filed, until a court has reviewed the order.

If the Commission, pending such review, wishes to obtain a stay, it must make an application for that relief, making a showing as to why such extraordinary relief is necessary. Thus the amendment would shift the burden of maintaining the status quo during the pendency of an appeal to the party which would be subject to the order.

It has been stated that the bill would merely bring FTC practice into line with that of the other regulatory agenices. However, unlike the other agencies which regulate only a narrow line of commerce, under statutes and rules which cover specifically delineated practices and whose public interest mandate is not nearly so broad, the FTC regulates virtually every action which can affect competitors or consumers subject only to broadly construed jurisdictional and substantive requirements which empower the Commission to regulate "unfair" and "deceptive" acts or practices. Recent FTC proceedings, particularly in the consumer protection area, have sought the imposition of novel remedial orders in "test cases" based on new theories of liability. The orders issued by the FTC in many cases may apply to practices never previously prohibited, or may go well beyond the practices the respondent was actually found to have engaged in.

The severe economic impact which would result from the immediate effectiveness of FTC orders as provided for in H.R. 3816 is not limited to orders requiring divestiture or other structural relief, although such orders unquestionably merit stays pending judicial review. The trend of recent FTC orders is away from mere "cease-and-desist" orders to those containing affirmative disclosure, labeling, affirmation, restitution, and similar other provisions and the immediate enforcement of such orders could result in substantial harm. Thus, to require an order recipient to engage in corrective advertising while he is appealing the decision which found that remedy to be necessary would cause irrevocable injury by requiring him to "correct" statements which, upon review, may be found to have been proper.

The short answer to those who feel that the changes required in FTC practice by section 4 are necessary—a claim that was not documented during the hearings on this bill—is that the FTC already has the authority to seek immediate enforcement of the cease and desist portions of its order during the pendency of an appeal. The Commission, in 1973, was granted the authority to seek preliminary injunctions in cases where it has reason to believe that any law enforced by it is being violated and that an injunction is "in the public interest."

If the Commission is not willing or able to make this showing in an injunction action, it is difficult to understand why it should be entitled to the same result—and more—through the automatic operation of law which this amendment would require.

CONSUMER CLASS ACTIONS

Section 7 of the bill would permit a private right of action for violations of trade regulation rules or cease-and-desist orders. These suits to enforce the FTC Act could be brought in State courts or, if the plaintiff alleges damages in the aggregate of at least $25,000, in Federal courts. With respect to class action lawsuits, the bill sets out a scheme for providing notice of the suit to members of the class which is at odds with the requirements of rule 23 of the Federal Rules of Civil Procedure. Further, the bill would allow a court to estimate the damages suffered by the class as a whole, rather than compute damages for harm actually suffered by the members of the class.

We believe that section 7 should be deleted from any final legislation for a number of reasons. First, we believe that no need for the provision has been shown. The Federal Trade Commission now possesses an impressive arsenal of weapons which can be aimed at anyone who violates the act. For example, under existing law, the Commission can bring a suit on behalf of consumers injured by the violation of a rule or order—or the practices leading up to the order.

The kinds of redress which the court can impose include not only damages but also cancellation or rewriting of contracts, refund of money or return of property, or some form of public notice of the violation such as corrective advertising. The Commission can impose a fine of $10,000 a day for violations of rules or orders. The Commission can also levy a $10,000 fine against a company which engages in a practice prohibited by a cease-and-desist order issued against someone else. Further, the FTC has authority to seek injunctions whenever it believes that someone "is violating or is about to violate" the FTC Act. Finally, section 6 of this bill authorizes the Commission to seek appropriate equitable relief, including appointment of a trustee to prevent dissipation of assets, whenever the FTC believes the act is being violated or is about to be violated. This array of enforcement tools certainly gives the agency the ability to effectively deal with violators.

In addition to being unnecessary, a private right of action could lead to inconsistent and conflicting interpretations of the FTC Act. The courts have consistently refused to allow private citizens to bring suits to enforce the FTC Act. The need for uniform enforcement by the FTC of its own rules and orders is the principal reason underlying this policy. In determining whether to initiate an enforcement proceeding, the FTC must consider many factors which a private litigant could very well ignore, such as whether industrywide enforcement is preferable to case-by-case litigation, possible disruptive effects on commercial practices, and whether the public interest is served by a particular remedy. This point was made in *Holloway* v. *Bristol-Myers Corp.*, 485 F. 2d 981 (D.C. Cir., 1973), when the court, in rejecting a private right of action under the FTC Act, stated:

> Private litigants are not subject to the same constraints. They may institute piecemeal lawsuits, reflecting disparate concerns and not a coordinated enforcement program. The consequence would burden not only the defendants selected, but also the judicial system. It was to avoid such possibilities of lack of coherence that Congress focused on the FTC as an exclusive enforcement authority. (Id. at 997.)

We have seen no evidence in the record nor heard any arguments made which convince us that this policy now should be changed. Indeed, the only argument we have heard in favor of this provision is that the FTC lacks the resources to effectively enforce the act. If such a problem exists, and we do have our doubts, we are convinced that section 7 will only exacerbate this problem, since the Commission will be forced to intervene in the private actions filed in order to safeguard its own enforcement policies. The Court in Holloway pointed this out, saying:

> The effect of requiring the Commission to intervene whenever it felt that a private litigant might stray from its policies, impair its precedents, or disadvantageously compromise meritorious litigation makes it part hostage to private concerns, part competitor (in a race to the courthouse), and risks not only its resources but the extent of its contribution to the public interest. (Id. at 999.)

To require that the Commission use its limited resources to monitor and intervene in private actions brought in the many Federal and State courts across the country will certainly offset any assistance that these private suits might bring to FTC enforcement efforts.

We are reluctant to expand the use of the class action device in the consumer protection area without determining whether it provides a satisfactory remedy for consumer grievances. Before legislation is enacted in this area we believe that it is necessary to examine the class action as a remedial device compared to alternatives available such as small claims courts and consumer arbitration panels. However, in reviewing the hearing record, we find no such comparison. In practical terms, the class action may provide consumers with very little in the way of resolving legitimate consumer complaints.

First, class actions often take years to resolve. In the meantime, the aggrieved consumer goes without a remedy. Second, because the lawsuit might be litigated without notice to the aggrieved consumer and because damages may be assessed in a way that has little relationship to the actual individual harm suffered, the suit, once it is finally determined, may provide the individual consumer with no effective remedy. At best, the consumer will get only a fraction of any damages awarded returned to him and this after probably many years with the question before the court.

Proponents of the expanded use of class action lawsuits argue that the class action is needed to deter corporate wrongdoing. We disagree. The class action is not suitable for use against hardcore fraudulent operators and con artists, since the fraud involved will probably not be common to the entire class. Yet, this is the kind of practice against which the consumer needs the most protection. Instead, we are concerned that suits will be brought on the "deep-pocket" theory—proceeding against large and financially stable companies for highly technical violations of FTC rules or cease-and-desist orders.

Further, it should be obvious that a company cannot be deterred from engaging in a particular practice if the applicable legal standard is so vague and ambiguous that the company does not know whether a particular conduct is indeed illegal. Although the FTC has yet to issue a rule under the new procedures which we recently enacted in the Magnuson-Moss Act, we have reason to believe that these rules may be cast in extremely broad and sometimes unclear terms.

The FTC's rule abolishing the holder-in-due-course doctrine aptly illustrates why we are concerned in this regard. The holder-in-due-course rule became effective on May 14, 1976. It was immediately the source of much confusion, since it was unclear as to precisely what the rule meant and who the rule covered. A number of months elapsed before the Commission issued a statement attempting to clarify the meaning of the rule by setting out examples of situations to which the rule would apply.

Had H.R. 3816 then been law, lawsuits could have been brought against companies which had no way of knowing whether they were covered by the rule or not. Frankly, we cannot understand what purpose is to be served by subjecting a company to liability in such a case. Nevertheless, this is precisely what would happen, should H.R. 3816 be enacted in its present form.

Simply stated then, we do not believe that the class action device provides consumers with an effective remedy nor does it act as an effective deterrent to corporate wrongdoing. Indeed, we are concerned that the provision may have a "chilling effect" on a company's decisions to engage in product development and innovative marketing techniques. As has been pointed out by the commentators:

> Given the large liability class suits may threaten, such uncertainty could give rise to a dynamic encouraging class opponents to settle class suits or simply to forebear from all conduct even arguably prohibited. The ultimate effect, therefore, may be to exaggerate a remedial policy of deterrence to the point that a statute's effective scope is extended beyond its literal reach—in other words, overdeterrence. Developments in the Law-Class Actions, 89 Harvard Law Review 1319 at 1361 (1976).

The above comments are directed at the class action device in general. However, section 7 has a number of specific provisions which are especially troublesome. For example, a private action could be brought in State courts as well as in Federal courts. We strongly recommend

that any final legislation limit these suits to Federal courts.

The FTC Act and the applicable case law developed under it over the last 60 years are based on Federal standards and are enforced in Federal courts. We are concerned that State courts simply do not have the experience necessary to interpret the oftentimes vague and imprecise language of FTC rules and orders. Indeed, we can envision a situation in which a State court could interpret a rule in such a way as to completely negate its effect in a particular State. Although we recognize that many of our colleagues are disturbed about the FTC's ability to preempt longstanding State laws merely by issuing rules, we do not believe that this is the best way to deal with the problem.

Further, authorizing these suits in State courts could result in unfairness to the defendant, who could find himself not only litigating the same issue in several different States, but also having to do business in various States which may have interpreted the rule in different ways.

The notice provisions of section 7 are contrary to the present requirements of rule 23 of the Federal Rules of Civil Procedure. Rule 23, as interpreted by the Supreme Court in *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156, requires that if individual members of a class can be identified through reasonable means they must be individually notified of the lawsuit. When individual members cannot be identified, then notice may be by publication. The reason for this requirement should be apparent; since the class representatives are litigating issues on behalf of the entire class and since each member of the class will be bound by the court's decision, the class members must be given the opportunity to "opt out" of the lawsuit, thereby preserving their legal rights, should they so desire.

As pointed out by the Supreme Court, "each class member who can be identified through reasonable efforts must be notified that he may request exclusion from the action and thereby preserve his opportunity to press his claim separately or that he may remain in the class and perhaps participate in the management of the action." *Id.* at 176. Section 7, however, gives the court discretion to determine whether notice to the class will be by general publication or by individual notice to each class member. Further, the court can require that individual notice be given to a sample of members of the class or to a specific subclass, presumably with notice by publication to the other class members.

The bill then sets out a laundry list of items which the court is to consider in determining what kind of notice will be given. Frankly, we are troubled by the nature of the items which the court is directed to consider in this regard. We believe that they not only do not accurately state the policy considerations upon which rule 23 is based, but also raise questions as to whether the due process requirements of the Constitution have been met. For example, the court is directed to look at the "financial and other resources of the parties involved in such action" in determining what kind of notice will be given. We believe that this is an entirely improper consideration for the court to make. A finding that, for example, the plaintiff has few resources and is suing a defendant which happens to be a large and financially stable company, should have no place in the court's determination as to the type of notice which is to be given to the prospective class members. Similarly, a court is directed to consider whether a "significant percentage" of the members of the class could be expected to opt out of the lawsuit.

This provision, of course, raises questions as to what is a significant percentage as compared to an insignificant percentage. In our view, should the court determine that any of the members of the class if notified of the suit, would wish to opt out, then notice by publication would not suffice, should individual notice be possible.

Finally, section 7 contains an "aggregation of damages" provision under which damages could be awarded to the entire class, and not merely to those who can and have proved that they have suffered loss. This is the so-called "fluid recovery" concept and represents an attempt to skirt around those cases which have held that the need to prove individual damages often makes huge consumer class actions unmanageable. The drafter's desire not to have to deal with the question of manageability does not, however, justify ignoring the policy considerations behind and the constitutional underpinnings of rule 23.

It is a basic tenet of our legal system that in a civil action, the plaintiff must show that he suffered damage in a reasonably ascertainable amount before the defendant can be made to pay.

Section 7 would turn this principle inside out by allowing damages to be determined not on proof of actual injury but on surmise and speculation. The courts have consistently rejected this approach.

It is quite conceivable that the harm flowing from the defendant's conduct could vary considerably from consumer to consumer. A good example is a case involving deception advertising. Some consumers might not have purchased the article but for the advertising; others might have purchased different quantities of the article or a different model but for the ad. Some members of the class might not have been affected by the ad at all, while others might not have even seen the ad. In such a case, the various schemes for awarding damages set out in the bill would result in the collection of a sum of money which would have no relationship at all to the amount of harm suffered by the various members of the class. It is our view, and this view is well buttressed by applicable case law, that damages cannot be awarded unless there is individual proof both of the fact that the injury occurred and of the amount of the injury. This is precisely what section 7 would disregard.

Probably the best discussion of the problems inherent in this approach is found in Judge Medina's opinion in *Eisen* v. *Carlisle & Jacquelin*, 479 F. 2d. 1005 (2d Cir. 1973). Judge Medina stated:

> Even if amended Rule 23 could be read so as to permit any such fantastic procedure, the courts would have to reject it as an unconstitutional violation of the requirement of due process of law . . . We hold the "fluid recovery" concept and practice to be illegal, inadmissible as a solution of the manageability problems of class actions and wholly improper. *Id.* at 1017–18.

The fluid recovery concept has been described as a "judicial juggernaut" with Judge Duniway, of the ninth circuit, in a concurring opinion, stating:

> It is inconceivable to me that such a case can ever be tried, unless the court is willing to deprive each defendant of his undoubted right to have his claimed liability proved, not by presumptions or assumptions, but by facts, with the burden of proof upon the plaintiff or plaintiffs, and to offer evidence in his defense. The same applies, if he is found liable, to proof of the damage of each "plaintiff". *Kline* v. *Caldwell, Banker and Co.*, 508 F. 2d 226, 236 (9th Cir. 1974).

The fluid recovery concept was also rejected in the Hotel Telephone case as an unacceptable ploy to avoid the manageability problems from which large class actions often suffer. In that case, brought under the antitrust laws, the court stated that:

> The antitrust laws focus on the compensation of parties actually injured, presupposing that a plaintiff can prove that he was in fact injured. . . . The fact that the injured plaintiff is allowed treble damages does not change the basic nature of the private antitrust action as an action intended to compensate. When, as here, there is no realistic possibility that the class members will in fact receive compensation, then monolithic class actions raising mind boggling manageability problems should be rejected. *In Re Hotel Telephone Charges*, 500 F.2d 86, 89 (9th Cir. 1974).

Simply stated, the court rejected the notion that, in a private action, damages can be imposed when there is little chance that the damaged class will actually receive compensation. Section 7, however, explicitly recognizes not only that the damages imposed will have little relationship to the injury actually suffered but also that there may be no realistic way of compensating the individual class members. Section 7 states that unclaimed damages may be distributed for a public purpose. Presumably, if damages were computed on the basis of actual injury sustained, it would be the rare case where there would be any substantial unclaimed damages. By including this provision in section 7, the proponents seem to be recognizing that the damages collected bear no relationship to the injury sustained. To then require that this sum be put to a public purpose makes a travesty of the whole notion of a private civil action for damages.

Certainly this provision underscores the point that the real purpose of section 7 is not remedial but is instead punitive. However, the proponents' desire to punish those who violate FTC rules and orders does not justify ignoring settled legal principles. As stated by Judge Medina in Eisen III:

Statements about "disgorging" sums of money . . . or the "prophylactic" effect of making the wrongdoer suffer the pains of retribution . . . do little to solve specific legal problems. 479 F.2d at 1013.

If the real purpose of those who support section 7 is to punish the wrongdoer, then thought should be given to injunctions to stop the action coupled with substantial fines. However, we strongly believe that the scheme set out in section 7—that is, suits brought on behalf of an unidentified class who are not notified of the action, who may or may not have sustained injury and who in any event will not receive any individual redress—should be rejected.*

NONPROFIT ORGANIZATIONS

H.R. 3816, as introduced, contained a provision redefining the term "person, partnership, or corporation" to include "any legal entity." At the present time, the jurisdiction of the Commission is limited to profitmaking bodies. The effect of this provision would have been to extend the regulatory reach of the FTC to nonprofit organizations. The full committee deleted this provision and we fully concur in the committee's decision in this regard. In reviewing the record, we note that the FTC made a very weak case for extending its jurisdiction in this fashion. On the other hand, the nonprofit groups presented a very strong case in favor of deleting the provision. In our view, the FTC does not have jurisdiction over nonprofit organizations, nor should they. We are pleased that the committee agreed and chose not to extend the jurisdiction of the Commission.

The signature sheet follows:

SIGNATURE SHEET FOR SEPARATE VIEWS ON H.R. 3816—FTC ACT AMENDMENTS OF 1977

ROBERT KRUEGER, SAMUEL L. DEVINE, JAMES T. BROYHILL, TIM LEE CARTER, CLARENCE J. BROWN, JAMES M. COLLINS, NORMAN F. LENT, EDWARD R. MADIGAN, W. HENSON MOORE, DAVE STOCKMAN.

* It has been argued by proponents of this provision that cases such as *Bigelow* v. *RKO Radio Pictures, Inc.*, 327 U.S. 251 (1946), support the validity of the aggregation scheme set out in section 7 of the bill. We disagree. Bigelow says nothing about dispensing with the need to show individual injury. Instead, Bigelow and related cases support the proposition that once actual injury is proved, the plaintiff's burden to show the amount of damages can be met if damages are shown with reasonable reliability. This is, of course, an entirely different proposition than that presented in section 7 of H.R. 3816. Further, cases under the securities laws provide no precedent for this approach. Again, the fact of injury and the amount of injury are essential elements in determining damages.

FIVE DAYS IN RUSSIA

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1977

Mr. McDONALD. Mr. Speaker, during the last few months a debate has commenced over the scope of the civil defense effort in the U.S.S.R. Nearly all Soviet experts concede the effort to be a huge one. How efficient it is may never be known, but it will not be for lack of effort. A Newsweek article, in its May 23, 1977, issue, entitled "Russia's Bomb Shelters," appeared to be attempting to play down the Soviet effort. However, a group of American civil defense experts visited the Soviet Union in March of this year and I wish to call the attention of my colleagues to their findings as reported in the Journal of Civil Defense for May-June, 1977. It makes for sober reading. The article follows:

FIVE DAYS IN RUSSIA

(By J. Howard Proctor)

Seeing Russia in five days is something like trying to see the USA in two. You don't get to see Minsk or Pinsk just like you wouldn't get to see Chattanooga or Walla Walla in the States. For this reason the trip, as fascinating and revealing as it was, was hardly satisfying. It left us hungry for more. We had to be content with two big-city stops: Moscow and Leningrad.

It is all-important to realize that our trip represented a "first." For it was the first time that a group of Americans had gone to Russia as professionals in the civil defense field with the obvious intent of finding out what they could about Russian civil defense. We expected—at least on the subject of civil defense—a lot of silence and evasion. That's not what we got.

The big surprise, the immediate surprise, was the people They not only looked and acted like Americans, but they were frank and agreeable in their manners and conversation and in answering questions. Even at an official briefing held for us at Friendship House the two men and one woman representing the Soviet Government took the same refreshing attitude. Questions were fielded with a candor that amazed and delighted us.

For instance, we were informed that the Soviet civil defense budget is around one billion rubles—1.35 billion dollars. This was somewhat more than the conservative American estimates we had been hearing for several years.

Subways were deep, very deep—200 to 300 feet—and tiered on three levels. Blast doors were easy to spot. Of course they are shelters, the Russians told us. They were shelters back in World War II during the German invasion. Why not? Shelters protect people, protect resources. Civil defense is basic and natural—a humane necessity. How can it be any other way? Why don't Americans understand this? Puzzling, these Americans.

Russians must not be compared to Americans. "We are a different type of people," they said, "and we have a radically different kind of history." They are intensely proud of 60 years of progress under Communism, and they compare their well-being today with their misery under the heel of the Tsars. And with their pride goes a fiery determination. They point to the fact that they lost 20,000,000 people in World War II. "We want peace because we know first-hand the utter tragedy of war," they say. But it is a Communist peace they want.

Communism must spread throughout the world—peacefully.

In a crisis, they point out, well-trained cadres would implement the national civil defense plan. And civil defense, controlled and commanded by the Soviet military, would work because it is organized and tested from the top right down to the industrial and neighborhood grass roots.

There was physical evidence of civil defense planning, and this included a dispersion of factories. No large factories were to be found in the central urban areas. There was much construction in progress—both apartment buildings and commercial plants—all in a dispersed pattern. Cars were few, but mass transportation—which the Russians count on as a primary tool in evacuation—was impressive.

Younger people were especially warm, and eager for information on life outside the Soviet Union.

But all this friendliness suddenly cooled when President Carter spoke of human rights in his United Nations address and when Brezhnev replied in harsh terms. A curtain came down. Fortunately, our five days were almost up.

Although our movements were not restricted, our travel was, and our transportation between stops took place mainly at night. And although our visit was brutally short we had really accomplished our mission of evaluating Russian civil defense on the spot. This was amazing. No one had expected it.

And what the Russian people had to say was almost like taking a few pages out of Leon Goure's controversial book, *War Survival in Soviet Strategy—USSR Civil Defense*. The Soviet people—unlike the Soviet press—corroborated Goure in everything they said.

In reflecting on this and on Russian behavior I couldn't help thinking of a definition laid down by an American writer: "A Russian," he said, "is only an American who hasn't yet learned to speak English."

Goure's five-star credibility was also bolstered by a U.S. Embassy spokesman in Moscow. When we asked him what Soviet civil defense was really like he answered: "All the facts are in Goure's book."

Those American leaders who still labor under the delusion that the Soviets are not 110% serious about civil defense ought to get the same kind of breath-taking eye-opener we got. It could only result in erasing all doubts.

Our experience must contribute to convincing our government that Americans too deserve the kind of consideration and protection that Russians and others are getting.

Otherwise we throw in the towel. And I don't think we are ready for that or that anyone really wants it.
